

Three Great Kitchen Necessities

We contracted with the Fuller-Warner Co. of Milwaukee for the exclusive Portland Agency of their famous

Royal Stewart Steel Range

We have the first shipment in stock and we want to familiarize you with its good qualities.

Here Are a Few Points of Vantage

The Royal Stewart Range is economical in fuel. All of the outside plates are cold-rolled polished blue steel in natural finish (requiring no blacking). All parts exposed to heat are lined with heavy asbestos board and inner steel sheet, making a heavy triple wall and preventing radiation.

The flues are of ample capacity and are thoroughly lined with asbestos board. The back flue is of cast iron, the best material, as it is proof against jamming.

The oven is constructed of one sheet of heavy gauge cold-rolled steel. The oven top where exposed to the direct action of the fire is amply protected by a heavy cast plate, which also equalizes the heat in the oven.

The firebox of this range is one of its best features. In size it is properly proportioned for the work required. The coal linings are of the best heat-resisting mixture of gray iron which insures durability. The bottom grate is a distinctive improvement over other makes. It is reversible for wood burning. The wood firebox accommodates fuel 24 inches in length. The Royal Stewart Range has so many distinct features that it is difficult to enumerate them.

We absolutely guarantee this range to be a good baker, and we know that it is the best range on the market.

A Range, a Refrigerator and a McDougall Kitchen Cabinet

With these three household necessities a woman will find house work comparatively easy. To have the right kind of a range is absolutely necessary—it is the same with refrigerators and if you once use a McDougall Kitchen you will wonder how you ever kept house without it.

THE Great Glacier Refrigerator Facts

To many people all Refrigerators look alike. Such people, when buying a Refrigerator, look only at the size of the ice compartment. That's where they make a serious mistake. A Refrigerator that is nothing more than a place to keep ice is of course an extremely expensive piece of furniture to have in the house.

The duties of a good Refrigerator are to preserve food and keep things fresh and cool with the smallest quantity of ice possible. But scientific tests of Refrigerators have demonstrated the fact that no matter how much ice is used food cannot be kept free from contamination in a Refrigerator where the circulation and purification of air is limited.

The GREAT GLACIER REFRIGERATOR is built on scientific principles. It is so constructed that there is a constant circulation of dry air of uniform low temperature in the food-chambers, which continues in one direction, passing out after coming in contact with the foods, and condensing and purifying itself on the ice, thus preventing contamination.

It requires less ice than any other Refrigerator. This is owing to the scientific construction of the walls, which consists of eight sections—two of Wood, one of Mineral Wool, three of Sheathing, one of Zinc, and one space for the free circulation of air.

The Air Space in the walls of the Great Glacier is one of its important features. It is well known that air is the best distributor of heat when in motion, and also the greatest barrier to its transmission when it has no circulation. This dead Air Space prevents the conveying of heat to the inside of the Refrigerator, the space being as nearly airtight as possible, also prevents moisture from within reaching the outside case and swelling it out of shape.

Every Great Glacier Refrigerator is constructed with the greatest care, and there is no other Refrigerator made that can compare favorably with it, either as to food-preserving qualities or economical use of ice. It is a money saver because it is an ice saver. It is a Refrigerator that refrigerates with the least quantity of ice possible.

ECONOMY. Economy doesn't consist in buying a low-priced, poorly constructed Refrigerator, far from it. It consists in buying a Refrigerator that will last a lifetime and keep food pure and wholesome for a long time with the smallest consumption of ice. A poor Refrigerator will waste more ice and food in a single year than a good one will cost.

There are various sizes and styles of the Glacier Cold Dry Air Refrigerators. We call your special attention to the Edgewood Refrigerators Lined with real Porcelain on sheet steel. If you will buy one of these you will never have to buy another Refrigerator, because it will not corrode or rust out, and you can always keep it sweet and clean.

McDougall Kitchen Cabinets

The McDougall Cabinet is designed to lessen the work of the housewife and make life easier for her. They save thousands of needless steps—thousands of valuable hours. The housewife can stand at her kitchen table and reach everything she wants.

The housewife who has a McDougall Cabinet in her kitchen can rest assured that she has the most convenient, complete, compact kitchen cabinet in the world, and money could not buy a better cabinet.

Tops of McDougall Kitchen Cabinets

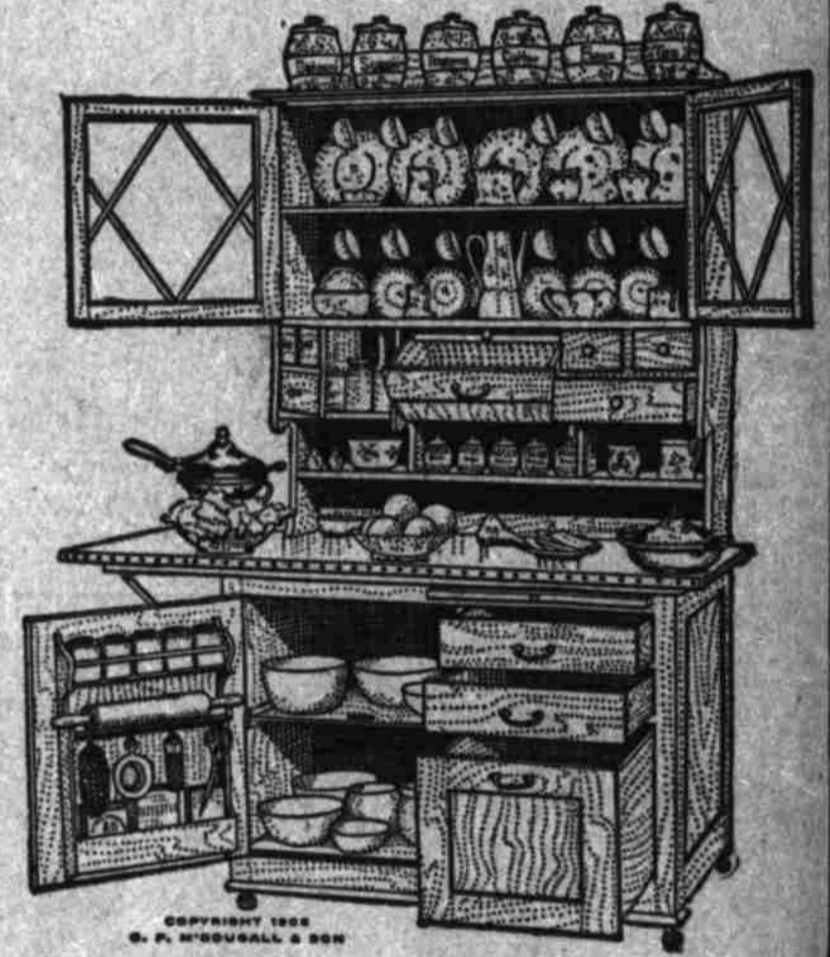

We call especial attention to the fact that the tops of McDougall Cabinets are not set down on the table top in such a way as to take up a large part of its working surface. Also note that in the McDougall you are not annoyed by doors or drawers opening out on the table. Every compartment can be opened without necessitating the removal of dishes or utensils from the table top, for fear of pushing them off the cabinet.

Note the handy cupboards, the convenient, accessible drawers, the McDougall Sifter Flour Bin, the roomy china closets with cup hooks and plate grooves, the McDougall Daily Reminder, the spice cans, package and bottle goods rack, recipe card rack, spacious shelves and the many other useful features that appeal to the busy, tired and overworked housewife.
