Oregon Mining Man Describes Ore Occurrence at Both Tonopah and Goldfield.

TWO CAMPS DESTINED TO CAUSE A STAMPEDE

Goldfield Has Unique Geological Conditions and May Become Rand of America.

Tonopah and Goldfield, the bonanza mining districts of Nevada at the present time, and which have been the subject of many recent wars described geologically in a very interesting manner this morning at the Imperial

"Tonopah's blue lode property, of which the prospect is owned, said Mr. Young, is simply an andesite. The exposure on the Butte where Jim Butler first found ore in an andesite lode protruding above a comparatively recent lava flow. For a time work was confined to the cropping andesite, but deeper development proved that the lava capping covered equally good ground.

"Goldfield is another formation, and in my mind will prove the Rand of America. There we have an old rhyolite, and from which is a younger lava rock. The escarpment around which the semi-circular deposit has been worked seems clearly to indicate the rim of some volcanic movement.

especially for us. Then, of course, our Umbrellas are different from the common store Umbrellas. THIS SPECIAL SALE is something unusual for us, but last summer we made up a large stock of Umbrellas from \$1.50 to \$50.00 each for our fall trade, but during the fall months the weather was against us, for it was all sunshine and no rain, so that we did not sell half of those made up, and to keep our stock nice and fresh we are having a Christmas sale, selling the Umbrellas at just the price of the handles, and even less in some cases.

Never has such a fine stock of Umbrellas been offered to the Portland people at sale prices. Come to either of our factories and be convinced.
