SOAP ON A HOOK

Novel Arrangement for Hanging Up the Soap When Not in Use.

A recent invention of a Chicago man, if universally adopted by all soap manufacturers, would eliminate the use of

soap cups and trays entirely. No matter how carefully the soap tray is drained a certain amount of water manages to adhere to the top, which tends to soften the soap and cause wastefulness. This wastefulness is impossible with the device shown in the accompanying illustration—a holder for the cake of soap. It is the purpose of the inventor to have each cake of soap contain one of these hangers, the latter being imbedded during the process of manufacture. The hanger is of wire, bent in the form of three loops and a hook, the outer loop entering outside the cake of soap. Obviously, the loop is employed to attach the cake of soap when not in use to a rack or hook.

MONARCHS FEAR REVOLUTIONISTS

These pictures show Queen Elizabeth and King Charles of Roumania, whose peasant subjects have revolted. There have been deeds of violence on the royal estates and the monarchs are closely guarded in their palace.

SAVED MARK TWAIN'S LIFE

Yet Dr. Meredith Was a Good Man and Meant Well, Says Clemens.

In the autobiography with which Mark Twain is enlightening the public has just been introduced to a hitherto unknown benefactor. His name is—or was—Meredith, and he was a country doctor in the Missouri village of Florida, where Mark Twain was a boy.

According to the autobiography medical attendance then cost next to nothing for the doctor worked by the night—\$25 for the whole family.

"I remember two of the doctors," says Twain, "Chowening and Meredith. They not only tended the entire family for \$25 a year, but furnished the medicines themselves. Good medicine, too. Only the largest persons could hold a whole dose. Caesar oil was the principal beverage. The dose was half a dipperful, with half a dipperful of New Orleans molasses added to help it down and make it taste good, which it never did."

"The next standby was calomel; the next, rhubarb, and the next, jalap. Then they bled the patient and put mustard plasters on him. It was a dreadful system, and yet the death rate was not heavy. The calomel was nearly sure to salivate the patient and cost him some of his teeth."

"There were no dentists. When teeth became troubled with decay or were otherwise ailing the doctor knew of but one thing to do; he fetched his tongue and dragged them out. If the jaw remained it was not his fault."

"Doctors were not called in cases of ordinary illness; the family's grandmother attended to those. Every old woman was a doctor and gathered her own medicines in the woods and knew how to compound doses that would stir the vitals of a castron dog."

"And then there was the Indian doctor, a grave savage, remnant of his tribe, deeply read in the mysteries of nature and the secret properties of herbs, and most backwoodsman had high faith in his powers and could tell of wonderful cures achieved by him."

"In Mauritius away off yonder in the solitude of the Indian ocean, there is a person who answers to our Indian doctor of the old times. He is a negro, and has had no teaching as a doctor, yet there is one disease which he is master of and can cure, and the doctors can't. They send for him when they have a case."

"It is a child's disease of a strange and deadly sort, and the negro cures it with a herb medicine which he makes himself from a prescription which has come down to him from his father and grandfather. He will not let anyone see it. He keeps the secret of its components to himself, and it is feared that he will die without divulging it; then

there will be consternation in Mauritius. I was told these things by the people there in 1856."

"We had a faith doctor, too, in those early days—a woman. Her specialty was toothache. She was a farmer's old wife, and lived five miles from Hannibal. She would lay her hand on the patient's jaw and say, 'Believe!' and the cure was prompt. Mrs. Utterback, I remember her very well. Twice I rode out there behind my mother, horseback, and saw the cure performed. My mother was the patient."

"Dr. Meredith removed to Hannibal by and by and was our family physician there, and saved my life several times. Still, he was a good man and meant well. Let it go."

"I was always told that I was a sickly and precarious and tiresome and ungovernable child, and lived mainly on allopathic medicines during the first seven years of my life. I asked my mother about this in her old age—she was in her 88th year—and said:

"I suppose that during all that time you were uneasy about me?"

"Yes, the whole time."

"'Afraid I wouldn't live?'"

"After a reflective pause—ostentatiously to think out the facts—"

"No, afraid you would."

History in Law Reports. The English and American lawyers and judges have worked out a wonderful system that must command the admiration of all who have competent knowledge of it.

This system is formed by the reports of the decisions of courts of last resort.

There are probably now some 12,000 volumes of reports, giving the disposition of hundreds of thousands of particular instances that have arisen in the actual course of the ever-changing relations in human affairs.

If every evidence of our civilization of the last 800 years should perish, says the American Lawyer, and there should remain only one set of the reports, all of our institutions, social, religious and political, and much of our science and philosophy, could be reconstructed from them by the "traveler from New Zealand."

The Republican leaders in New York City declare that if Hearst's Independent League puts a full ticket in the field this fall it will help the Republican candidates. The election in November will be for one justice of the supreme court, a sheriff, members of the assembly and members of the board of aldermen—almost as important to the politicians as the mayoralty year.

The trade union membership of Australia is said to be only about 100,000.

CAB WAS DRIVEN BY A PRINCESS

Society Mashers Pay Dearly for Effort to Flirt With Beautiful Princess.

AN HOUR'S DRIVE COST THREE HUNDRED FRANCS

French Vicomtesse Who Wants a Divorce but Would Rather Drive a Cab Than Accept Alimony From Husband Makes Application.

Paris, April 7.—After having made so much noise about our female cab drivers we have suddenly discovered that we had them a long time ago. The first woman cab driver seen in the streets of Paris was a beautiful lady, now dead, who, during the second empire, gained a great reputation for her charity and goodness to the poor, Princess Metternich.

Driving along the boulevards one day, the princess was accosted by two society mashers, who recognized her but thought to confuse her. They hailed her carriage, climbed in and, without looking at the lady, called out: "By the hour."

"Very good, my men," the princess replied in the most matter-of-fact manner, and for an hour she drove them around the Bois de Boulogne. When the hour was up the princess stopped and asked the men to dismount. Then, holding out her hand, she said:

"You know it costs 300 francs an hour to be driven by a princess! You did not ask my terms or I would have told you beforehand. I need the money for my poor, so I hope you will pay at once."

Feeling a bit ashamed of themselves, the men could do nothing but pay.

Aprons of "cocheres" as the female cabbies are now known, the latest applicant for a license is Vicomtesse de Fresnel-Rousseau, a beautiful woman of 34, well known in the salons of Faubourg St. Germain.

The vicomtesse is seeking a divorce from her husband, and that she may not need to accept any alimony from him she has entered her name for the position of horse management and photography, which all cab drivers must pass.

Youthful Royal Couples. If, as is commonly rumored in Berlin, Prince Augustus William of Prussia, the kaiser's fourth son, is to lead his cousin, Princess Alexandra of Schleswig-Holstein, Sonderburg-Glücksburg, to the altar in May next, they will say the Westminster Gazette, rank high among the most youthful of royal couples. For the bridegroom will be 22 and his bride 17.

The king of the Belgians and his bride were 18 and 17, respectively, when they stood before the altar in 1835, and their two daughters were wives before they had reached their eighteenth year.

The late empress of Austria, who was 24, and the ages of King Humbert and Queen Margherita were the same when they were made one in 1868.

At 23 the king of Greece married his 16-year-old queen; our own king and queen were 21 and 18, respectively, on their wedding day; Queen Victoria and Prince Albert were, both 20.

A straw vote taken among the Republicans of the Massachusetts legislature on their choice for the presidential nomination resulted as follows: Roosevelt 128, Crane 26, Taft 11, Root 7, Fairbanks, Hughes and Guild one each.
