M'DONNELL, THE NOTED SWINDLER

After 20 Years in English Prison He Lands in San Quentin---Other Matters of Important News from the Bay City.

To the police of two continents Mc-Donnell is known as one of the most in their robbery of the Bank of England ists for the delightful entertainment they had afforded her.

by the Scotland Yard detectives. The Transport Service. immense sum of \$5,000,000 was filched from the bank by means of bogus bills and George Taylor McDonnell was the man who did the engraving for the gang. Twenty years in an. English prison was the sentence that McDonnell received. It was supposed that he would be sentenced for life, but a technicality saved him. When he left England after the two decades of prison life, he came to the United States, and

(San Francisco Bureau of The Journal.)

chased a ticket for San Francisco. Strange to say, McDonnell resorted to petty crimes on arrival here instead of aiming for bigger game. His method was that employed by those who are known to the police as "pawnshop workers." The swindler would write to a man of some standing in a country town and explain to him that a certain person in whom the intended victim was interested had died and left no personal property except a pawn ticket represent-ing a receipt for a valuable diamond locket that had been hypothecated for the small sum of \$12.50. McDonnell signed himself "The Rev. Mr. Taylor" and requested that the amount mentioned be forwarded him that he might redeem the locket and send it to the person addressed, as the friend on his dying bed had made provision that the ticket be turned over to him.

after a brief sojourn in New York pur-

In this manner McDonnell received several hundred dollars from innocent persons. The United States secret service and the postal inspectors traced him to a little room in an obscure street in this city and he was placed under arrest, with the result that conviction tollowed in the trial.

One of the men who was sent to the English prison with McDonnell was Dan Noble was with the Bidwells Berlin and he shared part of the between Japan and Russia will not be millions stolen from the Bank of England. Noble sent his money to America in care of one of his brothers and with built the well known Rossmore hotel at Syracuse. Other investments were and there have been a number of sales made that paid well and the forger patiently "did time," hoping to enjoy the have not fallen off, but most of the conwages of his crime on being released struction is confined to small homes from iail. No sooner was he out of lengland and in New York than an old from the center of the city. There are him by the New York authorities and

The Transport Service.

The army transport service is won dering whether it will be called upon to put on a number of vessels to transport roops and marines to the Philippines. While the officials in charge have not received direct orders from Washington, many of them admit that it is evident to them that the government is preparing to send more men to the island and o offer some of the ships that are available to the navy department for he purpose of sending marines to Cavite. It is known that the situation in the Philippines does not justify this and it is surmised that the intention is to keep a larger force at the islands that they may be available should rouble occur in the far east that might involve the United States. There has been a deal of activity at army headquarters and all of the troops at the Presidio are being drilled with a con-stancy that the men cannot understand. The heavy coast batteries are manned and operated by alternating detach-ments of coast artillerymen that all may understand thoroughly the worklarging some of the quarters, which is troops would be scattered among the posts of the country and not held any longer than necessary at San Francisco, It is thought that the Buford, now under orders to proceed to Portland for spoken by more than 100,000 lumber and forage, may be turned over to the navy department when she fin-

ishes her voyage to Manila. War Causes Dull Trade. The war in the Orient has caused some duliness in business circles here, but merchants all seem to be of the when they attempted to rob the Bank of opinion that the effect of the struggle will help the Pacific coast, especially if Japan is victorious. SOUTHERN LINE

PRESIDENT LYTLE OF THE COLUM-BIA SOUTHERN ANNOUNCES THAT EXTENSION TO BEND WILL BE STARTED NEXT MONTE-WILL BE COMPLETED IN TWO YEARS.

The long-looked-for railroad into Central Oregon is at last soon to be built. From Shaniko, the present terminus of the Columbia Southern railway, south to Bend, a distance of 100 miles, the line is to be extended. Work will begin about the middle of next month and the line will be completed in about 18 months or

"It takes quite a little while," said President E. E. Lytle of the Columbia Southern this morning, "to construct 100 miles of new railroad, but we expect to have trains running on the line within two years. We intend to begin work just as soon as the weather clears up, and I expect we will start about the middle of March. There is still some snow in that part of the country."

The extension of the road from Shaniko has been anticipated ever since the line was first built. It was thought the road would have been constructed before this, but as the Columbia Southern is feeder of the O. R. & N. Co. and it has been understood that the company held back in hopes that the Harriman people would buy the road. The price asked was intimated by an O. R. & N. official

The region to be opened to the outside world by the Columbia Southern is directly through the fargest woolgrowing region in the United States. Annually 5,000,000 tons of wool is shipped from Shaniko. The land of Central Oregon is similar to the rich wheat land of the eastern part of the state, and it is said that the transportation prob-lem is the only thing that is keeping farmers out of the country. As it is

Vast Area Stretches From Eternal Snow to Waters Near Equator

Herald.

