## ORCHARD AND GARDEN.

Late cabbage and main-crop celery plants may be set late this month. Don't hoe beans while they are wet. It spots the leaves. Wait till they are dry.

Make three successional plantings of sweet corn this month, at ten-day intervals.

Get ready for the strawberry crop. Provide carriers, boxes, crates, stencils, packing shed, etc.

Do not pick berries when they are wet; when picked, hurry them to a cool place out of the sun.

For grape-root and mildew, begin early and spray the vines with Bordeaux mixture at intervals of about two weeks.

To destroy squash-bugs, lay a cloth or shingle by the plants. The bugs go under it and can be collected and killed in the morning.

Remember the neighbor who has no berries on his farm. Send down a nice basket of them once in a while. Makes your own taste so much better. Muzzle the horses and pad the outside portions of whiffletrees and harrow when cultivating the orchard; thus avoiding all bruised and "barked" trees.

File the hoes and keep them sharp. Stir the soil frequently; and always remember that a hard crust will form after a rain if you don't loosen up the soil promptly.

Sow cucumbers now for pickling. When the vines begin to bear, pick all the fruit every day or so. Let none go to seed (ripen) if you want the vines to continue bearing.

Frequent and shallow cultivation should be the rule in the new strawberry bed; and also in the raspberry, blackberry, currant and gooseberry patches, if the last four are not mulched.

No grain or grass crops in the young orchard, please. Cultivation is best. Stir the soil every two weeks until August. 'Tis a good plan to throw two or three forkfuls of manure around each tree, after a rain.

To prevent a scabby crop of potatoes, soak the seed for two hours in a solution of one-half pint of formalin (formaldehyde) in fifteen gallons of water. Then plant the seed in soil which has not recently grown a crop of scabby tubers.

Watch for the little slugs—darkish, slimy fellows—that are likely to be on pear or cherry leaves now. Fine, dry dust, if thrown in the trees, will kill every slug it covers. Or almost any of the regulation orchard sprays will exterminate this pest.

Pumpkins planted among the corn hills are no special hindrance to the crop if the ground is very rich. They are sometimes a great benefit in a dry season; the leaves and vines cover the ground and keep it from drying up after cultivation ceases.

Cabbage and tomato plants can be safeguarded against cutworms, by inserting a circular paper fence in the soil around each stem. Any stiff paper will do. Have each fence about one and one-half inches above ground, and the same distance away from the plant.

A gentleman who made the experiment the past season, recommends moth balls as an effective means of keeping the striped beetle off the cucumber, melon and squash vines. The remedy is not only inexpensive but easily applied, only one ball being
