#### UNPREPAREDNESS.

The Secretary of War for the United States has publicly declared the unpreparedness of this country for war. This is significant, authority, fact and peril.

It is all very well to arrogantly assert our resources; to say that we have men and money and factories, skill and credit and patriotism; if we have not TIME, which is the fundamental basis of all preparedness, then we are unprepared in the worst sense of the word.

The country is not so long free from an engagement, which, had it been with a country more modern, and better equipped, than Spain, we might be deploring graver issues than remain to us from that war.

What scheme of preparation shall ensue we know not; but we do know that the Pacific Coast must be incorporated in it to a vast and immediate degree, and that the mouth of the Columbia must figure largely as one of the potent integrals of that program. The quiesence of the years has put this important post and on the Pacific will make it indispenessence of all engagements as well as contracts and when Uncle Sam begins overlook so stragetic a point as this, a ton, the cheapest mining yet known because it stands for a huge range of to man. because it stands for a huge range of territory and millions of people and other millions of property.

### THE POLITICAL SEASON.

The whole country, including Astoria, of course, is entering upon another political season, and the turmoil, jealousies, realignments and bitternesses, always unescapable, are upon us. New men, new policies, old ambitions, fresh aspiratons; tricks, lies, promises, pledges, schemes and counter-schemes, old "bed-fellows," "dark-horses," new leaders and old counsellors; all the hub-bub, confusion, doubt, treachery, loyalty, parti- they realize their danger. sanry, that make for dirt and disaster and disappointment, and leave precinct, town, city, county, state and is upon us, what we have got to go are satisfied with.

American politics, as practiced today, has but little to inspire great men or great aims; the dollar, and of this, you have only to give Hyomei the personal unit, are about all that loom large in the cult; and while we are not without great national ends to be served, and conserved, we are treatment does not relieve, your miserably minus the honest stimulus of hardy purpose and high resolves in the practice of our electoral work.

dispensed, with as good grace as fragmentary hope can inspire and the to use Hyomei at the first symptoms only compensation to be relied on is that out of the interminable list of nase, offensive breath, raising of successes at the polls of the year, mucous, droppings in the throat, some great and good man will find spasmodic coughing. The sooner you himself in a position to compel the use Hyomei, the sooner you will be nutrition of the tissues and the same better thought and healthier activity freed from all these troubles. of his fellows in the right work of the nation.

torious existance. According to the years ago the various mixed drinks old argument that whisky, used modhave lasted just 50 years longer. But unabused, has but mighty little bear more to do with ripe old age than any guzzling habit ever heard of. Whisky, as it is known and used in this age, is a worse curse than anything else, because it leads to all other desperate evils and habits.

#### GOLD FROM OCEAN SANDS.

From Shasta to San Diego, all the way along the shores of the Pacific Ocean there is gold in the black sand which, for the greater part of the length of the state, underlies the gray and yellow sand of the beach. This has been known to mining men for a score of years or more, but even since they found it out they have been getting it. So writes Harry H. Dunn in the Technical World Magazine for

The values in the sand are low, not more than twenty-five cents per ton and the sea washes heavily over all manner of structures which are set up on the beach to separate the sand from its gold. These were the two principal obstacles to be overcome: To find a machine which would withstand the storms of winter and the tides of summer, and, at the same time, be delicate enough to draw the gold from the black mass of the beach.

At last, however, the riddle has been solved, despite the wrecking of one of the plants with which the work was commenced, and a recent clean up of one day's run of 1,000 tons harbor out of the running; but a war of black sand paid \$200 over and above all expenses. The full value of sable and the government MUST the gold in the sand, could it have make it impregnable. Time is of the been entirely removed, would have been \$250, the actual amount taken out was about \$235 worth, making to furbish up and get in line for a the cost of handling that 1,000 tons of Pacific war he will not be likely to sand a trifle more than three cents

A description of the apparatus used to extract the gold from the sands, follows this introduction and it is chine at work.

### CATARRH A GERM DISEASE.

Success of Hyomei Guaranteed By T. F. Laurin.

Catarrh is an insidious disease of most destructive tendency. Its approaches are unalarming and its vittims are well on the road to a chronic part: stage or to dread consumption before

It is not a blood disease, but is caused by germs that lodge and grow in the air passages, causing irritation nation but a fraction, if any, ahead of with poisonous and offensive mucous the interminable game. This is what discharges. To cure this condition, stomach dosing is ineffective and the through, subscribe to, and swear we only healing agent is Hyomei. It goes directly to every nook and corner of the air passages, disinfecting, healing and curing. To be convinced a trial, and T. F. Laurens will sell you an outfit with the understanding that if the trial is not satisfactory, and the money will be refunded.

You cannot afford to trifle with ca tarrhal troubles, for if neglected they But the drudgery must be met and grow worse and the annoyance and danger rapidly increases. It is best ticular acetones and the volatile fatty of catarrh, such as stoppage of the

### DRINKS CHANGE.

Fashions in Drinks Change the Same as Everything Else Does.

