# GOOD AND INEXPENSIVE DAIRY BUILDINGS

Side View of Inexpensive Dairy House.

ment of Agriculture.)

The department of agriculture as the result of a great demand for inof dairy buildings started a line of investigation through its dairy specialists for the purpose of developing the basic principles of such construction. In order to make the work thoroughly practical, these studies were extended to the planning and actual supervision of construction of a number of dairy buildings in different sections of the country. Few localities will require or even permit of the same treatment far as exposure, size, form, or building material are considered, but the problem of light, floors, ceilings, etc., are nearly alike in all cases. Stable for 24 Cows.

The plan shown is designed for 24 cows, and allows ample room for calf pen and box stalls for bull and cows, also space for feed room, hay chute, poses will meet the usual requirements. The arrangement of the space can be adapted to the needs of the particular location.

"In that case," replied he, "you had Special Features Common to All Well-

Planned Barns. The width of this barn is 31 feet 4 inches outside. This allows ample room for the stalls and passageways. While the length here shown is 73 feet 6 inches, this depends on the number of cows to be handled. The side wills are built of brick or concrete up to the window sills, the balance of the walls being frame. The end walls are constructed of brick or concrete up to the ceiling. A parti-"You go back home," answered the tion extends across the barn so that

> Windows. One of the faulty points in ordinary barn construction is the small amount of window space usually allowed. This plan provides approximately 6 square feet for each cow. It will be noted from the elevation that the windows are sliding sash extending to the celling, making them nearly twice as high as they are wide. This arrangement will admit much more light than the same space if the windows were

> placed otherwise. Manger. The manger is planned to be 2 feet wide and 6 inches deep, with slightly floor of the stalls,

(Prepared by the United States Depart- | be allowed. The depth is indicated as 4 feet 6 inches, but this may be varied according to the size of the cows in the herd. The manure gutformation relating to the construction | ter is 14 inches wide and 6 inches deep.

> Floor. The entire floor is concrete, inches in depth when finished, laid over at least 6 inches of cinders or broken rock. Concrete is considered broken rock. Concrete is considered the best material for several reasons:
>
> (1) it is sanitary; (2) it is economistical because of its durability; (3) when the first form of the feet. It cures painful, swellen, smarting, sweating feet. Makes new shoes easy. Sold by all Druggists and Shoe call because of its durability; (3) when the first form of the feet. It cures new shoes easy. Sold by all Druggists and Shoe call because of its durability; (3) when the first form of the feet. It cures new shoes easy. Sold by all Druggists and Shoe call because of its durability; (3) when the first form of the feet. It cures are shoen to be a first form a reasonable amount of bedding is used it is comfortable to the animals and no bad effects result. The floor is intended to be raised about one foot above the level of the gorund to

The alleys behind the cows are feet wide. Manure should be taken away from the barn daily and deposited in a manure shed or on the field and the alleys are designed with this in view. It is undesirable, from the standpoint of construction and san tation, to have a manure pit under th stable.

insure drainage.

Calf Pen. A comfortable calf pen should b provided, effectively separated from the milking herd. The one shown 21 by 11 feet. Individual stauchios are provided for feeding calves gra-Bull Pen and Box Stalls.

These are approximately 10 by feet. There is a full window in enc stall, providing an abundance c light.

Feed Room. This is centrally located; two gralchutes from the upper floor. A ha chute from the loft above deposits th hay conveniently to the feeding alley

Watering. Watering devices may be put i the stable or provided for outside the option of the builder.

Storage of Feed. There is no objection to storage above the cow stable proper so lon as the floor is similar in construction to the one in the drawing, so as to be kept perfectly tight.

Celling. In colder climates it is deemed bet ter to have a comparatively low ceil ing on account of temperature, and this construction admits of changes in this respect.

Ventilation. The plan adapts itself to any sys tem of ventilation. The openings shown give suggestions as to where The width of stalls is 3 feet 6 the fresh air may be taken in and

inches, which is as narrow as should the impure air discharged.

Very Rank Growth on One Acre May Supply Feed for Twenty-Five Head wheat is Too Fattening.

pasture for 10 to 20 hogs to the acre A very rank growth may supply feed for 25 head. Where the feeding is to extend from 10 to 14 weeks it is advisable to pasture rape at the rate of 10 to 12 head to the acre.

The favorable time for seeding rape is in the spring as soon as danger of hard freezing is past. It will furnish **A Puzzling Question** pasture from the middle of May until the third week in August. Rape will withstand light frosts, but not hard freezing. The best results are ob-The Searching Power of a Great Remedy Answers with it. Sow from five to seven pounds of rape ahead of the drill and then drill in one-half bushel of oats and six to ten pounds of clover seed to the acre. The rape and oats will serve as a cover crop for the clover and usually a good stand of clover will be obtained that may be pastured with hogs the following year.

If rape is not grazed too closely in June and July, so that the stalk of the plant is eaten off, it may grow up and make fall pasture. It should never be pastured so closely as to destroy all leaves on the stalk, and stock should not be turned on until the plants are from 14 to 18 inches high.

Complaint is sometimes made by feeders, that scabs and cores form on the ears and backs of the hogs on rape. The remedy is to move the hogs to another pasture for a short time and then dip them or apply sulphur and lard to the sores.

