

WONDERFUL CITIES BUILT BY ANTS

Insect Architects Whose Well Built Comfortable Homes Excite the Interest of Scientists—The Ant, Seen at Close Range, Offers Many Valuable Suggestions to Man

The Sentry on the Look-Out.

A Section of an Ant-Hill, Showing How It is Divided. The Black Part Shown is Above Ground Level and the Shaded Part Below.

THE most wonderful, the smallest, and yet the most populated cities in the world are those built by millions and millions of ants. Forests rarely trodden upon by the foot of man are the spots in which these tiny, intelligent insects love to rear their cities and palaces. To such undisturbed places they flock in millions. An ant city consists of dozens of mounds of earth reaching to a height of four or five feet, and having a circumference of ten to twenty feet.

Nine inches or so from the main entrance galleries branch off in every direction, and lead to rooms of different sizes, according to the purpose for which they were constructed. Some rooms are two inches long, three quarters of an inch high, and an inch or more in width.

The Dairy and the Milkmaids. Below the first floor are a dozen others, all connected by slanting passages like staircases, and on every floor, again, are many rooms—bedrooms, dining rooms, playrooms, storerooms, and on one floor even a graveyard. Deep down in the earth are the abodes of the cattle—the aphids or milch cows, and the honey cows, which are certain tiny insects.

Three Grades of Citizens. In each house are three grades of people—the kings and queens; the aristocrats, at whose bidding are armies of well-trained soldiers and police, equipped with most powerful jaws; and the workers, the real builders of the house, the food-suppliers, and menials.

These ants are a marvelous people. They do not know what failure means. If a pole or a stick stands in their way, an ant will run for help, and return with an army that never rests until the obstacle is removed.

responsibility begins. Led by the queens and their consorts, the young ants leave their palace in a great swarm, and fly high in the air. That marks the point where responsibility enters their life.

These ants are a marvelous people. They do not know what failure means. If a pole or a stick stands in their way, an ant will run for help, and return with an army that never rests until the obstacle is removed.

Methodist. Central—Russell and Kerby streets; Rev. J. T. Abbott. Class meeting, 9:45 a. m.; 10:30 p. m.; preaching, Sunday, 12 m.; Epworth League, 7:45 p. m.; 7:45 p. m. sermon.

The Corey & Cook Motor Car company are now housed in their new garage, Fifteenth and Washington streets. This institution is the largest of its kind west of Chicago and can accommodate 125 machines.

GENERAL ASHE AND STAMPACT

By Rev. Thomas B. Gregory. As we have noted the use of stamps for raising revenue were introduced into England from Holland in the reign of William and Mary.

In 1765 it was proposed to Walpole that he impose the stamp law upon the colonies, but the great minister replied, 'I will leave the taxation of America to some of my successors who shall have more courage than I have.'

In the meantime two merchant vessels coming into port were seized by a British warship because their papers were not stamped. Calling out the New-Haven militia, General Ashe made a visit to the royal governor, and informed him that he had come for a redress of the people's grievances.

CHURCH SERVICES

Immanuel—Second and Meads streets; Rev. G. W. Griffin. At 10:30 a. m. and 7:30 p. m.; preaching, Bible school, 12 m.; Young People's society, 8:30 p. m.; Epworth League, 7:30 p. m.
