CLERKS ON GRIDIRON

Yesterday the football team of Lipman, Wolfe & Co., and Olds, Wortman & King played a tie game on the Bishop Scott campus. Neither side scored.

Lipman, Wolfe & Co.'s lineup was: Center. McCarl; right guard, Ruppel; left guard. Spence; right tackle., Kruse; left tackle, Thompson; left end, Schafer; right end, Spooner; quarterback, Strain; left half, Delay; right half, Wetherdon: fullback, Rube Adams. Olds, Wortman & King's players were: F. Parson, George Downs, P. Smith, F. A. Ott, B. Parker, S. McCarter, C. McFarland, J. Buffington, G. Godfrey, G. Montag. G. Kelton, H. E. Deering, C. M. Rire and F. Courtney.

DENTALS DEFEATED.

THE DALLES Nov' 28 -The local foot. ball team, after a hard struggle, defeated the Portland Dental College eleven by score of 10 to 0. The game was a fast one. The visitors were not heavy enough for the home team and were simply carried off from their feet.

ALBANY GAINS VICTORY.

ALBANY, Nov. 28 .- McMinnville and the Albany College teams played a one-sided game here yesterday in which the score was 22 to 0 in favor of the home eleven. In the game last year between the two missionary teams Albany won out by a score of 12 40 0.

FARMERS WIN OUT.

CORVALLIS, Nov. 28 .- The Oregon Agricultural College boys landed on the Pacific University team with a scott of 31 to 0 yesterday. Last year the Farmers were defeated by a score of 17 to 0. The game of vesterday was hotly contested. visitors were not heavy enough to break the lines of their opponents. The lineup was as follows:

IN GARDENS BY THE SEA. The sea anemone is one of the commonest of flowering animals. It is to be found clinging to rocks in sheltered places along the shore in practically every part of the world, for it is not confined to any special region ... It grows only in comparatively shallow waterthat is, in the depths of less than 500 fathoms-although there is one species that lives in the open sea; but, wherever found, it is essentially the same in structure. It is a tough, leathery tube, spread out below into a base that fastens is to rock or other foundation, and expands above into the flower-like disc, with the mouth in the center. All around the opening of the mouth are curling tentacles, not unlike the petals of a modern chrysanthemum. Some varieties are al-most or entirely colorless, and in some others the tentatcles are gorgeously tinted and rival the flowers in the field. But in all lurks death in a certain and horrible form. Watch some little creature touch the curving arm, and it will be seen to curl inward and wrap the intruder in its folds as it pushes it toward its mouth.

The inner sides of the tentacles are covered by poison glands that sting the prey to insensibility or death, and so stop the struggles that might prove disastrous to the anemone. When the mouth is reached Just beyond the Esteros River, to the east the captive is pushed into the hollow innothing but this deep volcanic sand. The terior, and the anemone shuts up into a earthwayes coming from the sea botreddish-brown ball until its meal is ditoni to hard passed over this loose sand, gested, when it spreads its fatal beauties for another victim.

Another great family of flowering animais is that including the sea "cucumshallow waters of Pearl Harbor. The As has been said above, it is house lieved that the Guatemalan carthounkes were caused by the volcanic phenomena which are so often associated with earth-organism lives. The mud of the bottom nish the food, but it appears to subsist upon the inorganic mud itself. The most curious thing about the "cucumber"'s is that it takes lodgers, in a way. It has a face by Farthquakes were the cause of large cavity within its body that is filled opening volcarile vents that perhaps had with water, and into this cavity a little very long been closed; and that the ereptions which have been destroying so and then lives within the helpless host. many of the coffee estates are really the It is not a parasite, for it leaves its lodginstituted after effects of that day of ter- ing to seek food, but it merely lodges in the holothurian for shelter, as the power of stinging that sea cucumbers possess to a high degree renders them fairly safe from molestation. The little lodgers do not seek to do any harm to their landlord, except when several take quarters in the same one, and then they may inflict fatal damage by overcrowding .- Honolulu Star.

> HIS EYE TO THE FUTURE. (New York Sun.)

Washington had just been elected presi-

dent. "But tell us," he was asked. "why did you select the cherry tree to cut down?" "I knew," replied the sagacious George. "that the plum tree would come in handy later

Without further ado he selected his cabinet and appointed 55 postmasters.

In the second half the visitors kicked off to the home team, who lost the ball of a fumble in the first down, but re-galined it almost immediately.
