Boiling Points Real Test of Gasoline, Says Expert.

"To start easily, accelerate quickly and smoothly, and have plenty of dependable power with economical mileage, you must use a gasoline having its boiling points in a continuous, unbroken, gradually rising series," is a statement made recently by a prominent Standard Oil man.

"Boiling points are what determine good gasoline, not gravity. And it is well to bear in mind that mixtures or blends can not have the proper continuous chain of boiling points. There are so many connecting fractions in the chain that no mixture could be made to contain even approximately the correct number or character of links. Straight-distilled refinery gasoline is the only motor fuel containing the correct chain of boiling points."

Occasionally you find a man who is careless enough to smoke in a dynamite factory. But the day may come when all that you can find of that man is a pants button three miles away.
