

A First-Class Market Apple.

Wherever the Baldwin, Northern Spy and similar varieties of apples can be grown successfully, the Fameuse, shown in the illustration, should have a place, for it is one of the most desirable varieties for commercial purposes. In quality it is one of the best, and its attractive skin, highly colored and tender, makes it a sort easy to sell to consumers. The flesh is white, with generally red streaks and of good quality. The trees are productive, come into bearing quite early, and, with proper care, bear consecutive seasons. In season it is a late fall or early winter sort and is a good keeper and a good shipper, if care is used in packing, so that the rather delicate and thin skin is not bruised. All things considered the Fameuse may be class-

THE FAMEUSE APPLE.

ed among the very few really desirable sorts for market use.—Indianapolis News.

How Should a Cow Be Milked?

Opinions differ very much as to the manner in which the operator should proceed in milking a cow. Some contend that the proper plan is to draw the rear fore and the off hind teats simultaneously, and then the off fore and the rear hind teats; while others argue that both the hind teats should be first drawn; and still others contend that the whole of one side of the udder should be drawn ere the other side is touched. We are not aware that there is really very much in either way, but it is suggestive to learn that in an investigation conducted some time ago by Prof. Babcock, the well-known dairy expert, it was found that the order in which the teats were milked exercised considerable influence on the quality of the milk obtained. It was found that the teat that was drawn second in order almost invariably yielded the richest milk; then came the teat that was first milked, and next in order the third and fourth, the last one drawn invariably giving the poorest milk. From these results Prof. Babcock argues that milk is pretty largely formed during the act of milking, and that it does not accumulate to any extent in the ready-made condition of the udder.—American Cultivator.

Subduing Flying Fowls.

When fowls are kept confined they get uneasy and long for freedom; this is particularly the case with the smaller breeds, says an exchange. The common method of prevention is to clip the wings of the birds, not a desirable thing to do if they happen to be high-

HARNES FOR FLYING FOWLS.

class fowls. A better plan is to attach the little arrangement here described. Take a stout cord and tie around the points of the feathers on the wings mainly used in flying. Tie one wing in this manner, then pass the cord over the back and tie the other wing. Be careful not to draw the cord too tight, but leave it so that the fowl can carry the wings in a natural position and it will do no harm, yet the bird will not be able to fly any distance.

Contracted Hoof.

Take off the shoes and apply the following around the coronets: Mix two drams cantharides with one ounce lard. Let it remain on for twenty-four hours, wash off and apply a little lard, then turn the horse out to pasture for a few months.—American Agriculturist.

Care of Lambs.

A lamb once allowed to get poor will not make money for either the grower or feeder. The thrifty lamb is the money maker. A scattering, uneven fleece is indicative of either poor health or very poor care.

As to Fruit Growing.

At the regular meeting of the Western New York Fruit Growers, an association of practical men widely known for ability not only as growers of fruit, but as business men, the suggestion was made that it was time fruit growers got together and employed a salesman in each of the large city markets to represent them in the sale of choice fruits. A city apple dealer threw cold water on the plan by the emphatic statement that "there is not enough first-class fruit put up to make it a standard commodity." Think of such a statement, and it went undisputed because truthful, in a great State honeycombed with cities and large towns. The same state of affairs obtains, beyond doubt, in other States, and yet fruit growers are complaining of the hard work and the poor return for the capital invested.

It is a safe assertion to make that whenever a grower of first-class fruit has made an honest and fair test of marketing his first class product, attractively packed, the returns have much more than paid for any extra labor and material involved. Naturally, it would not pay to attempt to market choice fruit in quantity in a small town, where, perhaps, the majority of the consumers were people of small income. Use intelligence in such marketing, however, and it pays.

Lettuce.

