TODAY'S MARKETS

Strawberry Market Goes to Pieces With Enormous Receipts - Time for Canning Fruit Is Now Close at Hand.

STRAWBERRIES GO TO PIECES

Market Slumps With Engrmous Arrivals From All Sections at Once.

Today's market features: Prune business is heavy. Strawberries go to pieces. berry plums appear in market. Canners to open tomorrow.
Wilcon deales sale of mills.
Support market is a cent lower.
Cantaloupes are cheaper again.
Peaches are in better condition.

The strewberry market has gone to the bot-tom and during the past 24 hours sales of stock have been made at record-breaking figures. O've prominent commission house cleaned up a

have been made at record-breaking figures. Cra prominent commission house cleaned up a large lot last evening at 80c a crate for 24a and sales at \$1 have been frequent since that time. For best berries there is much difference of opinion fibrong the trade. Some sales made as low as \$1.25, while others range up to \$1.75 a crate. The general price this morning ruled between \$1 and \$1.50. Receiptagre extremely heavy; all sections beginning to ship at once. Most of the stock arrived in once good shape, but only a few were strictly finer. In yesterday's report an error was made. It was stated that sales were made from \$2.50 to \$2, with most of the sales between the two figures.

The trade in general is of the calmon that

The trade in general is of the epinion that the glut in berries will not last long; the con-ditions being very similar to those of a year ago when a low market resulted for but two days. After that herries became rather scarce

days. After that herries became rather scarce and prices advanced materially.

The glut of stocks is likewise expected to be improved quite materially by the opening of the canneries. One of the local institutions opened yesterday and the other will open tomorrow morning. The canneries are offering to a pound for berries in bulk, thus saving growers the cost of boxes and packing.

Prune Business Is Heavy. There is great activity in the prune market; both for spot stock and for futures. Cali-fornia trade is increasing very fast and many growers are said to be making contracts there at sharply advanced figures.

Cherries are arriving in larger quantities and prices are fractionally lower for the ordinary

run. Quality not good yet. nn. Quality not good yet.

Brawley cantaloupes are lower with the larger supplies. Demand, however, is very good on account of the excellence of the fruit.

Cochellas atill reported in bad shape with a prominent dealer reporting their rejection by the retail trade. Brawley's range between \$1.50 and \$2.60 per center. \$1.50 and \$2.00 per crate. Levy & Spiegel report the first arrival of California cherry plums this season. Stocks in excellent shape at \$1 a box.

Peaches are arriving in better condition with prices fractionally lower. Weather Hurts Hops in East.

Weather Hurts Rops in East.
Unfavorable weather in the east may possibly do for the hop growers more than all the combines have ever accomplished. Conditions there are rather cold and the yards are so backward that damage is said to be resulting. The yards in this state are rather mixed as to condition. The cultivated yards are looking well, while the neglected ones are suffering from draught. Of the situation the latest issue of the New York Producers' Price Current says: rent snys:

"We will have a sort of waiting market;
there are scarcely enough transactions from
day to day to determine values. Holders are

asking about late prices and are not hurrying matters, preferring to await the development of the crop reports. Such sales as transpire are about in line with the quotations previously given, but the top figures, especially for state hops, are full high at the moment. fittle interest was attached to the auction A little interest was attached to the anction sales of some damaged California hops. One lot of 31 bales, crop of 1906, went at 5½c, and 50 bales of old at 4@4%c. General crop news is unchanged. Advices from the Pacific coast indicate satisfactory progress, but the continued cold weather here in the east has further extended the growth of the vines, and const indicate satisfactory progress, but the continued cold weather here in the east has further retarded the growth of the vines, and unless there is a change to more genial weather there is likely to be some damage. United States revenue returns for April show the beer production to have been 4,616,641 bbls., against 4,300,494 bbls. same month last year, a gain of 223,692 bbls."

Lima beans show another advance of 14c a pound, owing to unfavorable crop conditions the south. Eggs are holding their own with receipts No additional creameries have advanced their

price to Zic today. Situation steady. Chicken market is easy, but not weak, Prices Dressed mests beginning to arrive in bad condition on account of unfavorable weather. Prices same for best quality. Chittim bark is arriving in small lots with demand quie dull.

