

Assays Have Been Made From \$24 on the Surface to \$203.28 and Up to \$1,500 and \$2,600 to the Ton

The Garvin Cyanide Extraction Company, 186 Morrison Street, near the bridge, have made these assays, which guarantees their absolute correctness.

Shares 10 Cents Each—Par Value \$1.00—Fully Paid Up—Non-Assessable—Sold for Development Purposes Only

The company reserves the right to increase the price of shares at any time without notice. Mail orders promptly filled

OFFICE FIRST FLOOR WEATHERLY BUILDING, 360 EAST MORRISON STREET, PORTLAND, OR.

500 INVESTED LESS THAN THREE YEARS AGO IS NOW WORTH \$100,000!

It seems preposterous, don't it? But more than that, the man who bought \$2,600 worth of Mohawk shares then, can now pull down

ONE MILLION THREE HUNDRED AND SIXTY THOUSAND DOLLARS!
There is no fancy about this. The cash can absolutely, actually and positively be had AT ANY MINUTE OF THE BUSINESS DAY! There is no guessing about it. Mohawk stock is now selling at \$17 per share. It first sold at 24 cents. Get out your paper and pencil and figure it out for yourself, and you will discover the

STUNNING PROFITS ACCRUING TO HOLDERS OF STOCK IN REAL MINES.

We have the real mines. We own five claims of 20 acres each. We do not owe a dollar. We are not professional dealers in stocks. We are selling shares in our own claims, and only for development. Every cent of the proceeds goes into machinery, equipment and labor in sinking the shaft. We have not a salaried officer in the company. We look upon all moneys received for shares as the property of our stockholders. It is not our private property any more than dividends, unparalleled in the history of the world, of the Mohawk, is the property of the Mohawk's management. This dividend must be distributed monthly, with all the carefulness and accuracy of a bank. We shall deal with our stockholders on this basis.

OUR COMPANY IS COMPOSED OF SOME OF THE BEST MEN OF BUSINESS CHARACTERS.
No one has ever questioned the uprightness of any of them. They stand before the community as the personification of integrity and loftiness of purpose, as proof of which the largest buyers of Butte Boys Consolidated Mining Company shares are their relatives, business associates, and most intimate friends and acquaintances. It is these relatives, these friends and these acquaintances that have made it possible for the company to sell its shares in greater volume than such securities ever were sold by any corporation in the history of Oregon.

OUR MINES ARE REAL! OUR MINES ARE ACTUAL! OUR MINES ARE SOVEREIGN!

Our prospects are precisely as good as those of the Mohawk, when it was developed now. One of the principal operators of the Mohawk says so, and he ought to know. His mine is producing fortunes every day. He declares that our ore is the exact counterpart of his when his shaft had reached the same depth ours is at present. He says we are selling our stock too low—that it is worth double what we are asking for it. Perhaps it is. It is easy to believe that the gentleman is right, and

WE DO NOT PROMISE THAT OUR PROFITS SHALL BE MAINTAINED FOR ANY LENGTH OF TIME.

