A very novel and interesting exhibition was made at the last exposition in Cincinnati. The exhibition was an incondensant electron light from a last result of the money paid into the Association, and we can only form a conclusion as Borro in Cincinnati. The exhibition was an incandescent electric light frozen in the process of freezing was performed in the presence of visitors, and while the process was going on various colored analine dyes were thrown upon the ice and the most beautiful effects in color and formations produced, and then there was the glass bulb that we are all so familiar with, its filmy trace of wire upon which the electric current flashed and glowed at the will of the operator. Of course some heat is generated by the light, and to think of freezing it in a solid chunk of ice and light working successfully, seems to the time by the experience of Associations in other States. Now, there may be several members present who want to investors who do not wish to borrow, marines, who had made homesteads of borrow money, all of whom are entitled to it, and the question is—how to decide who is going to secure it? In In some Associations the money is sold at auction to the members who is pays the greatest premium for the members the money is and the end of each month finds them are the members who are the members and the members who are the members immense mineral output for the past year. The total value of all minerals mined in 1887 was \$53,000,000, or \$53,000,000, or \$50,000,000 more than the output for 1886, and over \$100,000,000 greater than that for 1885. The year's yield is not only the greatest ever produced in this country, and leaving out England, is greater than that of all Europe combined.

Independence, Orsgon, Dec. 13. Both myself and wife have been for some years afflicted with disease of the kidneys, and had tried many remedies without obtaining any permanent relief.
