AS GOOD AS A CHEW OF "SPEAR HEAD"

That Means the Supreme Degree of Rich, Luscious Tobacco Flavor

NO OTHER CHEW EQUALS IT

Nature varies the flavor she puts into the different grades of tobacco leaf—and the best of all is the flavor of choice red Burley that pleases you so mightily when you chew Spear Head. The delicious fruity flavor of a chew of Spear Head is a revelation to the man who has never chewed or who has been chewing near-good tobacco.

For chewing is the one way to get all the wholesome, healthful, appetizing flavor of the tobacco leaf—providing you chew a high-grade plug like Spear Head.

No other tobacco can compare with Spear Head in the wholesome satisfaction it gives.

You get more savory sweetness in a chew of Spear Head than in a whole plug of ordinary tobacco.

And you get it in its purest form—Spear Head is made amid the most wholesome surroundings, in a great, new factory that's kept absolutely clean and sanitary.

Try this rich, mellow, satisfying, pure chew. Such a chew cannot be obtained in any other tobacco than Spear Head. In 10¢ cuts, wrapped in wax paper.

WHO'S WHO? WHAT'S WHAT?

What is the best article to buy for a particular need?

Where is the best place to buy it?

What is the right price?

The answer to these questions means much to your happiness.

To answer them rightly you must know men and markets and must be able to compare intelligently.

Perhaps the very information you want is in the advertising columns of the Times.

They are the day-by-day directories of who's who and what's what.

Plan Your Back Yard Garden On Paper.

(Special to the Times.)
WASHINGTON, D. C., March 15.—"Plan your back-yard garden on paper in advance," is the advice of the vegetable garden specialists of the U. S. Department of Agriculture. A little indoor gardening of this sort will enable you to have fresh vegetables throughout the season and will make the same ground, with little labor and expense, yield two or three crops instead of the single crop commonly raised in small gardens. Where two or three crops are grown instead of one, a comparatively small garden will supply the average family with fresh vegetables all season. Moreover, such planning in advance will enable you to get the ground ready in time for planting and to secure your seeds and plant them at the dates which give each variety its best growing conditions. For example, if you will thus plan the plot to be devoted to peas, by the time your first crop is harvested, the second crop will be in bearing, and the plants of the third well advanced.

All the tools that are necessary for indoor gardening, which can be made an interesting recreation for the whole household, are a large sheet of wrapping paper, a ruler and a pencil. After looking over the garden and selecting the plot of soil best suited for your purpose, measure this and outline it on paper on a scale of one-fourth or one-eighth inch to the foot. Next, study your garden bulletins or books on horticulture and the seed catalogues to determine what can be grown in your climate under the conditions of exposure, soil and drainage in your back yard. This study may lead you to plan ditches to improve drainage, show you that your soil needs finely sifted ashes to break up its sticky character, or that you must add rotted manure, dried blood, bone meal, wood ashes, lime, or other fertilizers to make it suitable for vegetables.

The family consultation. Then comes the consultation of the family to determine the sort of vegetables the different members like, and which, therefore, they will be personally interested in raising. Confine your selections to the standard, well-tried sorts. Finally, and this is most important, is the conference between the garden force and the housewife as to what vegetables really are worth raising

in the back yard. It will hardly pay to raise in a small space potatoes, corn, cucumbers, squashes or melons, which occupy a large area in proportion to yield, and which can be bought cheaply in nearby markets.

In general, the aim of the back-yard gardener should be to raise those vegetables which are either expensive or in which flavor or quality depends importantly on absolute freshness. Peas and string or lima beans, to be at their best, should be cooked almost immediately after they are gathered. Peas kept even for a day lose their delicate bloom and sweetness. Consequently as much space as possible should be devoted to such vegetables, and other vegetables in which freshness does not count so importantly should largely be used as fillers to keep the ground at work. Effort also should be made in a garden to have special vegetables, such as okra, of which the family is fond and which are difficult to obtain in local markets or are commonly high priced. The housewife probably will want a little bed of parsley, chives, or other herbs, not because they are expensive to buy, but because of the convenience of being able to pick a sprig just when it is needed.

Interesting the children. The profit from gardening, however, comes not alone from the vegetables that are produced. The healthy outdoor recreation and exercise and the educational value of a garden in training children manually, and in inculcating in them habits of order and industry must not be overlooked. Fathers and mothers will find that the preliminary planning of a garden will do much to arouse the interest of the young people and encourage them to do their share in cultivating and weeding it. This will be particularly true if the owner hires a laborer to do the first heavy spading and lets the family begin its gardening not with heavy, disheartening drudgery, but on a patch ready for the lighter work of making the seed bed.

Having decided what is to be planted the indoor gardener draws lines or symbols on his outlined plan to indicate the different crops, inserting the date when each is to be planted. Where a second or third crop is to follow the same row or occupy the same ground, this may be written in red or blue, which

indicates that it is to be planted when an earlier crop is over. In laying out the plan the owner should consider the amount of each vegetable necessary for a serving for his family. He also should bear in mind the habits of the plants so as to allow space enough between the rows for their proper growth, for the interplanting of later crops, and for easy cultivation. The cultivation, of course, is easiest when the rows are one and a half to two feet apart, as this permits the use of wheel cultivators. Plants which make a high growth and cause heavy shade naturally should not be located where they will interfere with sun-loving small plants. Perennials, such as rhubarb and asparagus, which are not cultivated, should be grown among plants which call for tilling. The planning may be extended also to the fruits, such as currants, raspberries, and grapes and even to the location of apple or other fruit trees.

Plots For Little Folks.