Fashions change in drinks as in whisky per day for the past 20 years. everything else and nowhere are these This is a side-wipe to the good old changes more evident than in New theory that one must drink corn- York as is natural in view of the fact juice constantly to round out 80, 90 that the city's drink bill amounts to or 100 years of hardy, jolly, and no- nearly a million dollars a day. A few

in which gin figured had a great run erately and regularly, that is, daily and there was a famine in limes, causand in rational quantities, contributes ed by the consumption of gin rickeys. to longevity, this Missourian should great demand for Scotch whisky, coincident with the spread of the highthe truth of the matter is that whisky, ball habit. Now the barkeepers in a good thing in its way and place and the big hotels and other places of liquid refreshment along the Great ing on any man's life, if that life be, White Way report that the highball clean and wholesome and sanitary is passing into a decline and attriand honest. These elements have far bute it to the adulteration of Scotch whisky which robbed it of its attraction for the man who drinks for taste rather than for intoxication. Rum highballs now have the call according to these same authorities who have the best opportunities for observing the changes of fashion in drinks. In fact rum, the drink of our grandfathers and more remote ancestors, seems to be renewing its popularity for all sorts of mixed drinks. The reason given is that this is about the only form of spirits that has not been attacked on the ground of impurity and adulteration. Men who have been frightened away from whisky by the exposure of Dr. Wiley and other One sees very few much trimmed and pure food agitators have taken to rum in the belief that it is chemically completely baffled in all efforts at pure and have found it highly agreeis the reason or whether it is due to ties of broadcloth. Sometimes it has the New Yorkers everlasting search an anchor or an eagle embroidered on for novelty it is interesting as an top and a dainty pair of ribbon ends. example of the fact that fashions change frequently even in the matter of drinks.

#### For Consumptives.

A specialist of a noted Eastern clinic gives the following formula as the best known formula for consumption:

Mix two ounces of glycerine with eight ounces of good whiskey and add one-half ounce of Concentrated oil of pine. Take a teaspoonful or a table poonful every four hours.

Care should be taken to get the real Concentrated oil of pine, which comes only in one-half ounce vials sealed in round air-tight screw-top cases. The ingredients can be procured at any drug store. The above formula will also cure bad coughs and colds very quickly.

### THE ODOR OF SANCITY.

A French Writer's Theory of How It May Be Exuded by Man.

Dr. Georges Dumas is the author of an article in the Revue de Paris on "The Odor of Sanctity." The write accepts as true the numerous reported instances of saints and mystics of the Catholic church whose bodies after accompanied by photos of the ma- death or during moments of ecstasy emitted peculiarly pleasing odors of various kinds. Then men and women with whom such legends deal, argue-Dr. Dumas, were neurasthenes, and it is not impossible that the aroma of sanctity which surrounded them was the product of strictly physiological and chemical changes common to all men, but present in highly intensified form in subjects who, so to speak burned up the candle of their existence at an unusually rapid rate. He says in

"So far, then, we have come across i great variety of perfumes-cinnamon clove, orange, pineapple, rose, violet illy of the valley, yellow amber and benzoln. Now, the natural constitution of all of these is well known, and chemistry produces them daily for commercial purposes. We may therefore substitute the equivalent chemical expressions for the ordinary terms we have employed and say that orange, cinnamon, violet and musk owe their perfume to aldehydes and acetones, aromatic liquids derived from the alcohols, just as the artificial essence of pineapple comes from butyric ether. We have, then, to ask whether the human body can produce odorous compounds of the kind we have mentioned and under what conditions. As a matter of fact, it does produce a certain number of such compounds in the destruction of organic matter, which is the constant condition of life, in paracids, butyric, formic, acetic, etc. If the process of combustion is normal all these constituents are burned up, completely oxidized, and give as a residue water, carbonic acid and urea. But let some slackening occur in the inmost constituents will escape through the breath, perspiration and the skin."

### COFFEE

There is a time for good tea, and a time for good coffee; there is no time for poor either.

Your grocer returns your money if you don't Mke Schilling's Best; we pay him

#### DICTATES OF FASHION.

Few Felt Hats Seen-Draped Skirts Only Suitable For Girlish Figures. Very few felt hats are seen at pres ent, and when the hat is of felt it is edged or lined with velvet or satin. Many hats are lifted up on one side after the eighteenth century style.

Winter hats for children are simpler and more becoming this winter than they have been for many seasons.

A pattern of this perfectly plain shirt waist may be had in six sizes 3 to 45 inches bust measure. Send 10 cents to this office, giving number of pattern (301) and bust measure, and it will be promptly forwarded to you by mail.

befurbelowed hats among the smaller folks. True simplicity is to be found in the cloth tam-o'shanter, which comes in all shades and in all quali-

Indications of the incoming draped skirts are seen everywhere. The double peplum skirt is also very popular. Women with plump figures will be slow to adopt a fashion which necessarily cuts their apparent height and appears to increase the size of the hips. These draped skirts are obviously only for young, girlish figures.

The illustration shows a perfectly plain shirt waist which will be a favorite for general wear and for golfing and other outdoor sports. The ease with which it can be made is one of its attractions, and its adaptability to wool and cotton goods as well as silk is another advantage. A tailor finish will always be adopted.