Cream Check Is Dependable. Chinch bugs may take the wheat

RAPE PASTURE FOR THE HOGS | PLACE FOR HEN TO SCRATCH

Oat Straw Found to Be as Cheap as Anything Else in Long Run-Buck-

There are a number of different materials which furnish an excellent place for the hens to scratch in, says writer in the Poultry Journal. Leaves are probably the stuff most used by the small poultrymen. These are good if gathered when perfectly dry. They must be put into the pens every few days, because the poultry will break them into dust by their continual scratching. I find out straw about as cheap in the long run, because it lasts quite a while and furnishes some feed if fed before thresh

Some of my neighbors have tried feeding buckwheat as a scratching material and a feed combined. Buck wheat is too fattening and should be used only occasionally. Corn husks make an excellent scratching material, Shredded or cut corn fodder does very well if there is nothing else on I do not like any form of meadow grass or swale for scratching material because it mats down too much when cut and not enough when not cut.

Rearing Calves.

The man who plans to rear his helfor calves should bear this point in mind: Vitality is one of the most important things to be developed, and it is obtained only through liberal feeding and proper care. And this is only partly true, for, unless the calf is well-born to start with, the best care and feeding will not produce a profitable cow.

Rye Meal for Cows.

The Pennsylvania experiment station has found that rye meal as a part of properly balanced ration for dairy cows is sufficient in milk and butter production to an equal weight of corn meal,

Hubby's Ration Limited. A Wichita attorney is very fond of a certain kind of cake his wife is ex-

pert at making. Recently she left for a visit with her parents, and before going baked a large cake. She knew that if she left the entire cake where her husband could find it he would eat it all in one day, so she cut it into slices and hid them in various parts of the house. Each day she wrote her husband, and in the letter she told him where he could find a piece of the cake,—Kansas City Star

Too Many Minutes. The negro coachman of a southern senator who attended the Episcopal church, after many invitations from the senator's wife, went into the

church one Sunday morning instead of

church one Sunday morning instead of staying outside.

"How did you like the service, Jim?" she asked afterward.

"Not much, Mistis," Jim replied.

"That ain't no church foh me. Dey wastes too much time readin' th' min-utes of th' previous meetin'."—Satur-day Evening Post. day Evening Post.

Again the Bride.

Mrs. Macdonald was a young house-keeper and marketing was new to her.

One morning she went down to the market to get some supplies. "I wish to get some supplies.
"I wish to get some butter, please,"
she said to the dealer.
"Yes, ma'am," he replied, "do you
wish roll butter?"

"Oh, no," she replied, quickly.
"Toast butter. We never eat rolls."

Shake Into Your Shoes

Coal Black Tulip Soon.

Hartford Times: A black tulip, which has been a dream of horticulturists ever since Dumas wrote of such a mythical flower, has been very nearly realized. At the flower show in Horticultural Hall, London, a specimen of tulip has been shown which has such a dark plum color that it might at first glance be mistaken for a black flower. Its growers declare they will be able to exhibit a specimen almost coal black next year.

Righteous Judgment on Rockefeller. Springfield Republican: When so conservative an economist as Professor E. P. A. Seligman of Columbia university condemns the Colorado mine operators for refusing to grant the strikers' demand for collective bar-gaining—a principle already recog-nized in many other states of the Union, in Canada and in England—the or injurious nature and can be used bottom is beginning to fall out of the with perfect safety on the tenderest Rockefeller position

Seen, but not Recognized The position of Huerta recalls the irate congressman who vainly at-tempted to get the floor, and who finally shouted at Speaker Reed;

"Is it possible that the speaker does not see me?" "Oh, yes," replied Mr. Reed, "I certainly see the gentleman, but I don't recognize him."—Norfolk Ledger-Dis-

William Banks, aged 87, took a 15 mile walk near Greenwich, Conn., the other day 'ust to attend a dinner party.

# Sick Women

Reliable evidence is abundant that women are constantly being restored to health by Lydia E. Pinkham's Vegetable Compound

The many testimonial letters that we are continually publishing in the newspapers-hundreds of them-are all genuine, true and unsolicited expressions of heartfelt gratitude for the freedom from suffering that has come to these women solely through the use of Lydia E. Pinkham's Vegetable Compound.

Money could not buy nor any kind of influence obtain such recommendations; you may depend upon it that any testimonial we publish is honest and true-if you have any doubt of this write to the women whose true names and addresses are always given, and learn for yourself.

Read this one from Mrs. Waters:

CAMDEN, N.J.—"I was sick for two years with nervous spells, and my kidneys were affected. I had a doctor all the time and used a galvanic battery, but nothing did me any good. I was not able to go to bed, but spent my time on a couch or in a sleeping-chair, and soon became almost a skeleton. Finally my doctor went away for his health, and my husband heard of Lydia E. Pinkham's Vegetable Compound and got me some. In two months I got relief and now I am like a new woman and am at my usual weight. I recommend your medicine to every one and so does my husband."—Mrs. Tillie Waters, 1135 Knight St., Camden, N.J.

And this one from Mrs. Haddock:

UTICA, OHLA.-"I was weak and nervous, not able to do my work Thus, Welk.—I was weak and hervous, not able to do my work and scarcely able to be on my feet. I had backache, headache, palpitation of the heart, trouble with my bowels, and inflammation. Since taking the Lydia E. Pinkham's Vegetable Compound I am better than I have been for twenty years. I think it is a wonderful medicine and I have recommended it to others."—Mrs. Mary Ann Haddler, Utica, Oklahoma.

Now answer this question if you can. Why should a woman continue to suffer without first giving Lydia E. Pinkham's Vegetable Compound a trial? You know that it has saved many others-why should it fail in your case?

For 30 years Lydia E. Pinkham's Vegetable Compound has been the standard remedy for fe-male ills. No one sick with woman's aliments does justice to herself if she does not try this fa-mous medicine made from roots and herbs, it has restored so many suffering women to health. Write to LYDIA E.PINKHAM MEDICINE CO.
(CONFIDENTIAL) LYNN, MASS., for advice,
Your letter will be opened, read and answered
by a woman and held in strict confidence.
