BURIED UNDER STONE WALL

Cries Lead To Its Discovery And After
48 Hours Of Burial It Was Released—
Kept The Neighborhood Awake At
Night.

BALTIMORE, Md., Aug. 27.—Sealed up for forty-eight hours in a hole in the cellar wall of Charles P. Kroll's saloon at 1213 Fulton street, Brooklyn, a black cat was released today when a mason tore down a portion of the wall. The feline's cries led to its discovery. It seemed to have suffered but little as the result of its long imprisonment. The proprietor suffered more.

Last Saturday morning masons tore out a portion of the building's cellar foundation and put in a new wall. That night the cries of the cat prevented sleep in the house.

By putting their ears to the floor they came to the conclusion that pussy had been incarcerated between the floors. With an axe Kroll chopped up the flooring behind the bar, while the wife tried to coax the cat from its hiding place. The cat answered with a "meow," but did not come out. Sunday morning Kroll mutely chopped up some more of the woodwork. Then, on going to the cellar, Kroll found that the cries came through the new stone masonry of the foundation wall. For several hours he tried to make an opening in the wall at the point from where the sound seemed to come, but he was finally compelled to give it up.

This morning a mason demolished a large section of the newly constructed wall and in a small opening between the masonry and the wall of the adjoining building the cat was found.

Mr. Kroll was informed that it would cost him at least \$200 to repair the damage to the floor of the saloon and to the cellar wall.

Remarkable New Locomotive Fire-Box.
During the past ten years constructors of locomotives have made vain endeavors to find some better construction to replace copper fire boxes, which are not only costly to maintain, but the walls of which have to be sustained by hundreds of bolts and stays.

Mr. Brotan, inspector and superintendent of the workshops of the Royal and Imperial Austrian State railway at Gmund, has now invented a water-tube fire-box, which has been in use for some time, with the very best results.

Upright seamless steel tubes, arranged in rows with their ends rolled into a cast-steel pipe, form the boundary at the sides and rear of the rectangular combustion chamber, from which the gases of combustion pass forward through the iron tube plate into the fire tubes of the boiler. In order that the foremost water tube may adapt itself to the curvature of the tube plate, the lateral wall tubes are bent so as to correspond to the circumference of the fire-tube boiler. To the rearmost lateral wall tubes there are connected the rear wall pipes, which are arranged close together in concentric curves and encircle the fire door. The space under the fire door and tube plate is lined with fire clay. The upper tube ends are rolled from below radically into the rear portion of the steam collector of a second boiler lying above the fire-tube boiler, and projecting towards the rear; this second boiler carries the steam dome, and is connected to the fire-tube boiler by means of three stays.—Technical World Magazine for September.

To Use The Earth's Inner Fires.

"As the exhaustion of the fuel supply of the world becomes more acutely realized as an inevitable prospect, men of science are taking into view with increasing seriousness what has been but a dream till now, the possibility of drawing upon the interior of the earth for the energy which, whether in the form of heat, power, or light, is required for the welfare and convenience of mankind."

Rene Bache writes thus of a dream of engineers in the Technical World Magazine for September.

"When it is considered that the cool crust of the planet on which we dwell is thinner, relatively to size, than the shell of an egg, and that at a depth of only twenty-five miles—a distance less than from Philadelphia to Trenton—all substances are molten, the temperature being something like 10,000 degrees, it seems absurd that we should indulge anxiety about an available heat supply for the future. As will presently be shown there are places where the shell of the globe is very much thinner, and

where the hot core is so near the surface that conduits reaching downward might easily be constructed by human ingenuity.

"Of course, it would not be practicable to bore down into a region of molten rocks, but pipes could be sunk a sufficient distance to reach strata of as high a degree of heat as might be desired. Prof. William Hallowell, of Columbia University, says that the putting down of such a pipe would not cost more than \$10,000 per mile; and he offers the suggestion that, merely for experimental purposes, it would be worth while to spend \$50,000 in sinking two pipes to a depth of twelve thousand feet. A connection having been established, in a manner presently to be described, between the lower ends of the pipe an inexhaustible supply of heat could be fetched to surface."

NEW CATHOLIC APPOINTMENT.