Lettuce is a salad plant, a salable greens, extensively forced in greenhouses during the winter, and in hotbeds and cold frames in early spring. It can be sown from spring till fall, and is remarkable for being able to stand quite severe frosts. Lettuce thrives best in clay loam soil well treated with well-rotted barnyard manure. In early spring the seed is sown in rows a foot apart and thinned to stand about six inches apart in the row. For the very early and very late crops, the loose-growing varieties best for the reason that they mat the quickest. For early summer a fall crop, the larger head lettuces are the finest. In order to have crisp, tender lettuce, the crops must be sown rapidly. To secure a quick growth, the soil must be very rich. Nitrate of soda scattered broadcast along the rows and well raked in, will generally give a quick growth. It can be used at the rate of 200 to 300 pounds to the acre.

Cutting Potatoes for Seed.

In cutting seed potatoes, Farm and Home says, take the potato in the left hand with the stem end toward you. If it is large cut off a good sized piece with two or three eyes. Revolve the potato to the right and keep cutting off about the same size pieces, finishing the potato by splitting the seed end. Cut potatoes as you want to use them and after they are cut never expose to the sun or air to dry out.

If you cannot use them immediately pour out on damp ground in the shade of trees or building and cover with a blanket. Seed the least bit dry comes up slower, blights easily, and yields lighter, just in proportion as it is dried out.

Two Spraying in One.

Recent tests at the Geneva (N. Y.) experiment station suggest that the thorough spraying of scale-infested trees with a sulphur wash may take the place of the first one of the combined treatment with bordeaux mixture and paris green for scale and scab. It is found that the sulphur washes kill many other insects besides the scale and result in considerable benefit to the tree. On the other hand, it was noticed that in spraying old orchards some of the buds were killed on the lower branches by the large quantity of the spray which they received. The effect was to thin the fruit and decrease its number, while improving the size and quality. The lime and sulphur washes proved efficient scale destroyers on all treated trees.—Massachusetts Ploughman.

General Farm Notes.

It is well to mark the eggs on which the hen is placed for hatching purposes.

A dog that worries the fowls should be broken of the habit without delay, for a hen will not do her best while such nuisances exist.

If you find that the young chicks are disappearing, keep an eye on the family cat. It may develop that this animal is doing the damage.

Dampness will cause more troubles in the brood than any other condition in the poultry house. Dry floors are as necessary as proper food.

Agricultural implements to the value of \$2,835,380 were exported from this country during the month of January, 1905, the exports for the same month of 1904 being valued at \$1,987,985.

For the tree lice, the New Hampshire Station successfully dips the infested twigs of young trees in a weak solution of tree soap. Probably kerosene emulsion would answer the same purpose.

Pale, Thin, Nervous?

Then your blood must be in a very bad condition. You certainly know what to take, then take it—Ayer's Sarsaparilla. If you doubt, then consult your doctor. We know what he will say about this grand old family medicine. Sold for over 60 years.

This is the first question your doctor would ask: "Are your bowels regular?" He knows that daily action of the bowels is absolutely essential to recovery. Keep your liver active and your bowels regular by taking laxative doses of Ayer's Pills.

Made by J. C. Ayer & Co., Lowell, Mass. Also manufacturers of
Ayer's HAIR VIGOR, AGUE CURE, CHERRY PECTORAL.

A Life-Saver.

He kissed her hand and then her lips; She bade him go away. Said he: "I live from hand to mouth, So don't be angry, pray." "Oh, well," she said, "if that's the case, I'll let you live to-day."

Effects of Prosperity.

In the six years of the country's greatest prosperity, from 1897 to 1903, average prices of breadstuffs advanced 65 per cent, meats 23.1 per cent, dairy and garden products 50.1 per cent., and clothing 24.1. All these were products of the farmer and stockman, who profited more than any other class of the community by these advances. The miner benefited 42.1 per cent, by that advance in the average price of metals. The only decrease in the average prices of commodities in that period was in railway freight rates, which decreased from .798 per ton-mile in 1897, to .763 in 1903, a loss of 4.4 per cent. The report of the Interstate Commerce commission shows that the average increase in the pay of railroad employees in that period was a trifle above 8.5 per cent.

Key to the Situation.

The sheriff was standing on the corner with a large brass key in his hand. "What's that big key for?" asked the inquisitive person. "That," answered the sheriff, "is the key to a clock factory. The proprietor let the business run down and I've got to wind it up. See?"

