GRANITE HILL HAS RICH ORE DEPTH

Strike on Three Hundred Shaft Level Proves to Be an Extraordinary Shoot. HIGH GRADE ROCK ASSAYS SEVERAL THOUSAND A TON. Ore Body Five Feet Wide, Between Granite Walls—Free Visible to Unaided Eye.

(Special Dispatch to The Journal.) Grants Pass, Or., Feb. 13.—As more particulars of the recent strike in the Granite Hill mine are received, it becomes apparent that an extraordinary find has been made. The rich shoot came in on the 300 shaft level, while drifting on the vein under what is known as the Jumbo, or old workings. The drift is out approximately 100 feet from the main shaft, and the vein strikes up the hill obliquely. The ore body at the point of the strike is said to be full five feet wide, while the rich stuff runs through it in generous quantities. Much ore assaying \$2,300 to \$5,000 a ton has been taken out, and frequently the rock carries free gold visible to the naked eye several feet distant. A portion removed in the course of development is milled; mixed with larger quantities of lower grade ore, but much of the rich rock will have to be shipped direct to the smelters. The Granite Hill, under the management of L. R. Wickert and ownership of the Granite Hill Lumber Co., has prosecuted development in a thorough manner. When Manager Wickert assumed control he found the property equipped with a five-stamp mill, and operated by surface hoists from which many thousand dollars of rich ore had been stopped. Convinced of the permanency and magnitude of the ore body, he began sinking a vertical working shaft, which cut through the vein on the 200 level. Drifts were extended on the 200, the shaft continued to the 300, and drifts run there. The vein, which is in coarse grained micaceous granite, was found exceptionally strong in the lower levels, varying in width from three to 10 feet, and values were all that the management could ask. Stopes were started on the 200 and 300, while drifts were extended with a depth of 200 feet. The strike of the fissure, and especially in the direction of the old workings. It is understood that the rich strike was made practically under what was known as the Jumbo shoot, from which many thousand dollars were taken by the early operators. Development on this level is to continue. Manager Wickert will continue exploring the vein on its strike as it has been exposed by the shaft. Drifts toward the diorite contact near the shaft is to be sent down to the 400, with levels on both the 400 and 500, exhaustive exploration being prosecuted everywhere. Equipment at this mine is second in southern Oregon only to the Greenback, near by, and which seems to be a sister property. A compressor plant furnishes air for the drills, a direct acting hoist with a depth capacity of 2,000 feet has been installed, headframe and shaft house being of a strength and size capable of sustaining this work. The mill building is of a size to accommodate 20 stamps, 10 having been installed, and water power to be used auxiliary to steam has just been provided. The equipment, for its capacity, is among the best of the northwest. Deep work has been prosecuted in northern Josephine county until the Greenback management commenced putting the incline of that group down. This work has reached the 1,200 level on the vein, and it is known that a rich ore body with a capacity of 1,100 and 1,200 feet depth. The Greenback vein is on a diorite contact, and has a serpentine intrusion cutting it off at the east. The close proximity of the Granite Hill, similar to the Greenback, and other general points of resemblance, gave the manager of the newer property encouragement. The results attained are amply assuring, for the Granite Hill vein is a prettier one than the Greenback, and the richness of its mineral as depth is attained and exploration extended leaves nothing to be wanted in this respect.

NEVER HEARD OF CASSIE CHADWICK

Andrew Carnegie Denies Most Emphatically Any Relation to Frenzied Financier.

AMUSED BY WAY SHE WORKED FRIENDS

Says Men Swindled Ought to Have Known That He Always Had Cash on Hand.

(By Victor A. Watson.) Copyright, 1905, by the American Journal-Examiner.

New York, Feb. 13.—For the first time since the colossal Chadwick scandal became public Andrew Carnegie, whose name was signed to \$10,000,000 worth of fraudulent notes, this evening discussed the Chadwick case and gave to the representative of the Keeler, of Cayuga county, Ohio, an outline of the testimony that he would swear to in March, when will be exposed the way his name was used in the wreck of a bank, the ruining of many lives and the death from a broken heart of Bank President Beckwith of Oberlin, Ohio. The interview with the representative of Mr. Keeler lasted an hour and a half.

SWINDLE AMUSES HIM

The great ironmaster was in his own home, at No. 1999 Fifth avenue, when the interview took place and in an animated way he discussed every phase of the Chadwick case, asking many questions of the interviewer. His marvelous ability to grasp details and in crowding into the hour and a half interview, the famous story in its entirety and when he finished he said it was the most remarkable story he had ever heard. He spoke of J. W. Friend, the Ellettsburg millionaire and his friends who were ensnared to the extent of \$500,000. This incident amused him greatly. "Why, those fellows," said he, "ought to have known that I manage always to have cash," about \$250,000, "that I can get without any previous notice. I don't borrow money by giving notes. Why, I was \$2,000,000 in debt on account

TO BETTER CREWS ABOARD STEAMERS

Congress Urged to Amend Navigation Laws Regulating the Manning of Ships.

PREVENT DISASTER BY HAVING SKILLED MEN

Both Slocum and Rio Janeiro Disasters Due Largely to Untrained Sailors.

(Journal Special Service.)

