

The Problem of Graveled Roads

ETHER N.Y. DAVIS, Superintendent of Communications of the Nampa Highway District, Canyon County, Idaho, has solved the problem of graveling the highway at moderate cost. Three years ago he decided to gravel the district's share of the highway between Nampa and Caldwell. A half mile away, another road runs parallel with this highway and there an abundant supply of gravel was present. Fortunately the very heavy traffic incident to heating rails and iron for the transcontinental electric line took out through the ground, making the underlying soil wet and the superimposed gravel in sufficient proportion for cementing it firmly enough to stand. A few inches of clay or organic soil mixed with gravel makes a hard, smooth surface lasting at least a year.

The result on the laid-over has been to cause a very serviceable roadway, commended by local and United States engineers.

Under the inspiration of this successful method a neighborhood living in the west, called Decatur Avenue, decided to pass on the following plan: The farmers to furnish the use of teams and wagons with dump boxes.

Nampa Highway Methods.

The Nampa Highway district is gravelly gravel, mainly donated by those who have it, given the subsoil and a man to help dump the loads and also spread and smooth the gravel on the roadway, using for this purpose a King drag. The teamsters engaged should be encouraged with a King drag or other implement weekly for two months or until settled and commended with the underlying soil. Four inches of gravel in the middle of the roadway with two inches on the sides will in such proportion as to shed rain and form a smooth solid bed. Heavy rains come through the gravel in wet weather until enough underlying soil has been mixed and cemented with the gravel to shed rain and create a solid roadway.

A moderate percentage of clay soil

mixed with the gravel as applied will mix and cement from the beginning. The clay gravel banks along the reclamation ditch piled by the dredges supply ideal material for graveling our roads. This mixture of clay, sand and gravel packs from the very first and does not need underlying soil cut in by heavy traffic.

Admixtures Needed.

Clean gravel, free from clay or soil, will need an admixture of soil from below to secure a hard, smooth roadway. Orchard Avenue has now been gravelled two years. Its success from the start has been such as to attract the attention of other neighborhoods. This Fall the Lone Star and Midway districts have been gravelled and other lines will soon be completed to the extent of 13 miles of gravelled roads in this neighborhood.

The Midway district, one and one-half miles, 400 rods, required 800 yards of gravel and 16 hours to apply. The gravel was hauled from 30 to 40 rods. On December 5, eight shovellers and 15 teams hauled 270 yards, covering 125 rods of road at a cost of 14½ cents each and a rod over \$1½ cents, making the total cost of 800 rods one-fourth miles \$207 or \$16.50 the mile.

On the Lone Star road the gravel was hauled from three-fourths of a mile to the length of the gravelled road, some three miles. The number of loads was 1849 or 660 loads to the mile, at a total cost of \$776.59. Each load over 40 cents or \$258.59 the mile. To this must be added \$10 the mile for work the next two months with teams and King drag smoothing the surface.

Ancient Grasshoppers.

Recent explorations near Cook City, Alaska, have revealed a glacier peculiarly filled with grasshoppers, which are supposed to have existed millions of years ago. In July of this year two scientific prospectors, J. C. Witham and Howard Morris, visited the place and found strewn over the

brought to the surface by the receding glacier and already drying in the sun to be wafted away in tiny particles by the wind. Mr. Witham dug ice parts of countless grasshoppers a hole two feet deep into the mass of frozen grasshoppers, reaching a place where the insects were whole, preserved just as they were when they alighted in some cross-country flight, probably ages before the first Norwegians landed on the coast of Greenland. Those who remember the grasshopper invasion in 1875, when a mammoth cloud of insects that blackened the sun swept like a scourge from Montana to Texas and back again, will recollect that the year of 1875 was unusually mild. The theory that eggs of the grasshoppers laid in the glacier before the original horde was frozen might have gained the surface, thawed and hatched, is held to be feasible. Experiments have proven that grasshopper eggs may remain frozen for an indefinite time and still remain fertile.

As a tribute which the lavish land may send
To keep the Storm King's host,
Of which the northlands boast,
From the mellow clime where Summers never end.

And the hymn that labor sings
Is the chant of joy that springs
From the blessings of a fat and pregnant soil;
For there's not a dell nor plain
But yields up the joyous grain
When awakened by the magic touch
of Toll;

Where the people wait to meet
With their outstretched hands to greet,
And a welcome that no snowy chill
may spoil.

And the roar of whirling steel
Bursts amid the crack and peal
In the factories that art has set alive,
And the deep and mighty ships
Gently glide into their slips,
With the cargoes of the nations, as
all strive
To send the finest wares
That the hand of commerce bears
To the land where labor, love and
capital may thrive.

There's a welcome for the world
Where the valleys broad are curled
Through the land of endless Summer
in the West;
Where eternal sunbeams play
Mid the golden boughs that sway
As the zephyr whispers songs you love
the best,
While the mountains rise snow-crowned
'Neath a sky that's seldom frowned!
Come, this Winter—you are welcome
with the rest!

—Gordon Bay Young, in Midwinter Number, Los Angeles Times.

About 400,000 automobiles are turned out each year by factories located at Detroit, Mich., while the total value of automobiles and automobile supplies produced annually in that city amounts to over \$650,000,000. These factories give employment to 120,000 men and have a weekly pay roll of over \$1,500,000.
