We have furnished hundreds of homes in Portland and can furnish yours. CREDIT IF YOU WANT IT.

Glacier Refrigerators With Every Late Improvement

Maybe you are skeptical, but real warm weather is liable to be here any morning now. Why put off your refrigerator wants until you are face to face with ruined provisions, just for the lack of a little foresight? No year has seen as fine a showing of refrigerators at Jennings' as the present season, and none which we have ever stocked have shown such perfect construction and sanitary safeguards as the GLACIER. We can't begin to tell you their many advantages. Best to come and look, and while you will be very favorably impressed with their many points of merit, you will also be glad to learn that prices are no more than those asked for the common kind of Refrigerators. No wood exposed in either ice or provision apartment. Perfect circulation of cold, dry air reaching every corner of the provision chambers. Ice chambers large enough to take care of provision compartments. Charcoal sheathing used, being dust, vermin and water-proof and a perfect non-conductor of heat. Ice racks strongest and cleanest in the world. Glacier Refrigerators are this country's best refrigerator; made in Grand Rapids, where the best in all household furniture is made. The Glacier is more than an ice compartment. It preserves food and keeps foods cool and fresh with the smallest amount of ice. The Great Glacier Refrigerator is built on scientific principles. It is so constructed that there is a constant circulation of dry air of uniform low temperature in the food chambers, which continues in one direction, passing out after coming in contact with the foods, and condensing and purifying itself on the ice, thus preventing contamination.

Cutler Desk Exhibit

These famous Desks are found in almost every first-class office in the country. To have a Cutler Desk in your office is something to be proud of. It embodies everything up-to-date. It represents the best value in a desk.

Cutler

No other dealer in the city handles the Cutler Desk. We are the exclusive Portland agents. Cutler Desks have many handy attachments that are important features. We invite you to step in and see the many different patterns. They are on the first floor.

The oldest and most prominent Stove and Range makers in the United States are the Fuller-Warner Co. of Milwaukee. They manufacture the celebrated

Stewart Steel Ranges

Known the world over. We are the exclusive Portland agents for these celebrated Ranges. In buying a Stewart Steel Range you assume no risk—the manufacturers guarantee each Range to be a perfect baker and a fuel saver—and you have our guarantee that we will refund you your money if a Stewart Steel Range is not satisfactory. There are several sizes and styles of Stewarts, and here is the description of three of them:

Royal Stewart Steel Range FOR COAL OR WOOD

Has four or six-hole tops; 14, 16, 18 or 20-inch ovens. All ovens are 27 inches deep and 13 inches high.

THE latest and best of all ranges. Every housewife will appreciate the many little conveniences embodied in this handsome range. The ease with which all dampers for controlling the fire are operated, and their simplicity makes it possible to adjust this range to any chimney without extra pipe dampers. BODY of range is of Wellsville Polished Steel. This is the very finest and most expensive body material. It has a beautiful bluish color and a highly polished surface, requires no blacking and is not affected by heat. OVEN is square, of extra height and depth; made of the best cold rolled steel of extra thickness and will not warp or leak ashes owing to the method of construction. The heat circulates completely around the oven, giving an even temperature to all parts. This makes the oven rack or shelf as serviceable as the oven bottom. FIREBOX is extra wide, with a new kind of duplex grate, simple in construction, which does not get out of order or clog with coal; linings of best gray iron, sectional and very heavy and durable; smooth linings for hard coal or wood; knob linings for soft coal. Grate can be drawn out through front without disturbing linings. All parts of fire reached by poker through front cleaning attachment. Wood firebox is 24 inches long. RESERVOIR is of heavy lined sheet copper (the best material) enclosed in a nickel and steel covering, and has extra capacity. The high closet is especially fine. THERMOMETERS can be fitted if wanted. The Range is a combination of the best features to be found in others and is also the handsomest article of kitchen furniture that can be found. We ask you to examine the Royal Stewart before buying. OTHER FEATURES—Spring-balanced oven door; large pouch feed; patent poking and lighting device; damper parts outside of range, away from fire; large ash pan; clean out door in front with lip to fit over ash pan; heavily braced steel base and beautiful nickel work.

Magnet Steel Range FOR COAL OR WOOD

Four and Six-Hole Tops; 14, 16 and 18-inch Ovens. All ovens are 18 1/2 inches deep and 13 inches high.

THIS RANGE combines more good features which add not only to the convenience but to the durability and general satisfaction, than can be found in any other range selling at the same price. Economical in operation, perfect working, materials the best and of the latest design, we recommend it as the best value in a moderate priced range. BODY of range and closet of Wellsville polished range steel in natural finish, which requires no blacking. FLUES are lined with asbestos board to retain heat. OVEN construction is our specialty. Steel ovens, made on the one seam principle, are absolutely tight and rigid and will remain so. The flue arrangement is such that it heats the oven evenly, so that the shelf is as valuable as the oven bottom for baking. FIREBOX is of the latest model, arranged to produce perfect combustion, which means fuel economy. Linings are of gray iron, sectional and extra thick where weight is required. By lifting out end linings and reversing grate, a wood firebox 22 inches long is secured. All parts of firebox can be reached by poker through our patent cleaning attachment. RESERVOIR is the standard pattern, with cast iron, porcelain lined water tank set in an outer gas-tight cast box. The heat is controlled by a double damper and can be shut off at will. It is a quick and powerful water heater. No trouble from water dripping and soiling floor; our non-drip reservoir bottom prevents that. OTHER FEATURES—Large top surface, with extension shelf on square pattern; large pouch feed door; wide swing wood door; double system of check and draft dampers and large ash pan. THERMOMETERS fitted if wanted.

Regent Stewart Steel Range FOR COAL OR WOOD

Has Four or Six-Hole Tops. Ovens 14, 16, 18 or 20 inches wide. All Ovens are 20 inches deep and 13 inches high.

A HANDSOME, thoroughly reliable and "up-to-date" range. Has LARGE OVEN AND GOOD FIREBOX which distinguish Stewart Ranges from all others. A most compact range, simple but attractive in design and guaranteed perfect in fitting and operation. It has numerous little conveniences not found on any but the highest grades. THE BODY of range and high closet is of the best Wellsville polished steel, the only perfect material for this purpose, as it requires no blacking and is not affected by heat. THE FLUES are lined with heavy asbestos board, which prevents loss of heat and means economy in fuel. THE OVEN is its best feature and has received particular attention. It is made of the best cold rolled steel of extra thickness. The oven is entirely surrounded by the flues, so that all parts are heated uniformly. This makes the oven shelf as serviceable as the oven bottom for baking. THE FIREBOX is next in importance to the oven and has also received special attention. Linings are of cast iron, sectional and very heavy. The grate is duplex reversible for wood burning and of an improved construction, very simple and cannot clog or get out of order. All parts of firebox can be reached by poker through the front cleaning door, an improvement over other makes. RESERVOIR is of cast iron, porcelain enameled. It has a large capacity and heating is controlled by large double damper. Water can be boiled in a few minutes. No trouble from condensation dripping on the floor; our non-drip reservoir bottom overcomes that. A complete double system of check and draft dampers give perfect control of the fire at all times. All cast parts of high closet are nickel plated and all nickel surfaces are highly polished, making a beautiful finish and one which will not become dull or tarnish. OTHER FEATURES—Large, smooth top surface; web-pattern non-breakable covers; one sectional ring cover; oven door spring on outside, easy of adjustment; heavy steel ash pan; large clean-out opening in front for convenience; handsome steel floor base; oven damper has working parts on outside, away from fire. THERMOMETERS fitted if desired.
