An Appeal to Wives

You know the terrible affliction that comes to many homes from the result of a drinking husband or son. You know of the money wasted on "Drink" that is needed in the home to purchase food and clothing. ORRINE has saved thousands of drinking men. It is a home treatment and can be given secretly. Your money will be refunded if, after a trial, it has failed to benefit. Costs only \$1.00 a box. Come in and get a free booklet and let us tell you of the good ORRINE is doing.
McNAIR BROS.

WHY DON'T YOU TAKE BETTER CARE OF YOUR HAIR!

Don't let it turn grey. Don't let the Dandruff get a foothold and start the hair falling out.
It's not natural that young women should have thin grey hair that they cannot dress becomingly.
It should always be natural-colored—luxuriant—full of life and radiance—free from ugly grey hairs and annoying Dandruff.
Nature intended that a woman's hair should be one of her chief attractions.
Why not help her to keep it so?

USE HAY'S HAIR HEALTH

WORK OF THE FIELD STATION

FOREST INSECT STUDY OF PRACTICAL VALUE.

MUCH TIMBER MAY BE SAVED

Interesting and Valuable Information as to the Insects Which Are Destroying Forest Trees of Southern Oregon and Northern California.

The work of the entomological bureau of the Department of Agriculture is probably as little understood by the masses of the people as any branch of government activity. The work in the horticultural line is better known than is the forest work, however. It may not be generally known that the national government is ready to co-operate with the private timber owner in an attempt to stop the destruction of timber by insects, but such is the case. The field station, which is officially known as No. 6, which was recently opened in Ashland with W. D. Edmonston in charge, has handed the Tidings the following communications bearing upon the work of the station. The following circular is sent out from Washington by A. D. Hopkins, officer in charge of the forest insect investigation:

Insect Control in Private Forests.

"The problem of insect control in private forests is one in which there should be direct co-operation between the bureau of entomology of the Department of Agriculture and the private owner, in which the bureau furnishes the technical information and the owner makes the practical application, if he considers it advisable. Therefore it is desired to bring the matter to the attention of private owners; primarily, to secure their interest and co-operation in the desired attainment of practical results from the utilization of information acquired through many years of detailed study by experts on forest insects; secondarily, to lead to the giving of practical instructions and assistance in the inauguration of insect-control policies wherever there appears to be special need of it and where there are at the same time favorable conditions for the attainment of success, in order that the results may serve as practical demonstrations toward furthering the more general adoption of practical methods of preventing losses from depredations by insect enemies of forest trees and forest products."

Mr. Edmonston, the official in charge of the local bureau, has also kindly furnished the following regarding the protection of the pine timber of this section from depredations of bark beetles:

"Extensive investigations carried on during the past five years by the Department of Agriculture have revealed the fact that a large percentage of the timber within small to extensive areas in southern Oregon has been killed in the past seven years by bark-mining insects known as the mountain pine beetle and the western pine beetle.

"The conifers, which are the predominating trees of this part of the country, are subject to a high death rate from insect attack. The pines, the spruces and the firs have each at least one destructive enemy.

"The little genus of Dendroctonus beetles, or tree-killing beetles, is represented in this locality by at least two species. These insects are small, stout, black beetles, less than a quarter of an inch in length.

"Dendroctonus monticolae, the mountain pine beetle, attacks the yellow pine and sugar pine, and evidently all other pines of the northern Rocky mountains and Pacific slope. The adult beetles fly in the period from July to October, and attack the main trunks of the living healthy trees by boring into the bark and excavating long, nearly straight egg galleries between the bark and wood, the eggs deposited by the beetles hatch and the young grubs, or larvae forms, mine the inner bark. In this manner they completely girdle and thus cause the death of their victims, but the foliage of the infested trees remains green and apparently healthy until the following May and June. It then begins to change to a pale green and later to yellowish and brown. By the time all of the foliage is dead, about the first of July, the overwintered broods of beetles begin to emerge. By the middle of August most of them are out of the dead trees and have entered the living ones.

"Dendroctonus brevicornis, western pine beetle. This species is next in importance to the mountain pine beetle as a destructive enemy of the pine, and the two species often combine in their attack. In this combined attack the western pine beetle is a secondary enemy of the trees

because it follows the attack of the other species. When it is the primary enemy it is responsible for the death of a few scattering trees each year throughout the forest, which results in the accumulation of dead timber. In the aggregate this accumulative loss is very extensive, involving as it does, the largest and best trees. "This insect can be controlled and the living timber protected from its ravages by felling the infested trees during the period between the first of October and the first of June and removing the bark from the main trunks and burning it. It is necessary to burn the bark because the broods of this species transform in the outer bark. They are not destroyed by simply exposing the inner bark, as is the case with the mountain pine beetle."

SUPPLIES WORLD'S TUNGSTEN.

Metal Which Revolutionized Lighting Found in Colorado.

