E.M. Mondays is pleased to offer Portland last Friday and was turned back by an obstruction reported on the Fairmont Road, east of the city.

The next crops grown in this region will be skilled by the Oregon Agricultural Experiment Station at Corvallis, and will give a good measure of the success of the new varieties introduced. This will encourage farmers to try new crops and to continue the use of old ones more effectively. The experiment station's work is of vital importance to the farmers of Oregon as it provides valuable information about the best methods of growing crops.

The station is located near Corvallis, and its work is supported by the state government. It conducts research on a wide range of topics, including soil science, crop production, and pest management. The results of this research are then shared with farmers and other stakeholders through publications, workshops, and other outreach programs. This helps to ensure that Oregon's agricultural industry remains competitive and viable.

In conclusion, the E.M. Mondays offer to provide Portland with the best possible service and efficiency in the current challenging times. With the support of the Oregon Agricultural Experiment Station, farmers in the region can continue to grow high-quality crops that meet the needs of a growing market.
