

SCHOOL BOYS SWEEP VANCOUVER STREETS

Youthful Vancouverites whose pride makes city's thoroughfares beautiful.

(Special Dispatch to the Journal.) Vancouver, Wash., May 7.—Probably one of the most unique undertakings ever carried to a successful finish was the cleaning up of the streets of the residence district of Vancouver by the public school boys on Friday afternoon last. The accompanying photograph shows a group of the youthful workers as they were ready to start out armed with brooms and hoes.

The cleaning up movement was started by the Vancouver Civic Improvement association, which did good work last year. With the able cooperation of Professor C. W. Shumway of the high school, Chat Knight and the city council, Friday's work was carried out without a hitch. The city council furnished teams to carry off the garbage and Professor Shumway presented the idea to the boys.

SOCIETY WOMEN CALLED TOOLS

Rev. Anna H. Shaw Says They Are Unwittingly Victims of Smooth Politicians.

INTENTIONS GOOD BUT THEIR CONCEPTION WRONG

In Speech at People's Forum Prominent Suffragist Says Social Duties Keep Society Women From Studying Woman Suffrage Properly.

Rev. Anna H. Shaw was the principal speaker at the People's Forum last night. Mrs. Shaw has charge of the field work for the equal suffragists during the campaign. The basis of her speech was a letter, which has been sent to the various business houses of the state by the Oregon State Association Opposed to Extension of Suffrage to Women. The letter is as follows: "One of the serious objections to the adoption of the woman suffrage amendment at the June election is the injury which it would undoubtedly bring to the business interests of the state. In connection with the initiative and referendum, it would result in much bad legislation. Its adoption would alarm the cautious investor, and would discourage the construction of new lines of railway and other enterprises which promise much for the prosperity of the state. For these reasons the Oregon State Association Opposed to the Extension of Suffrage to Women invites an expression from the business interests of the city of Portland in opposition to the proposed amendment. For this purpose our representative will call upon your house within a few days, and we write you to request you to join with other business houses of the city in a public statement of the attitude of the business interests of the state on this subject. We believe such a statement will be of the greatest value in the campaign against the amendment. Very truly yours,

REPORTER ASKED TO SEE CARDINAL'S WIFE

Humorous Mistake of Man Who Now Ranks High in the Journalistic World.

H. E. Warner, who is in Portland representing Sara Bernhardt, was formerly associate editor of the Baltimore News. Yesterday to some friends he related a story of Stewart Oliver, the present managing editor of the News, whose rapid rise in journalism has attracted much attention in the east. Mr. Warner says less than three years ago Mr. Oliver reached Baltimore from the wilds of Virginia. He was as green as the pine trees of his native state. "One of the first assignments," said Mr. Warner, "that Oliver got after reaching Baltimore was to go to see Cardinal Gibbons, the head of the Catholic church, whose home is on North Charles street. "Ringing the doorbell of the cardinal's residence, which is attached to the cathedral, he was ushered into the presence of Father Mitchell, secretary to the cardinal, a most learned man. Addressing him Oliver asked: "Is Cardinal Gibbons in?" "Father Mitchell replied: "The cardinal is out of the city." "Determined to get an interview out of some one Oliver blurted out: "Well, is Mrs. Gibbons home?" "It took Father Mitchell just a moment to recover. He then took Oliver into his study and gave him a plain but impressive lesson on the laws, doctrines and rules of the church."

GOVERNOR CHAMBERLAIN ADDRESSES BIG CROWD

Governor Chamberlain is continuing his campaign today, speaking at Halsey at 1 o'clock this afternoon and at Harrisburg this evening. News has been received that a large attendance greeted him at Halsey and his speech was received with approval and enthusiasm. He showed the taxpayers the reduction in taxes that has been made during the administration. His audience are composed of Republicans in large numbers as Democrats. The governor will be at the state house tomorrow and it is likely that his next public appearance will be east of the mountains. Charles V. Galloway, who has already begun a brilliant fight for congress against W. C. Hawley, made an address in Lincoln county at 1 o'clock this afternoon and will speak at Corvallis tonight. Dr. Withcomb, the Republican candidate for governor, also speaks at Corvallis today.

