RADIO ON S. P. TRAIN SETS NEW RECORD

All transcontinental radio records were shattered by the wireless-equipped Shriners' train of twelve cars carrying the Syrian Temple delegation from Cincinnati, Ohio, which was recently handled by the Southern Pacific. A long distance receiving record of 2000 miles for radiophone was established, as well as a 3000 mile record for telegraph reception while in motion.

Aerials were constructed eight inches above the roof of one of the forward cars and were 160 feet in total length. A rail ground was used. The receiving equipment included honeycomb coils and a two-step-audio-frequency amplifier.

The train left Cincinnati in radio touch with both coasts. At Denver, music programs were copied from the big radio stations at Pittsburg and Chicago. At Colorado Springs the Cincinnati station was heard. The long distance record was made at Santa Barbara when the radio while the train was in motion picked up the United States government station NSS at Annapolis, 3000 miles away. This is claimed to be a record for daylight reception under any conditions and an astonishing record on two steps of amplification from a moving train.
