## Factful Advertising

People are interested in merchandise and like to read about it.

The advertising that attracts them and holds their interest is "full of facts."

It is terse, to the point, well written, but above all else it gives information.

People want to be shown.

Even if they are not personally interested in the goods advertised they regard the advertising as useful information.

There is no better type of clean, factful advertising anywhere than the examples to be found each day in the columns of The Times.
