put size equ lo Ausu HMITN act those who are in a position to udge state that some of the modern examples of native silversmithing on the Navajo reservation are superior in every way to the best examples of earler work of the redskinned craftsnen of the forge.

At the fourth annual fair of Navajo indians, which was held recently, there was a dazzling display of this native silverware, showing the native artists at their best. Probably \$5,000 worth of Navajo jewelry was on exaibition, most of it being made up in purely native designs. The prize colection was the work of Chis-chil-le (Curly Hair), a silversmith who lives near the trading post of Two Gray Hills, fifty miles south of Shiprock, N. M. Chis-chil-le is a middle-aged indian, who has been a silversmith since his youth. In fact his is a family of silversmiths, the trade being handed down from father to son, much as trades are handed down in some European communities.

Chis-chil-le, like other Navajo silversmiths, uses only the crudest implements in making his silverware. His forge is a square of stones and adobe, the center having a round de-pression for a fireplace. The smoke is carried off and a draft created by two wooden tubes, covered with adobe to keep from burning, walled to the rear of the forge. His bellows is made of sheepskin, and his anvil is a hard stone or a piece of iron. Any silversmith who can get a piece of railroad iron is looked upon with envy by his ellow-craftsmen who must use forges of cruder material. The crucibles for melting silver are of hard clay, and are generally about the size of tumblers, with round bottoms, and with curved rims provided with spouts for pouring off the molten metal.

The molds which are used by the

the chasing on some of the Navajo silverware being equal to the better grade of work turned out of highgrade jewelry establishments.

There is no reason to believe that the Navajos learned silversmithing from the early Spaniards, as many people believe. The Spanish explorers were inveterate keepers of diaries and other records. Nothing escaped their observation, and if they had found silversmiths among the Navajo tribeat that time even more warlike than the Apache-there is every reason to believe that some record would have heen made of the fact. It is likely that the craft was learned from the Mexicans at a later era, and it has continued to grow in importance until it rivals the blanket-making industry for which the tribe has become worldfamous.

While the blanket weaving is strictly a woman's occupation among the Navajo people, silversmithing is kept as strictly among the men. A woman silversmith has never been heard of among the Navajos, nor is there any record of a male rug weaver, though among the Hopis and other southwestern tribes, the men do most of the

prefer silver coins, for the reason that POULTRY KEEPING PROFITABLE.

Prof. Dryden of O. A. C. Advises Farmers to Increase Flocks.

Oregon Agricultural College, Corvallis .- "There has been an enormous increase in the production of eggs and poultry in the state in the past two years, but in spite of this the demand has far exceeded the supply, and prices are still as high as ever," said Pro-fessor James Dryden of the Oregon Agricultural College in discussing the object of the present tour of the poul-try demonstration car sent out over the Southern Pacific lines by the col-

lege. "If the farmers of Oregon would elry. These necklaces consist of beads of silver, ranging from the size of a keep, on an average, 100 hens instead pea to globules an inch in diameter. of about 50, it would shut out the imof silver, ranging from the size of a The larger beads are finished with pendant-like projections, cleverly graduated as to size. The larger beads

car is to stimulate a greater production best way is to increase the flocks of the farmers rather than to have poul-try keepers start large egg farms. The demand cannot be met by the estab-lishment of large, exclusively poultry farms. If the general farmer goes out of the egg producing business there will soon be an egg famine—possibly a "Though the state." breast, and generally a very striking of poultry and eggs. The quickest and

"Though there are opportunities for profit along special lines in poultry-keeping, the market for specialties is limited, and it would be folly to advise everyone to go into special lines. I am free to confess that we have kept more people out of the poultry business than have gone into it as an exclusive business. I have received great numbers of letters during the past year from all parts of the state as well as from other states, in which two, sometimes four or five inches the writers stated that they were going into the poultry business on a large scale, and a large majority of them said they knew nothing of the busi-ness. Our plain duty was to advise caution. If every one of them had gone into the business as they intended and invested their all in it, it is safe to say that there would have been These, with the inevitable Navaj thousands of dollars lost in every counblanket, about his shoulders, go a ty of the state, and the poultry busilong way toward making the Navaje ness would have received a black eye.

"Poultry keeping is not a difficult business unless we make it so. If conducted along sane, common-sense lines, there is profit in it. The two points on which special emphasis is laid in the demonstration car are feeding for eggs and housing. Egg rations are on display, feeding charts show results of experiments, breeding charts show results of breeding for eggs, different grades and qualities of eggs are exhibited, marketing possibilities are demonstrated, and the equipment for successful hatching and brooding of chicks is displayed. The walls of the car are covered with signs and charts containing lessons in practical poultry keeping. A 'knock down' colony house is taken along and set up outside the car at each stop.

"While chickens may be made to do well in different houses, it may be said in favor of the colony system and free range that there is no noted poultry district in the United States where poultry-keeping has been permanently successful, where the celony house system was not followed. The colony house, moreover, was the house used at the Oregon Experiment Station last year for the hens that made the highest egg records ever made in the Unit ed States so far as official or authentic "Great reverses occur in political as record is concerned. The demonstrawell as in other walks of life, and it is tors on the car explain how those hens somewhat remarkable that, after thir ty years, the man then occupying such any questions as to their feeding and

native silversmiths are generally cut put of hard sandstone, and are greased with mutton tallow. Charcoal is used tor fuel, the Indians being very clever at making it from juniper logs. Genscally the smith's blowpipe is a piece of hollow brass tubing. For polishing he uses sandstone and ashes, and for thasing and engraving unique designs on the silverware he uses nothing more than pocketknives, awls and small files.