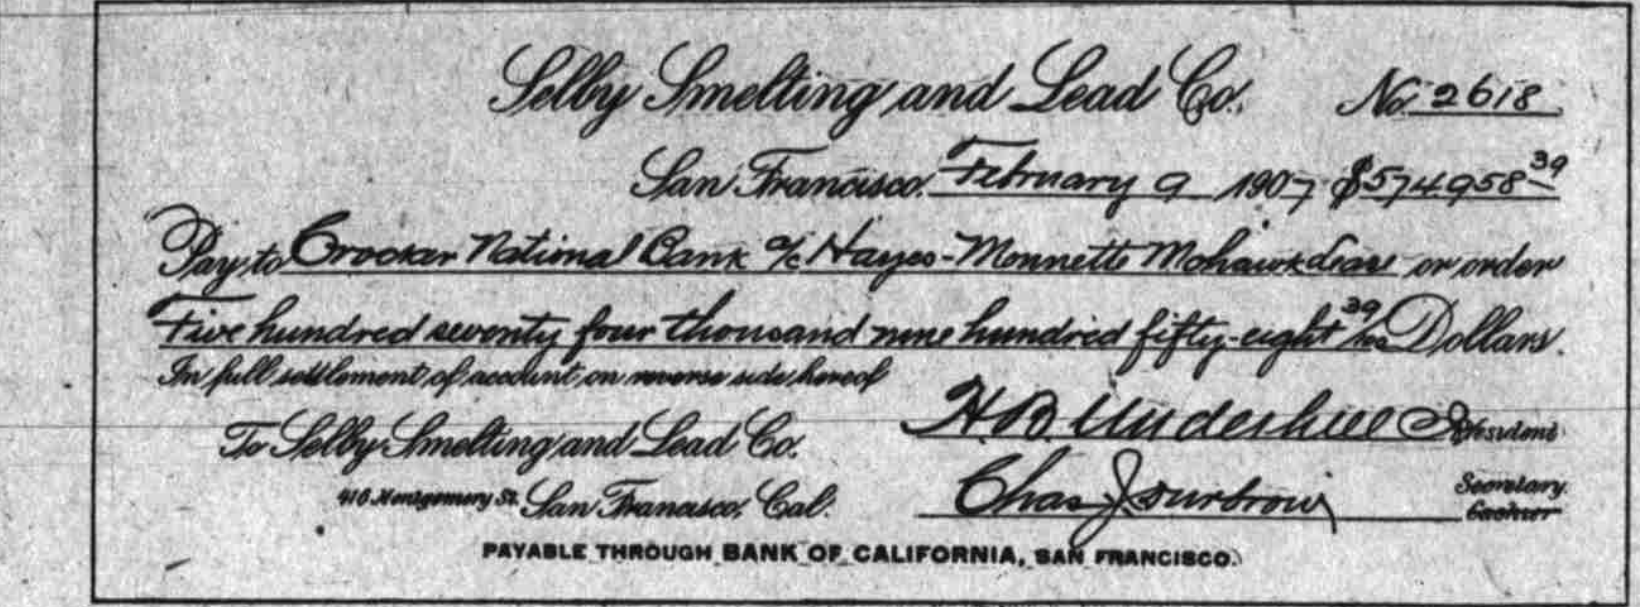

We may raise them any day, but this price is taken 10 cents will be the price—not a farthing more, not a penny less.

NO TECHNICAL TERMS.
We make no use of technical or mystifying terms in our advertisements, claiming no desire to mislead. The only technical terms are that we have Real gold claims; that we are developing them with the proceeds of our stock sales; that our assays show that we have not as yet found a pound of bar silver, that the employment of thousands on the surface is as high as \$2,000 farther down, and that its value is increasing with depth. We have shown that we are the minds of investors in our stock. It is their money that is making us rich. Our claims are in that region and ought not to be considered until our people are getting all there is in it.

Almost every day the office of The Butte Boys Consolidated Mining Company is besieged with verbal and mail inquiries concerning its properties and its exact location. It is not surprising that we have found it impossible to separately describe the property for the purpose of imparting to all inquirers such information as suggests itself as of importance to such investors, or to those contemplating such investment.

The Butte Boys Consolidated Mining Company is an Oregon corporation, organized under the existing mining laws of this state; its capital is \$1,000,000, representing 1,000,000 shares of its stock of the par value of \$1.00 per share, these shares being non-assessable. It owns five gold mining claims in the Goldfield, Nevada mining district, each of which contains an average of twenty acres, upon which there is absolutely no indication of the presence of any mineral. One of these claims, called the "Nancy" claim, was discovered by the late prospectors, and was held by them until they had discovered the mineral in it, these being among the earliest locations in this now extravagantly profitable mining camp. For three years the California mining company, under the direction of its officers, pursuing all efforts, however attractive, to obtain title to these claims, was unable to develop their claims or do more than the required assessment. They declared that "We have found what we have been prospecting for for years, and will not dispose of it until it can be further enriched and we go out with a few thousand dollars to search for other claims. We are not in the least gold-bearing and of extreme value. We feel that we have come to the parting of the ways between poverty and wealth, and we will hold these claims until the crack of doom before we will sell them for less than a fortune that will maintain and support us the rest of our lives."

Often and often were the stubborn miners approached by men of various kinds and characters, seeking to buy these claims, or to lease them, or to have a trading or selling man. About three years ago a Mr. J. M. Ross, a gentleman of Portland, Oregon, and friend of the Butte Boys Consolidated Mining Company, being

"Your Showing Is Just as Good as Ours"

The above is a fac-simile of a check for two carloads (47 tons) of ore shipped by the lessees of the Mohawk gold mine, Goldfield, Nevada, to the Selby Smelting Company, San Francisco, on January 21, the smelting being concluded and the check written on February 9, the entire transaction, from the time the ore left the mines till the proceeds were handed to the operators, requiring but 20 days.

