THE MISSOURI FIRST

Mississippi Rivermen Want Mis-
souri River Attended to.

SAND AND SILT WASHED DOWN

Missouri River Furnishes More Sand
Than Any Other Stream In Country
And Clogs Channel of the Mississippi
—Improvements Depend On This Fact

WASHINGTON, June 13.—It is probable that when President Roosevelt makes his voyage down the Mississippi river next October he will find a surprising sentiment existing. Evidence is accumulating that a strong effort will be made by steamboat men and communities along the Father of Waters to have the Missouri river attended to first and before any extensive work is undertaken upon the larger stream. This is not done in any spirit of self-sacrifice on the part of the Mississippi rivermen, but is due to several causes.

Men who have studied the two streams declare that the Missouri river furnishes more sand than other stream in the United States. This sand, washing out from the mouth of the stream, is carried slowly down the Mississippi and deposited in sand bars, rendering what otherwise would be a stable channel a series of shifting obstructions. These sand bars offer a constant menace to navigation below the mouth of the Missouri, while above that point rivercraft ply in comparative freedom from danger of grounding. The silt, sand and soil that is being constantly swept down into the Mississippi is due entirely to the instability of the Missouri current. The channel is comparatively narrow and the river has an unsatisfactory habit of wandering around the landscape practically of its own free will. It has changed its bed a dozen times within as many years and has washed down to the Gulf scores of what were once rich farms.

Some little time ago it was suggested that the bed of the Missouri river be ploughed, specially built boats to be employed in the work. It is now suggested that after the actual cutting of the river bed has been accomplished, nothing should be done to the Mississippi River until mattresses of willows or lumber have been placed on the bottom of the Missouri from the highest navigable point to its confluence with the Mississippi.

It has been brought to the attention of the Federal authorities by river men who have spent years in the river traffic that the river channel between Fort Benton and New Orleans a half century ago was deeper by 15 feet than it is today. This was due in great measure to the fact that the Mississippi river in those days was the main artery of commerce for the great Mississippi Valley, and the constant churning of sidewheel steamers kept in motion the sand that was washed down from the Missouri and it was swept along to the Gulf. With the passing of the steamers this sand formed bars against which lumber, logs and other floating debris found lodgment, eventually becoming islands. These uncharted obstructions have made inland waterway navigation a precarious undertaking.

Although the prosperity of what President Roosevelt termed "the richest agricultural empire the world ever knew" have been phenomenal, there is little doubt that its prosperity would have been even greater had the fleets of steamboats that once plied the Mississippi, Missouri and Ohio rivers not been completely driven out by the railroads. The National Rivers and Harbors Congress is seeking to restore these fleets to the great inland streams. This organization recognizes that with the rapid growth of the nation's foreign trade a cheaper means of reaching the ocean is necessary. In addition, the railroads have been so congested with freight that the need for an auxiliary system of transportation is imperative.

Following close on the heels of the last convention here of the National Rivers and Harbors Congress, at which time the President heartily endorsed its campaign, Mr. Roosevelt named the Inland Waterways Commission, which is expected to do much toward rehabilitating water transportation.

CHURCH STEEPLES.

Old-fashioned Steeples Not Popular With Modern Architecture.
NEW YORK, June 13.—Some of the church structures recently built in New York City indicate that the old fashioned steeple is not popular with modern architects. The Madison Square Presbyterian Church, the pastore of which is the Rev. Dr. Charles H. Parkhurst, which has an immense dome, is an example of the new style of ecclesiastical architecture. Situated at the corner of Madison avenue and Twenty-fourth streets, it is one of a group of the most striking buildings in New York. To the southwest, little more than a hundred yards away, is the tall Flatiron, across Twenty-fourth street is the Metropolitan Life, one of the largest office buildings in the world, two blocks to the north is the Madison Square Garden; and across the square

is the Fifth Avenue Hotel, the old-time rendezvous of national politicians.

The church proper and the parish house are joined so as to form one structure. The exterior is of brick up to a marble base. The floors and dome throughout, and the partitions in the parish house are made of terra cotta tile blocks, so that absolute safety from fire is assured. The cost of the church and parish house was \$325,000.

Another house of worship even stronger than Dr. Parkhurst's is the Broadway Tabernacle (Congregational), at Broadway and Fifty-sixth street. It has the appearance of a combination church and office building. It is also of the most modern fireproof construction, being built of steel protected by hollow terra cotta blocks. It cost \$350,000.

The Tabernacle has a tower, but not the sort commonly associated with churches. All of it is put to use. On its first floor are the Sunday school rooms. Between them and the belfry there is room for all the activities of the church organization. Mission rooms and a ladies' parlor are on the third floor, the Young Men's Library on the fourth, the pastor's study, reception room and church library on the fifth, the sexton's living quarters on the sixth and a museum on the seventh. Among that is belfry. In the basement are two spacious halls for all sorts of gatherings.

Far outstripping either of these in cost is the First Church of Christ Scientist, better known as the Christian Science Church, at Central Park West and Ninety-sixth street. One million, three hundred thousand dollars was spent on this building, exclusive of the cost of the land. It is not accurate to describe it definitely as a church, because it has an organization that treats the sick, keeping open seven days in the week. It is said that 5000 persons come there for treatment from the Christian Science practitioners every year.

Marbles were brought from every corner of the globe to line the walls of this edifice. Huge steel girders support the dome and the galleries. Terra cotta tile of the finest variety makes floors and walls irresistible to fire. There are about 40 rooms, besides the auditorium, in the building. There is no branch of Christian Science activity which is not represented there.

Don't!!!

Don't let your child suffer with that cough when you can cure it with Ballard's Horehound Syrup, a sure cure for Coughs, Bronchitis, Influenza, Croup and Pulmonary Diseases. Buy a bottle and try it. Sold by Hart's Drug Store.

B. B. Laughter, Byhalia, Miss., writes: "I have two children who had croup. I tried many different remedies, but I must say your Horehound Syrup is the best Croup and Cough medicine I ever used." Sold by Hart's Drug Store.

You need a tonic that will put the sap of life into your system and fortify you from all diseases. Hollister's Rocky Mountain Tea is recognized as the greatest strengthener known. Tea or Tablets, 35 cents. Frank Hart.

SHORT TALKS BY L. T. COOPER.

SPRING AILMENTS.

A man and a house need the same thing in spring—a good cleaning out. A certain amount of impurities have gathered in both during the winter. I am no authority for house cleaning. So far as the man is concerned, Cooper's New Discovery taken for two weeks will bring the desired result. It will positively do these three things—clean out the stomach and bowels, tone up the system generally, and bring back the snap to body and mind that now seem dull and worn out. Try it and see if you won't be as pleased as Mr. Hull, whose letter I quote below:

"I suffered a general breaking down of the system. Had no appetite, poor digestion and was constipated. I lost ambition and took no interest in anything. Nothing I could do seemed to give me relief until upon a friend's advice I began to use Cooper's New Discovery. It helped me from the start. Now I am able to do as much work as the next one and I enjoy it. I have a hearty appetite and am stronger and better every way. Your New Discovery medicine is certainly the best tonic and system builder I have ever known." A. W. Hull, 142 Porter St., Detroit, Mich.

These are the famous medicines with which Mr. Cooper recently created such a stir in Chicago. His demonstrations there attracted wide attention. We are agents.
