Monday *March 6 and 7*

SPRING OPENING

Tailored to
Your Figure

Ladies you are invited to attend the Spring Opening at
Orres Tailor Shop, Saturday and Monday

Very latest ad-
vanced styles

March 6th and 8th, where you will see the very latest advanced styles in
Materials and Fashion for ladies tailored suits, coats, skirts, dresses, etc.

Suits, Coats,
Skirts, Dresses

Diamonds, Watches, Jewelry

I have on display all the
new goods of the season

Watch repairing. Manufacturing and refinishing of
old jewelry done in factory style.

In the Social Realm

Teacup Club.

The Teacup Club was royally entertained at the home of Miss Mathes on North Main street last Tuesday afternoon. The hostess was assisted by the Mesdames Kramer, Chatten and Miller. About forty guests were present. The greater portion of the afternoon was taken up with a mock trial. Mrs. Seager, president of the club, was tried on a charge of bribery in securing her office. Mrs. Chatten presided as judge, Mrs. Cassius Miller was attorney for the state and Mrs. Kramer for the defense. Mrs. J. E. Barrett acted as sheriff and Miss Mathes as clerk of the court. Six witnesses were called and produced large amounts of evidence both in favor of and against the defendant. The prisoner was convicted and sentenced to serve four years as president of the club without partaking of any of the refreshments. The affair was side splitting from start to finish. Delicious refreshments were served and during the serving poetical conundrums with answers in the names of ladies present were propounded.

Follow the crowd and buy Johnston's chocolates at Rose Bros.

St. Patrick Affairs.

The first of a series of three social affairs which are being given this week by Mrs. Blalock, Mrs. Brown, Misses Lilly and Rose Patterson was enjoyed Wednesday evening at Moose hall by about forty couples of Ashland's social elite. Dancing to the strains of Herndon's orchestra occupied the greater portion of the evening and delicious refreshments were served about midnight in the supper hall. The hall was beautifully decorated with shamrocks and other Irish decorations. The table was lighted with green candles set in candlesticks made of potatoes. Little green pigs were placed at intervals on the table and together with the shamrock napkins carried out the St. Patrick's day idea to perfection. An entertainment with cards and a third affair for those who care for neither cards nor dancing will complete the series.

Ohioans Meet.

About seventy-five natives of the good old state of Ohio met at the Moose hall Tuesday and enjoyed a fine program and a regular old Ohio dinner.

Spring Spraying Recommendations

(By M. P. Henderson, Plant Pathologist for Jackson County.)

Apple and Pear.

All apple and pear trees should be sprayed with a dormant strength of lime sulphur solution plus black leaf "40" just as the tips of the leaves are emerging from the early buds. This is the best time for the application of a general clean-up spray. It is effective against scale insects, aphids, pear leaf blister mite, and red spider, and recent experiments in other sections of the state indicate that it is also very important in the control of apple scab.

The lime sulphur should be used at the rate of one gallon to nine gallons of water and one pint of black leaf "40" should be added for every 150 gallons of diluted spray.

Where apple or pear scab occurs, a second spray of lime sulphur, three gallons of the lime sulphur solution to 100 gallons of water, should be applied when the blossom buds have the cluster and the pink is beginning to show in the opening blossoms. This spray should be put on as a preventive measure even though last season's crop showed only a very small percentage of scab infection. In most sections of the country this is considered the most important application for scab and is usually designated in spray calendars as the first scab spray. If leaf-eating insects are present, arsenate of lead paste may be added at the rate of two pounds to fifty gallons of the diluted spray.

The third spray should be applied just after the petals have fallen and before the calyx lobes have closed. This spray is primarily for the control of the codling moth; but where scab and mildew are present in an orchard they should also receive attention at this time. If codling moth and other biting insects are the only pests to be considered, any good arsenate of lead paste used at the rate of two pounds to fifty gallons of water will be sufficient. If scab is also present it will be necessary to add lime sulphur at the rate of one gallon to thirty-five gallons of the arsenate of lead solution, or atomic sulphur at the rate of twelve pounds to one hundred gallons of the lead arsenate spray. Where mildew is a factor in the orchard, the atomic sulphur and lead arsenate combination should be used for this and later sprays.

Subsequent applications will depend upon the seasonal development of the pests to be controlled and will be recommended as conditions warrant.

Stone Fruits.

For stone fruits, the first or dormant spray of lime sulphur, one to ten dilution, plus black leaf "40" at the rate of one pint to 150 gallons of the diluted spray, should be applied just before the buds open. The purpose of this spray is the control of the peach leaf curl as well as scale insects, peach twig miner, aphids, red spider, etc. The best time to catch the peach leaf curl is just before the buds open, since the majority of infections take place from spores which have been adhering to bud scales and twigs over winter. As soon as the tips of leaves show in the buds they are likely to become infected. It is important that every twig be thoroughly covered with the spray.

For California peach blight and fruit spot which occurs on peach, apricot and almond, a spray should be applied about the first week in May. Self-boiled lime sulphur 8-8-50

To Exchange

For Stock of Gen. Mdse. or Hardware, good stock and grain farm containing 560 acres, 175 in cultivation, good buildings, plenty of water, on line road only 7 miles from county seat, on main line of S. P. Ry.

or atomic sulphur ten pounds to 100 gallons of water is recommended. A second treatment may also be necessary the latter part of May.

One grower in the valley reports using Bordeaux mixture, 3-4-50 formula, on his peaches without injury to foliage or fruit and with excellent results so far as control of the fruit spot is concerned. The application is made after the young fruits are well formed just before thinning time. Neighbors and fruit dealers have also assured me that this orchard has been producing exceptionally clean fruit. I recommend, therefore, that other peach growers who have had difficulty in controlling this disease try this treatment out on a small block this season. Bordeaux mixture has been found very efficient in the con-

(Continued on Page Eight.)

NOTICE OF HEARING ON REPORT OF VIEWERS IN THE MATTER OF EXTENDING GLENVIEW DRIVE.

In compliance with a resolution of the City Council duly made and entered on the 2nd day of March, 1915, to me directed, notice is hereby given to Rosa Bodayla, John Bodayla and John Bates, alias Henry Smith, and all other parties and persons whomsoever affected by any assessment of special benefits or award of damages determined by the Board of Viewers in the matter of the extension of Glenview Drive in the city of Ashland, Oregon, that the report of the viewers in said matter was filed in the office of the Recorder of the city of Ashland, Oregon, on the 2nd day of March, 1915, at which place said notice is filed subject to the inspection of any interested party, and that any person or persons aggrieved thereby is required to appear and make any objection thereto which he or they may have, before the Common Council of said city at 7:30 o'clock p. m. on the 16th day of March, 1915, at the Council chambers in the city hall, at which time and place said Common Council will consider said report and any and all protests and objections which may be made thereto.