Speaking with the manager of the Butte Boys Consolidated Mining Company, on March 9, as they stood beside the shaft being sunk on one of the Butte Boys five claims, one of the lessees of the Mohawk used this language:

"Your prospects are fully equal to ours when our mine was at the same stage of development as yours; your ore is of the same character as ours, and I see no reason why your mine should not equal ours in all respects. My only criticism would be that you are selling your shares too cheap. Your position is different from ours at the beginning. We had no criterion to go by in fixing values. No other mine in the neighborhood had been developed sufficiently to establish the quality of the rock, and our only information as to the richness of our claim was contained in our assays, and your assays are, in all cases, encouraging as ours, and in some better. You people can determine, to almost a mathematical certainty, the productiveness of your ore, because they are as near like ours, almost, as two peas are like one another. YOUR SHOWING IS JUST AS GOOD AS OURS, and that is saying all that could be said of any mine on earth, before it actually had begun to ship its ores."

Mohawk first sold at 24 cents; \$150 worth of stock bought at 24 cents and sold at \$17 would net the investor \$203,850.00! We predict that when the Butte Boys becomes a shipper its shares will be worth exactly as much as Mohawk.

Would You Like to Make That \$200,000.00?

THE GOVERNMENT BUYS IT.
The only metal produced that has the government for its market and the only one that never fluctuates in value, is gold. This cannot be said of silver, copper or zinc diamonds, but gold is always in demand, and the products of gold mines, whether in panic or prosperity, is always the same. The government is always buying gold, and it is always buying gold stock. It is always buying gold stock, and it is always buying gold stock. It is always buying gold stock, and it is always buying gold stock. It is always buying gold stock, and it is always buying gold stock.

WILL LAST FOR CENTURIES.
The area, within which Goldfield lies, is the largest porphyry belt between Virginia City and Butte, and is at least 15 miles long and about 7 miles wide. It affords room for nearly 3,500 locations of 20 acres each, any one of which may contain the banner mine of the world. Goldfield's matchless Mohawk, should mines come into being at the astonishing rate of 10 producers to the year, it would take 350 years to get the ground developed and proved, and if but 1,000 mines were to be developed, it would take 350 years to get the ground developed and proved. The employment of thousands of men per year would be assured for centuries.

THE MANY DONALDSONS.
This great mine, so rich that no stranger is permitted to get near it, is holding its rights from the state under the name of the spot where we are sinking our shaft. Its ores are guarded by armed men from that the claims belong to them, at the reach the smelter. Absolute secrecy is maintained concerning its output, for what purpose the claims belong to them, at the reach the smelter. Absolute secrecy is maintained concerning its output, for what purpose the claims belong to them, at the reach the smelter. Absolute secrecy is maintained concerning its output, for what purpose the claims belong to them, at the reach the smelter.

AN OPEN LETTER TO THE PUBLIC

with the least possible delay. On March 5 the manager boarded a train in Portland, and at midnight of March 5 had reached his destination. On March 6 he visited and inspected the mine already done on the shaft, being sunk, and before retiring that night had left the Messrs. Callahans the contract for its continuation to a depth of another 100 feet, with the necessary crosscuts in all directions. Material and appliances were produced within the next 54 hours, other men were taken into the proposition, and became owners of stock so that they might be free from the labor troubles then apparently coming into life, and since that date work has been prosecuted day and night. Trembling of the workmen have, therefore, no part in the development of these claims. The only people who have any interest in the property on which he works, and is therefore not within the jurisdiction of the miners' organizations. Every shareholder in, of course, a part proprietor of the mine, and the union organizations do not pretend to prohibit a man from working for himself.

Interested and thoughtful ones, especially persons at all acquainted with mining, will understand that the company will be increased by our own bodies. This can only be developed by development, but judging our mines by

EVEN THE GREAT MOHAWK IS OUTCLASSED

The Goldfield News, one of Nevada's brightest and most reliable newspapers, of March 16, says:
"The Mohawk has heretofore been accounted the greatest known gold mine in the world and the Combination Fraction was a close second, but developments of the past week have proven that the Florence is easily head and shoulders above either of them. A conservative sampling of the ledge in the Little Florence lease yesterday returned plenty of \$60,000 ore. Four feet will return far into the thousands and the remaining 18 feet of the ledge will ship better than \$1,000 to the ton. The sulphides in the vein are rich, but the free gold is richer. It runs through the rock in every direction, and not in narrow seams. It is a jewel casket in every sense of the word. The first shipment was made yesterday to the local reduction works. It consisted of five tons of specimen rock, estimated to run \$10,000. There are 40 more tons ready to send out, and this shipment alone will be sufficient to declare a dividend on, while there has not been a single foot of stopping done."