SPOKANE, August 27.—Announcement was made today at Gonzaga College in Spokane, that the Very Rev. George de la Motte, superior general of the Rocky Mountains mission of the Catholic church, has as the result of a new ruling of the Jesuit order, become superior of an enlarged district, comprising California, Oregon, Washington, Idaho, Wyoming, Montana, South Dakota and the Dakotas, which will be known as the California and Rocky Mountain mission. This order actually creates a province in the church, as it will be more independent from Rome than ever before. Father de la Motte has gone to California to familiarize himself with conditions and upon his return he will make a tour of the other states.

Father de la Motte is a native of France and has been superior of the Rocky Mountains mission. He is recognized as one of the foremost theologians in America since his appearance as defendant in the deputations at Woodstock in 1889, when he defended the Catholic theology against many. He attended as a delegate the last general meeting of the Jesuit order in Rome, where the unification of the missions was brought about, giving the new general full authority in the management of the religious and educational institutions.

Previous to the change the Rocky Mountain and California missions were part of an Italian province, while the states of North and South Dakota were parts of the German mission.

The new mission numbers 400 Jesuits and will become one of the largest in four colleges, of which Gonzaga is one and a number of flourishing parishes and Indian missions. The other colleges are at Seattle, St. Ignace college, San Francisco and Santa Clara college of Santa Clara, California. Father John P. Friedman, superior of the California missions, will continue as president of St. Ignace college.

Chamberlain's Colic, Cholera and Diarrhoea Remedy, Better Than Three Doctors.

"Three years ago we had three doctors with our little boy and everything that they could do seemed in vain. At last when all hope seemed to be gone we began using Chamberlain's Colic, Cholera and Diarrhoea Remedy and in a few hours he began to improve. Today he is as healthy a child as parents could wish for."—Mary B. J. Johnston, Linton, Miss. For sale by Frank Hart and leading druggists.

Jest Ask Dad.

Our family is the queerest one I'll bet you ever see; There ain't but one in all the batch With a good quality. The rest of us have lots o' traits. But all of 'em are bad, An' if you don't believe me, why, You jest ask dad. There's sister Kate an' sister Nell, Their fault is makin' breaks; They ain't like pa a single bit, Because they make mistakes. They ought to have been better with But if you don't believe me, why, You jest ask dad. Next comes my sisters, Bess and Sue, With fault of too much style; They seem to think o' nothin' else, They talk it all the while. They keep us in hot water with Some fool, expensive fad, An' if you don't believe me, why, You jest ask dad. Now last—not least—comes Bill an' me; Fergittin, is our trait. It ain't no habit we've acquired, It seems to be our fate. We all take after ma, we do— No wonder we're so bad— An' if you don't believe me, why, You jest ask dad. —John D. Larkin in the September Woman's Home Companion.

Remedy for Diarrhoea—Never Known to Fail.

"I want to say a few words for Chamberlain's Colic, Cholera and Diarrhoea Remedy. I have used this preparation in my family for the past five years and have recommended it to a number of people in York county and have never known it to fail to effect a cure in any instance. I feel that I can not say too much for the best remedy of the kind in the world."—S. Jamison, Spring Grove, York County, Pa. This remedy is for sale by Frank Hart and leading druggists.

TENANTS' BILL UP IN COMMONS.

All Amendments By House Of Lords Rejected And Conference Asked

LONDON, Aug. 27.—With the Irish Nationalists very wide awake and nearly everybody else asleep after a night-long session, the house of commons at 3:30 o'clock this morning began the consideration of the house of lords' amendments to the evicted tenants' bill.

Practically all the changes introduced in the bill by the upper house were rejected, and, at 7:45 a. m. the weary legislators went home after appointing a committee to confer with the lords, and attempted to arrange the differences.

Pineules are for the Kidneys and Bladder. They bring quick relief to backache, rheumatism, lumbago, tired worn out feeling. They produce natural action of the kidneys, 30 days' treatment \$1.00. Money refunded if Pineules are not satisfactory. Sold by Frank Hart's drug store.

For an Impaired Appetite.

To improve the appetite and strengthen the digestion try a few doses of Chamberlain's Stomach and Liver Laxative. Mr. J. H. Setts, of Detroit, says: "They restored my appetite when impaired, relieved me of a bad feeling and caused a pleasant and satisfactory movement of the bowels. Price, 25 cents. Samples free. Hart and leading druggists."