Before we go any farther it might be profitable for you to know a little some-thing about the country we call India, thing about the country we can thus, the character of its population, and the but of these only 12,097,580 are replan of government, because it is necesturned as able to read and write. The plan of government, because in order latest statistics show that 3,195,220 are to understand certain matters about which I intend to write. What surprises one most for a few days after arrival with him and begin again upon a new basis to study, the situation.

The first impression of India is its vastness and its variety. Few travelers have even a slight conception of either fact until they are brought face to face with them, and to a newspaper writer both are so bewildering that he is perplexed where to begin and what to talk about first.

India is a great triangle, 1,900 miles across its greatest length and an equal distance across its greatest breadth. It extends from a region of perpetual snow in the Himalayas, almost to the equator. The superficial area is 1,766,642 square miles, and you can understand better what that means when I tell you that the United States has an area of 2,970,230 square miles, without counting Alaska or Hawaii. India is about as large as that portion of the United States lying east of a line drawn southward along the western boundary of the Dakotas, Kansas and Texas.

The population of India is 294,361,056,

or about one-fifth of the human race, and

it comprises more than 100 distinct na-

tions and peoples in every grade of civilization, from absolute savages to the most complete and complex commercial and social organizations. It has every variety of climate, from the tropical humidity of the jungles along the south-ern coast to the frigid cold of the mountains; peaks of ice, reefs of coral, impenetrable forests and bleak, treeless plains. One portion of its territory records the greatest rainfall of any spot on earth, another of several hundred thousand square miles is seldom watered with a drop of rain and is entirely dependent for moisture upon the melting ings of the big guns. Barracks have snows of the mountains. Twelve thou-been inspected and there is talk of en- sand different kinds or animals are enumerated in its fauna, 28,000 plants in significant in view of the statement re- its flora, and the statistical survey precently issued from Washington that pared by the government fills 128 vol-One hundred and eighteen distinct languages are spoken in various parts of India, and 59 of these languages are each. There are a large number of other languages and dialects spoken by different tribes and clans of less than 100,000 population, and to reach them the British Bible society has published the whole or parts of the Holy Scriptures in 42 languages, which reach 220,000,000 people, but leave 74,000,000 without the Holy Word. In order to give the Bible to the remainder of the population of India it would be necessary to prepare 108 additional translations, which the society has no money and no men to perform. From that little statement some conception of the variety of the people may be obtained, because each of

The province of Bengal, for example, is nearly as large as the North Atlantic 127,541 square miles. the tribes and clans has its own distinct

organization and individuality, and each

is practically a separate nation,

religions as follows: Hindus 207,146,422 Mohammedaus 62,458,061 Sikhs 2,195,268 Animistic 8,711,360 Buddhists 9,476,750 Christians 2,923,241 Jains 1,334,148 Parsis 94,190 Jews 18,228

It will be interesting to know that of the Christians enumerated at the last census 1,202,039 were Roman Catholics, 453,612 belonged to the established Church of England, 322,586 were orthodox Greeks, 220,863 were Baptists, 155,-455 Lutherans, 53,829 Presbyterians, and 157,847 put themselves down as Protestants without giving the sect to which they adhere.

The foreign population of India is very small. The British-born number only 96,653; 104,583 were born in Europe, and only 641,854 out of nearly 300,000,

well-defined regions: the jungles of the coast and the vast tract of country known as the Deccan, which make up the southern half of the territory; the great plain which stretches southward from the Himalayas and constitutes what was formerly known as Hindustan. is ample water for the motive power for big scouring mills, and the building of and a three-sided table land which lies between in the center of the empire and wool-cleansing establishment at that is drained by a thousand rivers, which carry the water off as fast as it falls ers. As it is the raw unwashed wool is transported to Pendleton or the Wiland leave but little to refresh the earth. This is usually the country of famine, but the government is pushing the irrigation system so rapidly that before many years the danger from that source will be much diminished. The whole of Southern India, accord-

ing to the geologists, was once covered by a great forest, and indeed there are still 66,305,506 acres in trees which are carefully protected. The black soil of that region is proverbial for its fertility and produces cotton, sugar cane, rice and other tropical and semi-tropical plants with an abundance surpassed by no other region. The fruit-bearing palms require a chapter to themselves and are a source of surprising wealth. According to the latest census the

cocktail does on an empty a year.