We most certainly believe that within a very few months similar mention will be made of the Butte Boys. Our development work is proceeding day and night. It will not take long for the contractors to reach pay rock. In fact, within two or three months our shaft will have reached a depth that will likely show results the equal of any of our neighbors. It cannot, it seems, be otherwise.

MINES ARE POPPING UP ALL AROUND US—LIKE BULLETS FALLING ON A BATTLEFIELD.
We will soon be found in the thick of this good fortune.

Money in Mining Stocks

- \$5 invested in Goldfield Mohawk shares at first hands would now be worth \$3,400.
- \$10 invested in Goldfield Mohawk shares at first hands would now be worth \$6,800.
- \$20 invested in Goldfield Mohawk shares at first hands would now be worth \$13,600.
- \$40 invested in Goldfield Mohawk shares at first hands would now be worth \$27,200.
- \$80 invested in Goldfield Mohawk shares at first hands would now be worth \$54,400.
- \$100 invested in Goldfield Mohawk shares at first hands would now be worth \$68,000.
- \$150 invested in Goldfield Mohawk shares at first hands would now be worth \$102,000.
- \$200 invested in Goldfield Mohawk shares at first hands would now be worth \$136,000.
- \$400 invested in Goldfield Mohawk shares at first hands would now be worth \$272,000.
- \$500 invested in Goldfield Mohawk shares at first hands would now be worth \$340,000.
- \$1,000 invested in Goldfield Mohawk shares at first hands would now be worth \$680,000.
- \$2,000 invested in Goldfield Mohawk shares at first hands would now be worth \$1,360,000.

We mention the Mohawk because it is in the same district as the Butte Boys Consolidated and for the further reason that one of the operators declares that at the same stage of development our showing is precisely as excellent as the Mohawk's was. He says that our assays are the equal of the Mohawk's, and in some instances a good deal better.

Our Stock Is Now Selling at 10 Cents Per Share

How would you like to share with us in a deal like this? We are not pleading with anybody to buy our stock. We are merely offering it as an investment. Better get your share before the price goes up. We believe the Butte Boys will be duplicating these profits within a year. We know of no reason why we should not.

part in any other mining camp in the world. He certainly would be an optimist of the left if he thought that people would always expect results such as those that have come from the Mohawk. He is not a prophet, but a man who has seen the results of the stoneware of ten producers a year, it would take 350 years to get the ground developed and proved, and if but a thousand mines should result, the employment of thousands of men per year would be assured for centuries. This statement is unequivocal and is that Goldfield is a gold field in fact—that anywhere beneath the surface of the earth the foundation of which is solid rock, will be found gold in abundance, a prediction so far verified in every instance where shafts have been sunk. In fact a groundless in this belief in the hearts of the people that use a claim as for sale in the Goldfield district, and not a foot of ground remains untaken.

Assays of Butte Boys ore have so honored up the hopes of friends of the management that in almost every instance where buyers could afford it, first purchases have been increased—double, triple, four times, ten times, twenty times, fifty times added to. The Garvin Cyanide Extraction Company, 186 Morrison street, has made nearly all its assays, and now is a single instance have the ore proven barren. This is most remarkable and has not a counter-

As were others. With assays of nearly \$1,000 to the ton, the Callahans would not have thought of letting go. We look upon ourselves as singularly fortunate in having our friend, Ross, in Goldfield. It was through him that we were "set on" to "take up" the claim. Without his friendship and his valuable help up, we never should have heard of the Butte Boys. Without the inseparable friendship of those who are banded together to prosecute this enterprise, there would today have been no stockholders of the Butte Boys Consolidated Mining Company, and when the days of dividends are here, these shareholders are to have taken our paper at its inaugural value, will have reason to be proud of their shares in the Butte Boys. They will say for us that we are the men who have provided this avenue of investment.

Of one thing our shareholders may rest assured: The Butte Boys Mining Company is composed of a body of high-minded citizens who have been transacting business with the honest community of Portland, some of these all their lives, and all for years. Most are in a professional degree, the stock of our character. Not one ever engaged in the promotion of mining or other shareholding propositions. Every member of our stock will say, when asked, and time shall ripen our mutual acquaintanceship, that we have given them a "square deal." They will say for us that we have given them a "square deal." They will say for us that we have given them a "square deal."

The Company's Mines of Nevada, which we own, are situated in the heart of the Goldfield district. On all sides are producing mines, and the Butte Boys Consolidated Mining Company is the largest purveyor of high-grade ore in the world. The Butte Boys Consolidated Mining Company is the largest purveyor of high-grade ore in the world. The Butte Boys Consolidated Mining Company is the largest purveyor of high-grade ore in the world.