With such implements the Navajo silversmith has been working for the last sixty years, there being no record of silversmithing in the tribe previous to that date. The Indians do not care for more elaborate implements but cling to the tools with which they have been familiar for years. The effects they secure with these crude implements are nothing short of amazing,

upon the sultan as the spiritual head of their religion on earth. This has the effect on the mind of the Turk of inspiring the belief that in serving his sultan he is serving his God. There is certainly one advantage in their religion, in that it maintains absolute sobriety. The use of liquor is abhorrent to the Mohammedan, and results in their army being an absolutely temperate organization. The personnel of their army is made up of strong men. and their military establishment is

conducted with great economy. "I had an audience with the sultan and was cordially received by the high officials of the Turkish army. DRY FARMING ALFALFA. his brother was at the time, and his

Prof. Scudder Sees Big Possibilities in Alfalfa Seed.

Oregon Agricultural College, Corvallis.—The growing of alfalfa on the dry farming lands of Oregon in culti-vated rows for the production of seed has been the special dry farming hob-by of Prof. H. D. Scudder of the Ore-gon Agricultural College. He has ad-vocated this plan widely through Eastvocated this plan widely through East-ern Oregon for the past five years, and is beginning to see practical results on a large scale. A prominent wheat farmer at Arlington has planned to put in 160 acres of alfalfa on his dry land, and has asked the agronomy de-partment of the college for special in-struction and for the best pred struction and for the best seed. An-other man, one of the largest wheat farmers in Gilliam county, is to put in 1,000 acres of alfalfa this spring. The great number of letters coming to Prof. Soudder from all parts of Eastern and Central Oregon on this subject indicates the first great change for the better in dry farming agriculture there.

FARMERS TRY NEW CROPS.

Agronomy Department, O. A. C., Examines Ranches and Advises.

Oregon Agricultural College, Corvallis.—Dry farming lands throughout Eastern Oregon are now taking up special tillage methods and trying new crops suggested by Prof. H. V. Scudder and the other authorities of the O. A. C. Experiment Station. A recent trip he made showed, on five large ranches, this generous offer 10 to 40 acres each of corn, field peas and alfalfa seeded on each ranch, the corn being the Minnesota No. 23 de-ham Medicine Co spiracy against the young man, yet I am sure that he could not understand it." veloped at the experiment station. Im-portant changes are being made in the method of growing the regular wheat crop, and the ranches will set the example of progressive methods to their neighbors. A Gilliam county farmer recently came to the college to consult with the authorities, and has decided in consequence to put 1,000 acres of his wheat land into alfalfa, though the obtainable by mail. "Railways" and "Railroads."

We are all speaking of "railways" now instead of "railroads," as they do in America. Both words seem to be of about equal age in this country. Cobbett, in 1832, wrote of "rail-ways" with the hyphen. Scott, in 1831, of "railroads." But already in 1838 an engineering journal declared that "railway" by this time seemed to be generally adopted as the popular form. though nearly 20 years later Ruskin still talked of "railroads." It is curious that America has preserved the word which recalls the descent of the railway from the old road, while Americans speak of "engineers" and "conductors," where we say "drivers" and "guards," perpetuating the old coaching words .- London Chronicle.

Parisians Evidently Honest.

An astute rogue who hoped to make his fortune by speculating on the petty dishonesty sometimes latent in these should be carved out of marble otherwise respectable people has had an upprofitable experience in Paris. The swindler haunted the streets in the neighborhood of the opera, which parent, and so the terra cotta was swarm with work-girls during the adouted.

luncheon hour, and dropped here and there envelopes bearing an Orleans address. In each envelope was a note asking a "friend" to redeem for \$4.50 at an address he gave a gold purse value \$53. Instead of the expected haul the swindler found to his disgust that almost all the letters were sent on to him by the finders, while none had attempted to obtain the purse.

Big Saving on State Building.

In the erection of the building for the state educational department at Albany, N. Y., a saving of more than \$500,000 was effected by the use of terra cotta without in the least sacrificing the appearance of the structure. The greatest item was in the capitals for the columns surrounding the building. There are twenty-eight of these, and the "caps" are about twelve feet

high. It was at first intended that to match the remainder of the facade, but it was discovered that the substitution could be made without being apThe Irony of Street Cars.

"There are queer people in this New York city of yours," said a visi-tor. "The other evening I was on a Broadway car and near the front door sat a young man. It was chilly and wet, and the young man was not com-fortable, it was plain. He became more uncomfortable every minute some one went out the front door, for it was always left open. Each time he got up and slammed the door and became more peevish.

"He had done this a dozen times or more when he found a seat in the middle of the car. Then to his astonishment every person who went out that front door carefully closed it after There was no reason to behim. lieve that there was a general con-

Brief. "He made a great hit with his after dinner speech." "What did he say?" "'Excuse me.'
