

Knees Became Stiff

Five Years of Severe Rheumatism
The cure of Henry J. Goldstein, 14 Barton Street, Boston, Mass., is another victory by Hood's Sarsaparilla. This great medicine has succeeded in many cases where others have utterly failed. Mr. Goldstein says: "I suffered from rheumatism five years, it kept me from business and caused excruciating pain. My knees would become as stiff as steel. I tried many medicines without relief, then took Hood's Sarsaparilla, soon felt much better, and now consider myself entirely cured. I recommend Hood's." Get it today in usual liquid form or chocolate tablets called **Sarsatabs**.

Had Approval of Clerk.
An Atchison business man, who has a small store, recently hired a clerk who was very shiftless. He didn't half attend to his duties. "I think I'll have to hire another clerk," said the business man. "You ought to," was the reply, "there's too much work here for just one clerk."

Paper Plates for Animal Pets.
Using paper plates for animal pets will be found to be a good plan. Some people do not take the care to wash plates kept for dogs and cats, although they should be kept scrupulously clean and be used for no other purpose. Paper plates, which may be bought by the hundred for but little money, may be burned after they have been used. It is also a good idea to have a piece of zinc put on the back porch, where the pets are likely to be fed, and place the dishes on this for them. The zinc is easily cleaned.

Regular Habits.
It is a good plan to have a regular time for reading. One accomplishes so much more in this way, and besides establishes a kind of intellectual habit that is a good thing in itself. In an hour, or even half an hour given regularly each day to reading, a great deal may be accomplished. Do not confine yourself to serious books. Alternate light with heavy reading, and do not attempt heavy reading when you are tired. Do not read merely to be amused. Treat your books as a friend. Do not follow blindly the teachings of any book.

Truth Repeated.
"No man is truly great," says a philosopher, "unless he is able to convince his neighbors that he is." That may be true. Anyway, a man's neighbors are the last to discover that he is great.

That Held 'Em.

GRASS SEEDS FOR PASTURE

Use Mixture of Varieties Best Suited for Soil, Making Dense Herbage and Succession of Feed.

In sowing grass seed for pasture, it is far better to use a mixture of those varieties best suited to the soil and climate, as this makes a dense herbage and affords a constant succession of fresh, tender, green feed than when only one or two kinds of seed are sown. Fluit, in his practical work on "Grasses and Forage Plants," says: "For a permanent pasture mixture it is highly important to bear in mind that such species should be selected as blossom at different periods in order to secure, as far as possible, a luxuriant growth through the season; and some grasses may be used which are valuable mainly for their nutritive value than in mixtures for field culture." For such a mixture, we might select the following as an example:

Meadow fescue, flowering in May and June, two pounds; orchard grass, flowering in May and June, six pounds; sweet-scented vernal, flowering in April and May, one pound; meadow fescue, flowering in May and June, two pounds; red top, flowering in June and July, two pounds; Kentucky blue grass, flowering in May and June, four pounds; Italian rye grass, flowering in June, four pounds; perennial rye grass, flowering in July, three pounds; rough-stalked meadow, flowering in July, two pounds; perennial clover, flowering in July, three pounds, and white clover, flowering in May to September, five pounds; making 40 pounds in all.

This will be the right quantity to sow to the acre to obtain a thick sod that under good treatment will furnish a luxuriant growth throughout the season--and for a number of years.

River bottom land, properly prepared and seeded, can be kept in sod for many years. A dressing of raw-bone meal and wood ashes should be given every third year to keep up fertility. When bare spots are noticed cut the sod up with a sharp steel-toothed harrow and reseed. A rich pasture will furnish an abundance of food and at the least cost.

ERADICATE SAN JOSE SCALE

Horticulturist Tells How to Recognize Destructive Little Insect and How to Destroy it.

Perhaps the worst feature of an attack of San Jose scale is that, owing to its small size and inconspicuous color, it often remains unnoticed until the tree has been seriously injured or even killed. That the tree lacks vigor may be recognized, but the cause of its unthriftness is overlooked. Yet it is not difficult to detect when one really looks for it. In the early stages of infestation a few scales may be found, usually clustered about the buds of the preceding season's growth, or even on two-year-old wood. The mature scales are grayish in color, being usually, but not always, somewhat lighter than the bark to which they are so closely attached.

The mature females are nearly circular in shape, are approximately one-sixteenth of an inch in diameter and each is somewhat raised in the center to form a slight protuberance or nipple, which is lighter in color than the rest of its scale. If this scale is carefully examined by means of a small magnifier, several concentric circles may be observed between the nipple and the outer edge, and if it be carefully raised with the point of a pin or knife there will be revealed a minute yellow object, the insect itself. By spraying with Bordeaux mixture when trees are dormant in the early winter and with copper sulphate solution before the buds swell, and a second application of the Bordeaux mixture as soon as the blossoms fall, the scale may be destroyed. The same solution properly used will answer for scab, bitter rot and black rot.

Building Hog Fence.

A very good way is to set posts in the winter and stretch the woven wire on a warm day when the ground is still frozen solid. In this way every post takes up the strain gradually, and though the corner posts must be well set and braced, at the same time they are not so hardly used of a sudden as when newly set. The barbed wire which is necessary on the ground to prevent hogs from rooting under may be stretched when the corner posts are in and used to set the intermediate posts by it desired. At any rate, it should be put on previous to stretching the woven wire.

Poor Cows.

Professor Fraser says that a cow that makes 133 pounds of butter fat a year would make a profit of 77 cents in 365 days, and if a dairyman had 474 such cows he would make a dollar a day. The cow is no rare specimen of her species and many a dairyman is slaying to support a number of such animals and wondering why life is so hard.

For the Hair

Are you so fortunate as to be well satisfied with your hair? Is it long enough, thick enough, rich enough? And your hair does not fall out? Well, well, that is good. But you may know of some not so fortunate. Then just tell them about Ayer's Hair Vigor. They will surely thank you after using it, if not before. Remember, it does not color the hair. Show the list of ingredients to your doctor. Let him decide their value. He knows.

Ingenious Little Invention.
Some college girls invented an ingenious apparatus for boiling a kettle, when they wanted tea instead of a chafing dish concoction. It is made of heavy wire, bent at the ends to rest on the chafing dish frame. A hardware dealer will make it for a few cents. The kettle is set down on the framework, which comes within two inches of the frame.

Marriage Made Easy.
Gretna Green, Scotland, became famous for its celebration of irregular marriages. For many years the average number was five hundred. The ceremony consisted only of an admission, before witnesses, by the couple that they were husband and wife, this being sufficient to constitute a valid marriage. After this the officiating functionary (for many years a blacksmith), together with two witnesses, signed the marriage certificate.