For forty years Piso's Cure for Consumption has cured coughs and colds. At druggists. Price 25 cents.

Two Exceptions.

"They say that all the world loves a lover," said the rejected suitor as he ate his dinner from the mantelpiece, "but there are generally two exceptions to the rule, the girl you want to be your wife and the man you want to be your father-in-law."—Princeton Tiger.

Good Advice.

Sylvia—I'm invited to the Upperton's ball next week, but I really can't decide what to wear. What would you advise? Phyllis—Well, dear, if I had your complexion I'd wear the thickest veil I could find.

FITS Permanently Cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. Send for Free \$2 trial bottle and treatise. Dr. R. H. Kline, Ltd., 931 Arch St., Philadelphia, Pa.

Edible Snails.

Daughter—The paper says that edible snails are advertised in English restaurants.

Old Lady—Land snakes! Who'd ever 'a' thought that edible snails were fit to eat.

You Can Get Allen's Foot-Ease FREE.

Write Allen S. Olmsted, Le Roy, N. Y., for a free sample of Allen's Foot-Ease. It cures sweating, hot swollen, aching feet. It makes new or tight shoes easy. A certain cure for corns, ingrown nails and bunions. All druggists sell it. 25c. Don't accept any substitute.

Out of the Ordinary.

Miffes—What do you think of Knox as a pugilist?

Biffson—I don't believe he's the real thing.

Miffes—Why not?

Biffson—Because he says he isn't going to try to elevate the stage.

Mother will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

Another Point of View.

Hyker—As Shakespeare says: "Jesters do often prove prophets."

Pyker—Yes, and he might have truthfully added that prophets often prove jesters—especially political and weather prophets.

ST. HELEN'S HALL

A GIRL'S SCHOOL OF THE HIGHEST CLASS corps of teachers, location, building, equipment—the best. Send for catalogue.

Term Opens September 15, 1904

Dept. 12 Portland, Oregon

W. L. DOUGLAS

SHOES \$3.50

W. L. DOUGLAS MAKES AND SELLERS MORE MEN'S \$3.50 SHOES THAN ANY OTHER MANUFACTURER IN THE WORLD. \$10,000 REWARD to any one who can improve this statement.

W. L. Douglas \$3.50 shoes are the greatest sellers in the world because of their excellent style, easy fitting and superior wearing qualities. They are just as good as those that cost from \$5.00 to \$7.00. The only difference is the price. W. L. Douglas \$3.50 shoes cost more to make, hold their shape better, wear longer, and are of greater value than any other \$3.50 shoe on the market today. W. L. Douglas guarantees their value by stamping his name and price on the bottom of each shoe. Look for it. Take no substitutes. W. L. Douglas \$3.50 shoes are sold through his own retail stores in the principal cities, and by shoe dealers everywhere. No matter where you live, W. L. Douglas shoes are within your reach.

"The Best I Ever Wore."
"I write to say that I have worn your \$3.50 shoes for the past few years, and find them the best I ever wore."—Rev. Frank E. Roper, 608 East Jefferson St., Louisville, Ky.

Boys wear W. L. Douglas \$2.50 and \$2.00 shoes because they fit better, hold their shape and wear longer than other makes.

W. L. Douglas uses Corona Calfskin for his \$3.50 shoes. Corona Calf is conceded to be the finest patent leather produced.

Fast Color Eyelets will not wear brassy. W. L. Douglas has the largest shoe mail order business in the world. No trouble to get a fit by mail. 25 cents extra prepay delivery. If you desire further information, write for Illustrated Catalogue of Spring Styles.

W. L. DOUGLAS, Brockton, Mass.

PUTNAM FADELESS DYES

Color more goods brighter and faster colors than any other dye. One 10c package colors silk, wool and cotton equally well and is guaranteed to give perfect results. Ask dealer, or we will send post paid at 10c a package. Write for free booklet how to dye, bleach and mix colors. MONROE DRUG CO., Unionville, Missouri.