Where there are very small children in the family, a separate small plot should be set aside for their play gardens. If they have their own vegetables which they are free to pull up, examine, or treat as they like, they are less liable to conduct their juvenile botanical experiments in the garden which is being grown for serious purposes.

Typical Plan For Back-Yard Garden.

An unusually well-arranged and successful garden was grown in a city back yard 25x70 feet in dimensions. The same plan also can be used in laying out a plot of a larger yard or, with changes in quantity planted, can be adapted to small yards or plots of other shapes.

This lot is bounded on two sides by a board fence six feet high, along which fourteen grapevines were planted and trained. Another grapevine was so planted as to grow on the shed at the rear. On either side of the flagstone walk strawberry plants were set. Between the currant bushes and the row of strawberries, were grown low-growing vegetables such as beans, peppers, eggplants and the like. The rear consisted of rows of radishes, early beets, lettuce, carrots, and a few parsnips, parsnips being placed to that they could have the benefits of the entire growing season, while between were placed first rows of radishes and lettuce and later bunch beans. The beets, later in the season, gave way to a few late cabbage plants. An area was devoted to a dozen tomato plants trained to a single stem on stakes about four feet high. These

HOME BEAUTIFIED

A FINE EXAMPLE OF ATTRACTIVE IMPROVEMENT

Home of Mr. and Mrs. John F. Morrissey Cited as Evidence of What May be Done in Marshfield

Editor Times:
The noted landscape artist Levere once stated there are three forms of beautification, that by God, by man and by God and man. Also that there were different degrees of each, according to the active part taken by each principal.

The home of Mr. and Mrs. John F. Morrissey, corner of Tenth and Elrod street, is one of the best examples of the last form, with the work of man holding the predominant position. Mr. and Mrs. Morrissey own 50 feet facing on Elrod and 100 feet on Tenth street, every inch of which is improved or in the state of improvement. There are two houses, one facing Elrod, in which Mr. and Mrs. Morrissey reside, and the other, facing on Tenth street, in which Dr. R. W. Morrow lives.

Each house is an attraction, on account of the state of preservation and attractiveness in which it is kept. The lawns are neat, well graded, flowers grow in good profusion and everything vibrates the feeling of pride, which the owners have. A great many favorable comments have been given and the impression left, especially on strangers visiting our city, has been one of wonderment at the beauty.

But the one feature which makes this case especially noteworthy is the fact that all the artificial improvement has been accomplished by Mr. and Mrs. Morrissey and a visit almost any day or evening will find one or the other or both, adding some form of beautification. A special proof of their thrift and love of beauty was when instead of replacing the worn-out planking on Tenth street with new planking, at an additional cost of \$200 they had it macadamized, thus adding a new feature of beauty.

It would surely pay anyone interested in the beautification of our city, to make a visit to Mr. and Mrs. Morrissey's home and I have no doubt that many good points and ideas could be learned from either, as they are justly proud of their beautiful homes and equal as willing to impart any of their knowledge to anyone desiring it.

—An Admirer.

News of Near-by Towns

MOST OF OREGON LAND NOT UNDER TAXATION

Large Percentage of State's Area Is Not Subject to Assessment, Says Special Report.

EUGENE, Ore., March 15.—Sixty per cent of the total area of Oregon is not subject to taxation, while in Lane county 64.9 per cent of the area is not taxable, according to data received by Ben F. Keeney, county assessor.

Mr. Keeney received two maps, one of which shows the untaxed lands of the state. The other map showed the untaxed areas in each county in the state. It is in the latter map that Lane is accredited with having 64.9 per cent of its total area not subject to taxation.

The total area at present of the state is given as 95,607 square miles. This area is equal to 61,188,480 acres of land. Of this total area, 26,802,621 acres are not taxed, or approximately 60 per cent of the total area of the state.

ROSEBURG VOTES SCHOOL

Bond Issue of \$75,000 for Structure Approved at Election

ROSEBURG, Ore., March 15.—By a vote of 184 to 127, the people of the Roseburg school district decided to issue \$75,000 bonds to erect a modern high school building.

The structure will cost approximately \$100,000, according to present plans. This will be one of the best appointed schools in Oregon. Actual work on the structure will probably begin early in April, in order that it may be completed by the time school opens next fall.

TWO RANCHES SOLD

Farm Property Near Gardiner Brings Good Prices

The Gardiner Courier says: A deal of considerable importance was consummated the first of the week, wherein Clark McAfee disposed of his place on the Umpqua River, of about 49 acres, selling the same to J. A. Black for \$3,000, who in return sold the same property to Ed. Stein, who has been farming on Smith River.

Mrs. Salo, who owns a farm on Deans Creek, has purchased the Hansen place on Butler Creek, consisting of 320 acres of land. The purchase price, we are informed, was \$5,000.

ELECTION AT FLORENCE

Five Candidates File For Municipal Offices There.

Only five nominating petitions have been filed by candidates for the different city officers at the election next month.

C. C. Behnke, C. S. Carlson and Marion Morris are candidates for councilmen—Behnke and Carlson for commissioner in charge of streets and Morris for commissioner in charge of wharves and parks.

Mrs. Belle Severy and George Arnhart are candidates for recorder.—Florence West.

WEATHERLY TO RUN

Scottsburg Man Comes Out for Umpqua Port Commissioner

Fred Weatherly, of Scottsburg, has his petition out for the office of Port Commissioner, wherein one is to be elected at the next general election. J. N. Hedden has declined to become a candidate to succeed himself. Mr. Hedden has made a good and conscientious official and has filled the office with credit and general satisfaction, and we are sorry to see him retire. Mr. Weatherly is a good man for the place, and as Scottsburg is entitled to a commissioner on the board and the people of Scottsburg want him for that position he should receive the unanimous support of all.—Gardiner Courier.
