WILL CELEBRATE HIS 25TH ANNIVERSARY

For almost a quarter of a century Rev. Father L. A. Brosseau, pastor of the Church of the Most Precious Blood, has been a member of the priesthood of the Roman Catholic church. The 25th anniversary of his ordination will be celebrated in his church at Mount Tabor next Sunday.

Father Brosseau will officiate. The oration will be delivered by Rev. Father Black, pastor of St. Francis' church of East Portland. At 5:30 Father Brosseau will receive the parishioners.

REV. L. A. BROUSSEAU.

After coming to the coast Father Brosseau was in charge of St. Joseph's church in San Francisco. He was at Gervais, Or., for several years and there founded the order of the Sisters Adorers of the Most Precious Blood. In June, 1892, he came to Mount Tabor and, in what was then a forest, built the church and monastery of the Precious Blood. A branch is located at Columbia beach. There are at present 22 sisters in the order at Mount Tabor.

Since coming to Mount Tabor Father Brosseau has built up a large congregation and has one of the largest church properties in Portland. The monastery is a large frame building, three stories in height. The rectory and church contain a number of fine oil paintings, the work of Father Brosseau's sister. The grounds are ample and the church site is on the eastern slope of Mount Tabor, overlooking Montavilla.

The jubilee services next Sunday will be at 9:30 a. m., and at 3 p. m. Rev. Brosseau will receive the parishioners. The special music will consist of: Opening march, Mendelssohn; offertory, Gounod; march, "Baptist."

AN EXPERT'S TALK ON CARE OF TREES

By Wilbur K. Newell.
Here in Oregon we have our full quota of fungus diseases, among the worst being apple tree anthracnose, apple scab, brown rot, downy mildew, etc. A fungus is a plant just as the apple tree, wheat stalk or other plant upon which it may be found; growing. It is a very simple plant in structure and lacks the green coloring matter of other plants. Its seeds are called spores and are very much smaller than the smallest of green plants, and are produced in almost inconceivably great numbers.

These small light seeds are easily spread over the country, carried by the wind, or by birds and insects, or even washed about by the rains. And of course are carried long distances on nursery stock, fruits and vegetables.

Where a spore strikes suitable soil such as the surface of leaf or fruit, and the condition of heat and moisture be favorable, it will germinate, push out a delicate, slender germ tube. In the case of most parasitic fungi this germ tube penetrates the epidermis of the leaf, or fruit, and develops in the underlying tissues entirely beyond the reach of fungicides.

The vegetative portion of the fungus, the part which, roughly speaking, corresponds to the roots, leaves and stems of ordinary plants, the part which absorbs the food materials and produces the spores, consists of a mass of more or less branched, white or colorless, minute threads and is called the mycelium.

Development of Fungi.
In the group of internal fungi, which includes all our serious diseases, the mycelium develops entirely within the host plant. None of these can be cured by spraying, because when once established, they are far beyond the reach of any spray, but they can be prevented by having the plant you wish to protect covered by a fungicide during the time the spores are germinating. The spore is then destroyed before it can take hold of the plant. External fungi like gooseberry mildew, or the powder mildew of the grape or rose, can be both prevented and cured by spraying.

Apple the Anthracnose.
This disease, variously known as "canker," "dead spot," and "black spot," is a serious one. It appears first as small, dark brown, slightly depressed spots on the bark and extends rapidly during the spring, sometimes girdling and quickly killing limbs, or covering the tree with spots of dead wood, sometimes two or three inches wide by eight or nine inches long. The tree is greatly weakened, so that limbs break easily, or in many times killed outright. The spots cease growing about June, then up spores or seeds, which are distributed and begin their growth in turn, soon after the beginning of cool weather in the fall.

The disease spreads only by means of these spores, and at this season of the year, the remedy is to spray in October or early in November, just as soon as possible after apples are picked, with strong Bordeaux mixture. On small trees the spots when first noticed can be cut out and their further growth prevented by washing with the spray.

Apple Scab.
Apple scab attacks both the leaves and the fruit. On the fruit it forms circular spots of dark smoky green, or black color, in size up to that of a dime, but usually smaller. Where thick they unite and cover a large spot, stopping growth of the apple at that point, and it becomes distorted. On the leaves it forms dark olive green spots, checks growth and the leaves appear curled or humped. In severe cases the tree may be nearly defoliated.

Pear scab is nearly identical, and the remedy the same, which is spraying with Bordeaux mixture just as the buds are swelling; again soon after the blossoming.

