SMALL WATER PIPES

Practically all complaints of poor water pressure are due to small and poorly placed water pipe in the house or building. Do you know that the flow of water through 3/4-inch pipe more than 2 1/2 times that flowing through 1/2-inch pipe and at the cost for the larger pipe is only about 30 per cent more? You have poor pressure at one faucet and good pressure at other, you may be sure the house piping is at fault. Insist on your plumber using 3/4-inch galvanized standard light pipe, or larger, in your next plumbing work. See that water pipe caps and fittings are roamed free from all burrs and all shut-off rocks are full roundness. Have a roadway stop waste rock at some convenient point so that you can shut off entire water supply at any time.