W. W. Cotton Discusses Its Possibilities in the Willamette Valley.

NEED OF MORE PROTEIN IS FELT BY STOCKMEN

During Period of Twelve Weeks in Summer There Is None But Dry Food for Cows—Alfalfa May Solve Difficult Problem.

W. W. Cotton has written a bulletin on "Alfalfa in the Willamette Valley" that is being widely circulated by the Southern Pacific Railroad company and is arousing much interest among western Oregon farmers, from Portland to Roseburg. Mr. Cotton writes from his experience as a dairyman and discusses the difficulty of securing green food during a period of about 12 weeks in summer known as the dry season in this valley. "In the spring there is an abundance of green food in the form of grass, clover and vetches. But when this disappears in the middle of summer a radical change takes place from green to dry food, and the milk flow is cut down," he says. "If some green food could be supplied during this period each cow would go into the fall giving several pounds more of milk, and this increased milk flow would manifest itself throughout the entire winter. Any crop yielding such green food is therefore valuable not only as food during this dry period, but also for the effect it produces upon the winter flow of milk. Alfalfa upon the importance of protein in food for cows, and gives tables showing that alfalfa is next to bran and shorts in its proportion of protein, besides being a green forage. The function of protein is to supply the lean flesh, tendons, nerves, hair, horns, wool and the casein and albumen in milk. No substance that is free from nitrogen can be converted into protein or be a substitute for it. Alfalfa contains 16 per cent of protein, and 100 pounds of alfalfa will supply six pounds of digestible carbohydrates to one pound of protein. If carbohydrate stuffs are fed to excess without increasing the protein there will be a wasteful shrinking of the flow of milk. This happens during the dry summer period in the Willamette valley, and to prevent it Mr. Cotton and others interested in maintaining the existing business of alfalfa are trying to encourage the growing of alfalfa. A fund of \$5,000 has been appropriated by congress to be expended in carrying on investigations and experiments, and irrigation in the valley, and A. F. Stover, of the drainage and irrigation investigations department of the government has been assigned to conduct the work. In addition, the Southern Pacific Railroad company will seed alfalfa on five-acre tracts for individual farmers in various sections of the valley for the purpose of securing practical illustrations of the proposition and encouraging farmers to grow alfalfa wherever it is or can be made feasible. The state agricultural college at Corvallis will assist by furnishing inoculated soil wherever necessary, from the state's experimental station fields at Corvallis. Mr. Cotton gives the following table showing the number of pounds of dry matter and digestible nutrients contained in 10 pounds of each of the food-stuffs named:

WRITES BULLETIN ON ALFALFA

W. W. Cotton Discusses Its Possibilities in the Willamette Valley.

NEED OF MORE PROTEIN IS FELT BY STOCKMEN

During Period of Twelve Weeks in Summer There Is None But Dry Food for Cows—Alfalfa May Solve Difficult Problem.