TEACHERS' EXAMINATIONS
Notice is hereby given that the county superintendent of Multnomah county will hold the regular examination of applicants for state and county papers at the city hall, Portland, Or., as follows:

FOR STATE PAPERS.
Commencing Wednesday, February 10, at 9 o'clock a. m., and continuing until Saturday, February 13, at 4 o'clock p. m.
Wednesday—Penmanship, history, spelling, algebra, reading, school law.
Thursday—Written arithmetic, theory of teaching, grammar, bookkeeping, physics, civil government.
Friday—Physiology, geography, mental arithmetic, composition, plane geometry, general history.
Saturday—Botany, plane geometry, general history, English literature, psychology.
FOR COUNTY PAPERS.
Commencing Wednesday, February 10, at 9 o'clock a. m., and continuing until Friday, February 12, at 4 o'clock p. m.
First, Second and Third-Grade Certificates—Wednesday—Penmanship, history, orthography, reading.
Thursday—Written arithmetic, theory of teaching, grammar, physiology.
Friday—Geography, mental arithmetic, school law, civil government.
PRIMARY CERTIFICATES.
Wednesday—Penmanship, orthography, reading, arithmetic.
Thursday—Art of questioning, theory of teaching, methods, physiology.
Note—No papers will be sent to other counties unless applicants secure written consent of their county superintendents to take the examination here. F. ROBINSON, County School Superintendent.

WILL SIFT DOWN THE EVIDENCE

JUDGE FRASER ACCEPTS EVERYTHING IN THE TAX CERTIFICATE SUIT, BUT WILL DECIDE LATER WHAT IS GERMANY'S HEARING TO BE RESUMED MONDAY.

In the case of Multnomah county vs. First National bank and W. F. White, the defendants are engaged in the preparation of certified copies of the records of the tax sale certificates which they acquired from the county, and Monday they will resume their attack upon the validity of the certificates. It is the contention of the defendants' attorneys that the tax certificates had no real value, and the county therefore suffered no damages and has no cause of action.

Judge Fraser has ruled that all evidence offered by the defense for the purpose of proving the certificates invalid will be admitted, and he will determine later whether it is germane to the issues of the case. The county contends that the defendants wrongfully acquired the certificates and cannot now question their value.

WHITMAN GIRLS NOT ALLOWED TO DANCE

(Journal Special Service.)
Walla, Walla, Wash., Feb. 6.—Miss Beulah Shields of Tacoma, who is attending Whitman conservatory, refused to obey the command of Miss Cobb, dean of Reynolds hall, to leave a dancing class at once, and now she is forbidden to wander farther from the protecting wing of the authorities than the bounds of the campus. The more severe sentence of suspension was passed on Miss Mona Noben of Clarkston for a share in the same offense.

The dean comes from New England and objects to the inmates of Reynolds hall indulging in the pastimes at all. Accordingly, when she heard that four of the young ladies were attending a dancing class in the city last Saturday, she telephoned to the woman who conducted the class to send them back to the hall. Miss Shields, who is said to have promised not to attend these classes, added insult to injury by remaining until the class was over. The authorities of the college took the matter up and "jailed" her, as the sentence is called, for a month.

Miss Noben, notwithstanding that she is a pretty blonde and popular with her fellow pupils, is said to have had several marks scored against her already by the authorities. Accordingly suspension was decided in her case. This was her second year at the academy, and last year she incurred punishment from Miss Cobb by daring a big football player to jump into the college pond.

WHY WILLIE WAS ABSENT.

Dear Teacher—I am sendin' our Willie with a inclosed excuse for his absents during the time he was away from school, which will explain why he was not there. It is as much your fault as Willie's that he wasn't to school. You told him that anything that fell for any distance wood increase in wait, as it de-

sended, and Willie put a pair of skates in the front yard under the bay window, and went up on the roof to let a shoe-maker's last fall, and see how much it would weigh at the bottom, and fell off himself and fractured his spinal column just below the kitchen window. He was laid up for 3 weeks and 2 days. Now if you don't stop such nonsense in your teaching, I will be compelled to report the affair to the board of education. What difference would it make to Willie if the shoe last did way more when it cum down. He couldn't set junk on them bases. Never mind teachin' Willie science. He won't need it in baseball, and furthermore we don't want only acrobats doom leavin' a life off the rufe for the benefit of doctors and hospital students. It's well enuff for rich men's sons, wot has nothin' to do but keep gettin well and havin' relapses. But wot a poor man's son wants in how I read his own name when he sees it in print. If Willie shoed ever be a motor man on an electric car, they cood rite down enything at a coroner's inquest as his evidence and he woodn't know it. So let this kommuncashun be a warnin to you. Your's truly,
MRS. HENNERLY R. LEATHERS.

How to Clean Jewels.
Every little while all brooches, rings and such things, that are in constant use, should be brushed with a toothbrush that has been dipped in eau de cologne. If the setting is open it must be done from the back, and be careful not to loosen the stones. Then lay the things in a box of jeweler's sawdust, which has been slightly heated beforehand and leave for an hour.
Gold chains may be washed in warm soapwater, drying them on a soft towel by pulling back and forward. They may also be dried in sawdust and the particles can be blown or dusted out afterward. Be sure and get them dry, as
