growers estimating the production at

about one-fourth of its usual volume.

The crop last season was also short and this caused a very small amount of

caused but little movement in the mar-

This he did, handing them over \$30, and forgot all about his gift until his friend's loss last Monday. Then the thought came to him that another present might help in getting the \$125 back to its owner, and so he said that Cielinski would give the officer one-half of

supplying the grown-up trade, and shoeing the youngsters necessarily creates a separate and important department. It is evident on the face of it that a growing child's foot calls for a special shoe adapted to its peculiar needs. The soft, pliable bones and muscles steadily growing and changing shape must be housed in a shoe which is designed to allow nature free play in doing her work. The child's shoe should be more pliable than the adult shoe, still they must be stoutly made in strong leathers, for no shoe gets more racking wear than a child's shoe. We make a specialty of shooling the youngsters. Bring them in during vacation and let us fix them up. Nowhere in the city can you find such BARGAIMS as here.