Tungsten, the wonderful heat resisting metal which has come into such world-wide prominence the last few years, is mined most extensively in Boulder county, Colorado. For a long time tungsten was used only to add strength and hardness to armor plate and it was unknown to the unscientific world. No large deposits of this strange metal were known and it commanded a high price in the metal market. It was also used to some extent in tool making as it gave additional hardness to metal-working drills, etc. It was especially valuable for such work where high-speed metal cutting was desired, as the friction caused by such excessive speed would fuse ordinary steel-cutting tools, while tungsten, being difficult to melt, remains reasonably cool.

One day the world was startled by the wonderful discovery that the new metal could be used for the filaments in incandescent lamps, producing a clearer and whiter light, and at the same time giving three times the light for the same cost of current. This was a wonderful discovery and the demand for tungsten sent prospectors and miners looking for the precious ore. The world's greatest known supply of tungsten ore comes from Boulder county, Colorado, 45 miles west of Denver. These deposits cover hundreds of acres on a steep hillside, the ore being piled in huge masses over the top of the ground.

The rows of tungsten rock on this "farm" in Colorado were originally veins that were near the surface of the earth. The walls of rock that confined them were eroded away. At the same time the action of heat and cold broke down the veins of mineral and converted them into small pieces. The method of harvesting the "crop" on this tungsten farm is simple. Workmen gather up the rock and send it by chutes down the mountain side into bins just above the railroad track.

Two pounds of tungsten will furnish material for filaments for about 50,000 Mazda electric bulbs, for each filament is only one-twelve-hundredth of an inch in diameter. The current passing through the filament heats it to an incredible degree until it is almost white hot, producing a mellow, clear light of great brilliancy.

SUPPORTING A NEWSBOY.

Spokane Ad Club Is Looking After Injured Boy.

Spokane, Wash.—Four hundred advertising men of Spokane are making weekly contributions of 10 cents each to care for Jimmie O'Neal, a 12-year-old lad who lost a leg in an accident during an automobile parade given by the Spokane Ad Club. Jimmie was an uninvited guest in a place of honor at the rear end of one of the big auto trucks, and when the machine following got beyond control for a few moments and bumped into the one immediately ahead, the boy's leg was crushed so severely it had to be amputated. Fearing the driver might be blamed for the accident, Jimmie at first refused to tell the police how the accident happened. As soon as news of the misfortune of the boy was brought to the attention of President R. E. Bigelow of the ad club, a special meeting was called and it was determined that every member should pay 10 cents weekly to the support of the boy and his widowed mother. That is why someone passes a hat around at every meeting of the club.

Outclassed.

A dialogue which may be anticipated in 1950:

First Child—I guess my family is just as good as yours. My great-great-grandfather was in the battle of Gettysburg!

Second Child—That's nothin'. My grandfather was at Chicago in 1912.

For sale by J. J. McNair, East Side Pharmacy.

Oh, How I Itched!

What long nerve-racking days of constant torture—what sleepless nights of terrible agony—itch—itch—itch, constant itch, until it seemed that I must tear off my very skin—that— Instant relief—my skin cooled, soothed and healed!
The very first drops of D.D.D. Prescription for Eczema stopped that awful itch instantly; yes, the very moment D.D.D. touched the burning skin the torture ceased.
D.D.D. has been known for years as the only absolutely reliable eczema remedy, for it washes away the disease germs and leaves the skin as clear and healthy as that of a child.
All other druggists have D.D.D. Prescription—so to them it you can't come to us—but don't accept some big profit substitute.
But if you come to our store, we are so certain of what D.D.D. will do for you that we offer you a full size bottle on this guarantee.—If you do not find that it takes away the itch AT ONCE, it costs you not a cent.

J. J. McNair, East Side Pharmacy.

L. N. Judd TALENT, OREGON
JACKSON COUNTY
Orchards, Homes and Farms
In a Thriving Center in One of the Garden Spots of the Rogue River Valley.
Has for sale fruit, garden and alfalfa land. Tracts from 5 to 1,000 acres; also timber land, a livery stable, lots in Talent, Medford and Ashland. Write, enclosing stamp, or, better still, come and examine.

Land for Sale!

74-acre tract, good house and barn, 2 miles from Talent, on rural mail route; telephone in house; 1/4 mile from school; bearing trees; 8 acres in alfalfa. Do not have to sell, but if a person is looking for an all-round place this is hard to beat for the price, \$6,000.00.

91-acre tract, part of which is in the town limits of Talent, and an ideal place to cut into town lots or acre tracts and larger tracts. All good land and mostly under irrigation. This is a good chance for the right man. Will be glad to show interested parties over this proposition any time. Talent is the town that is doin' it now.

Large or small tracts, close in or well out; fruit, farms, dairy, alfalfa or, in fact, any kind of lands. If interested call on or write