As many as 171,735,000 people are accomplished in either 14,576,000 are engaged in raising cattle; the river was 33 feet above zero, and 14,576,000 in producing food and drink; flooded all the lower part of the city reaching to Sixth and Oak streets. has yet to find it out.

of textiles; 2,361,000 are in the manufacture of glass, pottery and stoneware;

The reason Scott's 4,293,000 in manufacturing leather;

There are 2,148 cities in India with

more than 5,000 population, and 31 with more than 100,000 population. The largest is Calcutta, which, ascending to the census of 1901, has 1,125,400 people; Bombay has 776,006 and Madras 509,346.

Few countries have such an enormous birth rate and death rate. Nowhere else are babies born in such enormous numbers, and nowhere does death reap such awful harvests. Sometimes a single famine or plague sweeps millions into eternity, and their absence is scarcely noticed. Before the present sanitary regulations and inspections were intro duced the death rate was nearly double what it is now; indeed, some experts estimate that it must have been several times as great, because no records were In some of the provinces, and in most of them, they were incomplete and inaccurate. India is now in a healthler condition than ever before, and yet the death rate varies from 31.10 per 1,000 in the cold provinces of Agra and Oudh to 82.7 per 1,000 in the tropical regions of Behar. In Bombay last year the rate was 70.07 per 1,000; in the central privinces 56.75; in the Punjab, which has a wide area in northwestern India, it was 47.7 and in Bengal 36.63.

The birth rate is almost as large, the following table being reported from the

principal provinces Births		1	Births

India.			

Notwithstanding the crowded condition of the country and the density of the population, which is 167, to the square mile for the entire empire, mountain, desert and fungle, as against 21.4 in the United States, the people of India love their wretched homes and few can be induced to leave them. The largest immigration ever known in any one year was in 1901, when the total reached only 34,147, and the greater part of these were induced to go to Uganda, Africa, to work upon a railway; and it is asserted that the greater part of them have already returned to their homes. The average annual immigration for the last 10 years has been less than 10,000.

Bengal, the province of which Calcutta is the capital, on the eastern coast of Instates combined, and contains 122,458 dia, is the most densely populated, havsquare miles. The province of Rajpu-tana is even larger, and has an area of in the south has 548. Oudh in the north

Some parts of India have a larger population ation to the acre than any other part of the world. The peasants, or coolles, as they are called, are born and live and die like animals. Indeed animals never are so closely herded together, or live The population is divided according to such miserable, wretched lives. In 1900 54,600,000 people were more or less affected by the famine, and 5,607,000 were fed by the government for several months, simply because there was no other way for them to obtain food. There was no labor they could perform for wages, and those who were fortunate enough to secure employment could not earn enough to buy bread to satisfy the hunger of

It is estimated that 30,000,000 of people starved to death in India during the 19th century, and in one year alone, the year in which that good woman Queen Victoria assumed the title of empress, more than 5,000,000 of her subjects died from hunger. Yet the population without immigration is continually increasing from natural causes. The net increase during the 10 years from 1891 to 1901 was 7,046,-285. The struggle for life is becoming greater every year; wages are going down instead of up notwithstanding the rapid increase of manufacturing industries, 'the extension of the railway system and other sources of wealth and employment that are being rapidly de-

More than 200,000,000 persons in India are living upon, less' than 5 cents a day of our money; more than 100,000,000 are living upon less than 3 cents; more than least two-thirds of the entire population do not have food enough during any year of their lives to supply the nourishment demanded by the human system. As I have already shown, there are two acres of land under cultivation for each inhabitant of India. This includes gardens, parks and pastures, and it is not evenly distributed. In many parts of the country, millions are compelled to live opon an average of one-fourth of an acre of land and millions more upon half an acre.

RIVER INFORMATION.

Clerk Maher of the port of Portland commission is compiling data from the weather bureau records giving the lowest and highest stage of the Willamette enormous area of 546,224,964 acres is river at Portland during the past 13 under cultivation, which is an average years. The lowest water known in Febof nearly two acres per capita of population, and probably two-thirds of it 1903, when the river was only 2.4 feet ruary during the period covered was in about the same on a was actually cropped. About one-fourth above the low water mark. The highweakened system as a than 22,000,000 acres produce two crops 11.3 feet. During the present month it

has been up to 13 feet. The highest water ever known at stomach. If any good is wholly engaged in agriculture; 25,468,000 Portland was during what is termed as are more or less employed upon farms: the June rise in 1894. At that time 3,646,000 are engaged in raising cattle; the river was 33 feet above zero, and
