# WILLIE GIVES THE TWINS A RIDE AND JIM GETS A SCARE

The inventor made an automatic saddle horse for Jim's twins.

It started on in a walk and Jimmy touched the button for a canter.

This was so fine that he tried the button for galloping.

Then he fell up against all the buttons at once and caused trouble.

That horse did all kinds of stunts and took the fence like a hunter.

The twins landed in a tree all right, but maybe Jim didn't get a scare.
