OREGON STATE BOARD OF

The cordial reception given by fruit Remedy-Dissolve one pound of Argicultural Department contains the Blaine went there when quite a lad growers in all parts of the State to sulphate of copper (blue vitriol) in Bulletin No. 1, issued by this Board, one gallon of hot water. To this solucies of the surplus of each European Thomas Ewing, formerly Secretary of the Treasury, and the father of General Sherman's wife. They remember each other distinctly, though Mr. Blaine is a little older of the two, A friend of General Noble tells me some interesting reminissences of his early days. It appears that after he graduated from Miami University he studied law in Cinciumati and then removed to St. Louis to enter practice, but he received no welcome there and soon discovered that among the old slave-holding aristocracy and in the everything social, political and complete the monute of the part of the function of the person to just an earnest desire on the part of the fruit growers to join hands with us in ridding our orebards of the obnovious pests that have already secured a foothold. We already secured a foothold. We already secured a foothold. We already secured a foothold were contained that the man who will not make use of every means possible to rid his orehard of the pests (if any the rescuted no welcome there and the stand and settle to rid his orehard of the pests (if any the rescuted no welcome there and the stand and settle to remove the contains sulphate of ammonia, a little at the one of the ecoper to determ the instead of the pests (if any the obnovious pests that have contains sulphate of ammonia distinct on the object of the surplus of each European time, until all the copper is precipilated. The liquid which contains sulphate of ammonia, a little of time, until all the copper is precipilated. The liquid which contains sulphate of ammonia determined that the man who will not make use of every means possible to rid his orehard of the pests (if any the obnovious pests that have contains sulphate of ammonia determined to the obnovious pests that the best of the obnovious pests that the best of the obnovious pests that the copper is the obnovious pests that the best of the obnovious pests that the best of the obnovious pests that the obnovious pests that the obnovious pests that the biquid which contains sulphate of ammonia abec Thomas Ewing, formerly Secretary is most gratifying and encouraging to tion add liquid ammonia, a little at a nation, especially in the production of of everything social, political and commercial there was no room for a young man with radical, free-soil, abolition notions like himself. He struggled along for several years without any headway, and finally had to give it headway, and finally had to give it the up. Then he went to Keckuk, just several years the Missayri lies in Lower to the control of the series the transport of the moss has penetrated the series the Missayri lies in Lower the moss has penetrated the parts of the State. Careful inquiry starting. As to wheat it says: Europe is practically the only market America can have for this cereal, and she imports only 144,000,000 bushels a orchards of Southern Oregon, and it is feared that it will be found in other parts of the State. Careful inquiry neadway, and finally had to give it skin and taken root in the backbone.

green aphis are also recommended as being good. It is thought by this Board that owing to the dampness of the climate in the Willamette valley

This disease that the apple and pear are subject to is doing a good deal of damage to those fruits in some partions of the Willamette valley. It is more apparent and destructive on some varieties than upon others. The causes which produce this disease are somewhat uncertain. Suffice it that those longest in cultivation, most productive, and in contined situations appear to be most liabe to it. It is a fungons growth presenting, when examined by the microscope, a mossy, spongy character, occupying the skin so as to prevent the development of its tissues, and results in checking the growth at that point, thus creating a black spot and a deformity. When the malady spreads, as it sometimes does, over half or more of the apple of pear, it tends to a deeper nature and successible points on favorable terms.