Washington, Feb. 13.—Congress is being urged to amend the laws regulating the panning of steamships so that disaster like that which befell the Slocum will be prevented in the future. In recent years the loss of life in sea accidents has been appalling and evidence produced at inquiries, as to the causes of these disasters, has invariably demonstrated that untrained and inefficient crews have been largely responsible for unnecessary loss of hundreds of lives.

PRINCE WILL BRING BIG CRUISER SQUADRON

(Journal Special Service.) London, Feb. 13.—The second cruiser squadron, under Rear-Admiral Prince Louis of Battenberg, is expected to be absent from England, for eight months on his first cruise, visiting among other places, the Atlantic coast of Canada and the United States. The force which is to make this long and interesting voyage will comprise the following ships, all of the most recent construction: The Drake armored cruiser with a sea speed of 24 knots and a displacement of 14,100 tons. The crew numbers 900. The Burwick, Cumberland, Cornwall, Essex and another armored cruiser of the same type, to be assigned, complete the squadron. These five sister ships have a speed of 23 knots and each mounts 14 6-inch quick-firing guns, besides a number of smaller weapons.

BANDON WANTS SUNDAY MAIL

(Journal Special Service.) Bandon, Feb. 13.—The Bandon chamber of commerce chose Col. C. T. Buzanover to collect exhibits from this section of Coos county for the Lewis and Clark Centennial exhibition, and George P. Topping to represent the chamber to manage the exhibits. The chamber also decided to make an effort to have changed the mail schedule at this place, whereby the mails may arrive at 10:30 a. m. instead of at 4:30 p. m. the present schedule, and to secure a Sunday mail.

DEATH COMES IN SLEEP

(Journal Special Service.) Dallas, Feb. 13.—M. C. McDermitt, a bachelor, who lived six miles from Dallas on J. W. Myers farm, was found dead in his bed yesterday afternoon by Mr. Myers. Heart trouble was the cause of death. Mr. McDermitt was 65 years of age and has lived in Polk county 28 years. He was buried today.

BILKINGTON—SADKINS IS GREAT HAND TO BORROW TROUBLE

Pittsburg—Well, Banker Beckwith would be a good man to apply to just now.

TABER TRACTION ORE MINED BY COLUMBIA

(Special Dispatch to The Journal.) Sumpter, Or., Feb. 13.—Operations at the Taber Traction continue from the lower levels of the Columbia mine, giving a depth of 1,100 to 1,200 feet. The owners do not state what results are attained in this work, but it is generally understood that a high-grade ore is being mined. The Traction occupies a depth of 1,100 to 1,200 feet. The Cracker creek lode between the E & E and the Columbia ground, being one of those pieces left in setting original shafts, through lack of accuracy on the part of the prospectors. When the steel surface ore was discovered by Geiser and Hendry, a shaft was put down to the 80 level, after which an arrangement was made with the Columbia management for entering Taber Traction ground at depth through Columbia workings. Since this work began, little has been learned of what character of ore was mined, but public rumor has it again that the grade is richer than usual.

DOUBLE SHIFT AT THE SMELTER THIS WEEK

(Special Dispatch to The Journal.) Sumpter, Or., Feb. 13.—About the middle of this week the smelter management has arranged to put on double shifts, doubling the capacity of the plant. All of the bins at the smelter are filled, and the management has been forced to adopt many expedients to accommodate the daily tonnage. After two shifts start at the furnace, the surplus will be worked off, and until receipts increase further, the smelter will be able to handle ore as it is delivered. The management believes in carrying full bins, to guard against bad road conditions of the spring. New bins have been arranged for and these will be kept full while deliveries are constant.

TEST OF OIL PROCESS AT LE ROI IS NOT FAIR

(Special Dispatch to The Journal.) Roseburg, Or., Feb. 13.—There is a controversy between the management of the Le Roi No. 2 mine, of this district, and the managers of the Elmore oil concentrating process. Le Roi No. 2, as the world knows, gave the process an

FOLEY'S HONEY AND TAR CURES

Coughs and Colds PREVENTS Pneumonia and Consumption

Foley's Honey and Tar not only stops the cough, but heals and strengthens the lungs and prevents serious results from a cold.

There is no danger of Pneumonia, Consumption or other serious lung trouble if **Foley's Honey and Tar** is taken, as it will cure the most stubborn coughs—the dangerous kind that settles on the lungs and may develop into pneumonia over night.

If you have a cough or cold do not risk Pneumonia when **Foley's Honey and Tar** will cure you quickly and strengthen your lungs.

Remember the name—**Foley's Honey and Tar**—and refuse any substitute offered. Do not take chances with some unknown preparation that costs you the same when you can get **Foley's Honey and Tar**, that costs you no more and is safe and certain in results. Contains no opiates.

Cured After Physicians Said He Had Consumption.

E. H. Jones, Pastor M. E. Church, Grove, Md., writes: "About seven or eight years ago I had a very severe cold which physicians said was very near pneumonia, and which they afterwards pronounced consumption. Through a friend I was induced to try a sample of **Foley's Honey and Tar**, which gave me so much relief that I bought some of the regular size. Two or three bottles cured me of what the physicians called consumption, and I have never had any trouble with my throat or lungs since that time."

Three sizes—25c, 50c, \$1.00. The 50 cent size contains two and one-half times as much as the small size and the \$1.00 bottle almost six times as much.
