FORT KLAMATH.

Letter from Representative Hermann to the Secretary of War.

ROSEMUR, Oct. 5, Secretary of War, Washington, D. C.

Sir: Having just arrived from a personal visit to southeastern Oregon—the location of Fort Klamath and the Indian reservation—I beg to urge upon your kind attention the matter of retaining the troops at Fort Klamath.

The demand for small farms is growing out of the large holders. A healthy stimulus is given to cultivation of the soil, and to the surprise of the first settlers rich harvests of grain and prairie gardens are produced on soil which but a few years since was regarded as incapable of production.

As settlements and cultivation increase it is found that climatic changes occur. The severity of the late fall and spring frosts, the excessive cold of winter and its duration are diminishing. A greater degree of moisture is being produced, more rain and less snow is found, and it is more idle to predict that are long the highest hills will produce abundant harvests.

No section of the Pacific slope offers better facilities for manufacturing purposes than this great new country will at once present. The people here have come to stay. The tent and bark shanty are superseded by the comfortable frame dwelling, and the school-house and church—those greater anchors of society—give assurance of future promise, gratifying to behold.

Such a country is worthy of the continuance of present protection afforded by the Klamath garrison. The tranquillity and prosperity of this new country will at once exceed that of the great state of New York, with that of Vermont, New Hampshire, Massachusetts, Rhode Island, Connecticut and New Jersey combined.

There are five Indian reservations within the state, containing about 5654 Indians. The Klamath reservation is about the area of all the other four combined.

Oregon has a larger number of Indians in proportion to population of whites than any other state.

Among the least advanced in the arts of civilization, and as to submission as a whole, are the tribes of the Klamath reservation in Southeastern Oregon. Among these is the Modoc tribe. These Indians became noted for their treachery, their stubborn and long continued resistance to the U. S. troops at the Lava beds, and for their massacre of Gen. Canby and Rev. Dr. Thomas while under a flag of truce.

Many settlers were also murdered and much property destroyed before the Indians were subdued. Many of the survivors of this tribe still form a part of the Klamath reservation Indians. They are vindictive, sullen, treacherous and insolent. The Indians on the Klamath reservation comprise in round numbers about 1000.

The agent in charge, in his special report of date Sept. 18, 1886, (last month) to the honorable commissioner of Indian Affairs, says: "Probably one-half of these Indians are kept under proper restraint by force. Remove the military and it becomes a question of grave doubt whether this class can be kept in subjection with aid only of Indian police."

Klamath county is one of the recently organized counties of Oregon, and contains about 120 miles east and west by about 114 miles north and south, and estimating the population on the vote cast this year, it contains now at least 2500 inhabitants. The greater portion of these people are settlers and scattered over the entire county, some residing in remote parts, and long distances from each other.

Many have settled this region, and taken their chances of security by reason of the maintenance of the garrison at Fort Klamath, and in the past two years the population has doubled. In 1884 the vote cast in Klamath county was 598. The nearest railway communication from the fort is about 100 miles, and the roads are very inferior and necessitate slow marches over broken mountain ranges. In the event of a conflict between the whites and Indians, much damage can be done and many lives may be sacrificed before military relief can arrive from any point, should the Klamath garrison be removed.

The troops now there, few as they are, exercise a constant restraint upon the lawless whites, as well as the vindictive Indians. A constant occasion for difficulty exists here in the uncertainty of the reservation boundaries on the one hand and the temptation to the settlers to transgress the lines, and thus obtain the plentiful, but forbidden grass of the Indian. Many of the Indians own cattle and horses, and hence self interest prompts a jealous care of their pasture lands; and besides this the Indian police are required to expel any marauding cut-throat from the reserved limits. The opposing forces here presented, urged by their underlying cause, may at any time come in conflict. Only a few weeks since such a result occurred, and ended in the death of an Indian at the hand of a white man whose cattle had been intruding over the reservation lines. The marauder was bound over on the charge of murder in the second degree, to answer for his appearance at the circuit court. He furnished bail in the sum of \$8000, and is again at large. This proceeding, under our jurisprudence, is not understood nor approved by the larger number of Indians, whose idea of justice in such cases is that only death can atone for the taking of life. One life must be taken for another. According to their code the death of their murdered companion is avenged.

The Indian agent, in his report referred to, says: "The boundaries of the reservation are in dispute and may be for years. The Indians claim natural boundaries described in the treaty, and the whites claim artificial boundaries as denoted dimly by survey. The presence of the military is needed to protect the Indians against the encroachments of the whites."

Treaties are made on both sides, and as soon as the military leave each side will feel that there is neither protection nor

restraint, and the slightest offense will precipitate a war. Southeastern Oregon is now experiencing its first indications of future permanent development. Hereafter the small population was chiefly herders, who settled among the Indians temporarily, and gave no attention to the agricultural or manufacturing possibilities of the country. Now all this is being changed. The demand for small farms is growing out of the large holders.

A healthy stimulus is given to cultivation of the soil, and to the surprise of the first settlers rich harvests of grain and prairie gardens are produced on soil which but a few years since was regarded as incapable of production.

As settlements and cultivation increase it is found that climatic changes occur. The severity of the late fall and spring frosts, the excessive cold of winter and its duration are diminishing. A greater degree of moisture is being produced, more rain and less snow is found, and it is more idle to predict that are long the highest hills will produce abundant harvests.

No section of the Pacific slope offers better facilities for manufacturing purposes than this great new country will at once present. The people here have come to stay. The tent and bark shanty are superseded by the comfortable frame dwelling, and the school-house and church—those greater anchors of society—give assurance of future promise, gratifying to behold.

Such a country is worthy of the continuance of present protection afforded by the Klamath garrison. The tranquillity and prosperity of this new country will at once exceed that of the great state of New York, with that of Vermont, New Hampshire, Massachusetts, Rhode Island, Connecticut and New Jersey combined.

There are five Indian reservations within the state, containing about 5654 Indians. The Klamath reservation is about the area of all the other four combined.

Treaties are made on both sides, and as soon as the military leave each side will feel that there is neither protection nor

BILL AYES BUDGET.

A Newspaper Valometer.

In the last issue of the Buffalo Wallow World we find the following:

"With this number the time seems to have fully arrived at which cease to publication of this paper. Many of our subscribers will not get this issue. To brief about it, we were not permitted to renew our printing paper from the Adams express in this week although we have never in these columns, said against Mr. Adams or his justly celebrated express. We have paid many a dollar into the C. O. D. department of this man's express company. Before we came west our physician told us we could not live without cod liver oil, and, indeed, he was right, for he was not a C. O. D. liver oil of the time since we started this paper?"

"This last remark is offered as a gratuitous insult to every unpaid subscriber. Paid-up subscribers may omit it. Or we will go to them personally and apologize."

"No such tricks or jugglery will be apt to deceive any intelligent person. The housekeeper who has used her Royal Baking Powder ever since she discarded cream of tartar and soda, knows more about its qualities than all the tramps in the country can teach her. The crucial test to which she has put the Royal Baking Powder—the test of actual and successful baking in the preparation of pure and wholesome food, under which it has never failed—is entirely satisfactory to her. She has always had 'good luck,' which it is making light, sweet, and delicious bread, biscuits, and cake, and has placed it, to stay, at the head of her household favorites. She knows that it has been officially approved by the Government chemists as the best and most wholesome food under which it has never failed—is entirely satisfactory to her. She has always had 'good luck,' which it is making light, sweet, and delicious bread, biscuits, and cake, and has placed it, to stay, at the head of her household favorites.