W. W. Cotton has written a bulletin on "Alfalfa in the Willamette Valley" that is being widely circulated by the Southern Pacific Railroad company and is arousing much interest among western Oregon farmers, from Portland to Roseburg. Mr. Cotton writes from his experience as a dairyman and discusses the difficulty of securing green food during a period of about 12 weeks in summer known as the dry season in this valley. "In the spring there is an abundance of green food in the form of grass, clover and vetches. But when this disappears in the middle of summer a radical change takes place from green to dry food, and the milk flow is cut down," he says. "If some green food could be supplied during this period each cow would go into the fall giving several pounds more of milk, and this increased milk flow would manifest itself throughout the entire winter. Any crop yielding such green food is therefore valuable not only as food during this dry period, but also for the effect it produces upon the winter flow of milk. Alfalfa upon the importance of protein in food for cows, and gives tables showing that alfalfa is next to bran and shorts in its proportion of protein, besides being a green forage. The function of protein is to supply the lean flesh, tendons, nerves, hair, horns, wool and the casein and albumen in milk. No substance that is free from nitrogen can be converted into protein or be a substitute for it. Alfalfa contains 16 per cent of protein, and 100 pounds of alfalfa will supply six pounds of digestible carbohydrates to one pound of protein. If carbohydrate stuffs are fed to excess without increasing the protein there will be a wasteful shrinking of the flow of milk. This happens during the dry summer period in the Willamette valley, and to prevent it Mr. Cotton and others interested in maintaining the existing business of alfalfa are trying to encourage the growing of alfalfa. A fund of \$5,000 has been appropriated by congress to be expended in carrying on investigations and experiments, and irrigation in the valley, and A. F. Stover, of the drainage and irrigation investigations department of the government has been assigned to conduct the work. In addition, the Southern Pacific Railroad company will seed alfalfa on five-acre tracts for individual farmers in various sections of the valley for the purpose of securing practical illustrations of the proposition and encouraging farmers to grow alfalfa wherever it is or can be made feasible. The state agricultural college at Corvallis will assist by furnishing inoculated soil wherever necessary, from the state's experimental station fields at Corvallis. Mr. Cotton gives the following table showing the number of pounds of dry matter and digestible nutrients contained in 10 pounds of each of the food-stuffs named:

Table with 4 columns: Foodstuff, Dry Matter, Protein, Digestible Nutrients. Rows include Alfalfa Hay, Timothy Hay, Barley, Wheat, Bran, and Protein in Hay.

From this table it will be seen that 10 pounds of alfalfa hay contains more digestible protein than is contained in the same number of pounds of either barley, oats or wheat, and that bran and shorts contain more protein than alfalfa hay simply because some of the carbohydrates contained in the wheat has been removed by the process of milling. The following table will serve: "Take a little soil from the field and place it in a saucer. Moisten the soil well in water and place in it a piece of blue litmus paper. If within 24 hours the litmus paper changes to a red color the soil is acid and should be corrected by the application per acre of about 1,000 pounds of air-lacked lime. If the litmus paper remains blue, then the soil is not acid and the addition of lime is not necessary. The most favorable soil is a rich, sandy loam, warm and friable, with a deep and loose or gravelly subsoil. A dense clay or hardpan subsoil is unfavorable. Although a rich soil is preferred, alfalfa sometimes does well on poor but well-drained gravelly soil. While the plant requires much water, it will not flourish where the ground is saturated or flooded. Where the water level is near the surface or where the surface water from heavy rains does not drain off rapidly, alfalfa usually fails. The water table should not come nearer than four feet of the surface of the ground in the spring when the alfalfa is in an active stage of growth. An alfalfa field is injured from being submerged by an overflow, and is killed if the water remains over the surface for too long a period, ordinarily alfalfa will not withstand an overflow of more than a few days."

GO EAST TO CHOOSE DR. WISE'S SUCCESSOR

For the purpose of selecting a successor to Dr. Stephen S. Wise, Joseph Simon and D. Solis Cohen, representing the committee in charge of the selection, will leave for the east tomorrow. They will visit Chicago, Boston, New York and other cities in the hope of finding a suitable rabbi to occupy the pulpit of Temple Beth Israel. It is said that Dr. J. H. Landeau of Boston, who occupied the position temporarily, may be called to the pulpit of Portland's leading synagogue. It is known that he created a good impression during his brief visit here.

PORTLAND'S NEW DEPARTMENT STORE

Entire Corner Third and Yamhill Don't Worry—Watch Us Grow—DOUBLE DAY TOMORROW Special double discount will be given with every purchase tomorrow (Tuesday). Following are a few of the many bargains that should bring you to this great store:

Ladies' Dept. Ladies' Fancy Corset Covers, lace trimmed, 2 rows of insertion; a bargain at 50c. MAY ADOPT PLAN OF DAGGETT

City Officials Discuss His Ideas for Constructing New Crematory of Steel.

OLD STRUCTURE IS IN DANGER OF COLLAPSING

Superintendent Favors Erection of a Plant of Fifty Tons Daily Capacity to Handle Garbage of City—His Plans Being Considered.

Portland will soon have a new garbage crematory. This was the decision arrived at by the city board of health and the health and police committee of the city council at a caucus held in the office of Dr. George Wilson. Those present were Dr. Wilson, Dr. Esther Fohl and Mayor Lane of the city board of health, Councilmen Shepherd and Belding of the city council and Superintendent Daggett of the crematory. Superintendent Daggett reported that there was a trial for an alleged article of collapsing, which would leave the city without any plant in which to dispose of its refuse. He favored the erection of an all-steel crematory plant of 50 tons a day capacity, which he thought would be sufficiently large to handle the garbage of this city for several years. The health officials and the members of the council were confronted by the statement that there were no funds available to meet the expense contemplated because all the money had been tied up by specific appropriations by the city council on the first of the year leaving nothing for emergencies. The two members of the council who attended the meeting finally decided that they would recommend to the council that the appropriation ordinances be changed so that a portion of the funds in the city treasury could be spent in building a crematory, and that such a plant to cost \$15,000 be erected. It is understood that these recommendations will be presented to the city council at its next meeting.

ATTORNEY LORD PLEADS FOR SPEEDY HEARING

Attorney Charles Lord pleaded again in the United States district court this morning for a trial. His plea was denied. He is indicted and must some day stand trial for an alleged participation in a conspiracy to malign Francis J. Heney, special United States prosecuting attorney. The indictment was brought on July 25, 1905, and the trial has not taken place. Heney is now in Washington, D. C. Judge Wolverton said that until Heney gave the word the case would not be heard.

Vernon, Vernon. Vernon, one of Portland's most substantial suburbs, is enjoying an exceptionally large growth. Situated as it is within the city limits, and of the highest altitude, it commands attention from prospective home buyers. The lots are sold on easy payments and although the values are rising rapidly, there will be no increase on the selling prices for the next week or two, and as an investment solely or for home sale, this property offers unusual inducements.

DEMOCRATIC HEADQUARTERS FORMALLY OPENED

County Central Committee Will Make Organization in All Precincts.

The Democratic county central committee formally opened its headquarters this morning at 127 Seventh street and from this time on the chairman, George H. Thomas and Secretary John T. Miller, with a corps of assistants and clerks, will be constantly at the place at work. Mr. Thomas said this morning that the county committee would make an aggressive fight in Multnomah county and the first step would be to make a thorough and efficient organization in all the precincts. The new headquarters are on the ground floor and are large and convenient. The county central committee will hold a meeting at county headquarters Wednesday night when the committee on platform will make its report. This committee is composed of Newton McCoy, Colonel C. E. B. Wood and John B. Ryan. The Multnomah Democratic club and the Young Men's Democratic club have been invited by the county central committee to hold their joint meeting Friday night at the Democratic county headquarters. This meeting was arranged for the purpose of ratifying the nominations for the state and county offices. Itching piles provoke profusely, but profusely won't cure them. Doan's Ointment cures itching, bleeding or protruding piles after years of suffering. At any drug store. Preferred Fresh Canned Goods. Allen & Lewis' Best Brand.

CORRECT and INEXPENSIVE

THE LINES OF Spring Clothes For Men and Young Men

We show this season demonstrate the highest class of materials, designing and tailoring. They are certainly swell. Yet they cost no more than the average kind. Besides, you can select your suit, coat, trousers, vest, hat and shoes and pay for same at the easy rate of

\$1.00 A WEEK