WHAT DEALERS SAY

By Sherk & Graham Co.
A slightly better tone prevails in the egg market, although the price remains practically the same. Buyers want nothing but candled eggs, not caring to take chances at this time of the year on account of so much inferior stock.

bressed meats continue in good demand, especially for fancy stuff, but many shipments are being received in bad condition owing to the warm weather. Shippers should use extreme caution in shipping dressed meats this time of year and get them to their destination with the least possible delay.

Pquitry is moving somewhat better with no change in the price.

arile, Sc per lb.

Wabash, common Western Union Telegraph..... CANNERIES START WORK

Salem Concern Begins on Strawberries-Crop to Be Light.

ries—Crop to Be Light.

Salem, Or., June 5.—The Salem Mutual Canning company began operations yesterday for the canning season under favorable auspices and with prospects for a good season. It is, however, believed that the strawberry season will be much shorter than usual and the crop light on account of the dry weather. The plants are thirsting for moisture and the fruit is not maturing to the size it would attain were there occasional showers to water the plants and give them the necessary moisture. It is also feared that the anticipated immense crop-of cherries may be diminished by the dry spell and although a rain at this time might prove disastrous to the advanced varieties of cherries yet the later varieties would be improved thereby materially. Blackberries and logans are plentiful. The cannery is paying \$8.75 per hundred pounds for strawberries. NEW YORK COTTON MARKET.

Liverpool Cotton Lower. Liverpool, June 5.—Cotton quiet, 7 to 9 points lower.

CATS KILLING GAME Partridges and Even Deer Destroyed by Them in Canadian Forests.

Quebec.—Cats are doing great damage in the Canadian woods and the complaints on the subject which reached here some time ago from the forests of Maine are now being repeated from every part of the Canadian forests adjacent to the bordering states.

Partridges are being completely destroyed by these savage beasts in some parts of the country, the cats pouncing upon them on the snow in winter and also devouring them while the birds are sitting on their nests in the spring.

Not only do they destroy birds of all kinds, but they are actually killing deer, especially in the forests of New Brunswick and Quebec. The cats grow to an enormous size and are familiarly known here as the Canada lynx.

cently. The wedding party proceeded to and from Bray church by electric and steam launches gaily decked in green and white.

The bride's launch—an electric boat—was lavishly decorated with cherry blossom, lilies and spirea, and when occupied by the bride, wearing a lace dress of honiton applique trimmed with silver embroidery, and the bridesmaids, in pale mauve colienne, and bouquets of pink roses, presented a very picturesque sight. Five other launches followed. The wedding party started by water from West Court, in Bray Reach, and disembarked and reembarked at the vicarage lawn. The contracting parties were Miss Mary Gosset Mayall and Lionel Forbes Bridges. The church was crowded and hundreds of people watched the bridal procession pass up and down the river.

Murders for Revenge in Corsica. From the Wide World Magazine.
Fortunately the dark days when
Corsica resembled a huge battlefield
survive only as a terrible memory of the survive only as a terrible memory of the past.

Today we can hardly credit the fact that between the years 1539 and 1729, 309,090 people were murdered out of revenge, and that during 31 years of last century—from 1821 to 1852—the number of murders was estimated at 4,300.

Filling.

This fingle you read today
Is lacking in sense and graceBut ain't it the dandy way
To fill up an inch of space?

Luther Burbank and His Book. The large work that Luther Burbank has done with plants is not all of his work. As he cares for his plant children, watches their development, sees them respond to his treatment and produce the results for which he has labored, he must of necessity ponder the many questions which such experiments suggest, and it is not strange that he should, in looking at the larger side of such experimental science, apply the truths of which he is the able exponent to human life.

A book has just been issued which contains the results of his reflections and his theories as applied to the life of human beings. The Training of the Human Plant is the suggestive title of Mr. Burbank's book. Humans Like Plants.

"During the course of mahy years of investigation into the plant life of the world." he begins, "creating new forms, modifying old ones, adapting others to new conditions, and blending still others. I have constantly been impressed with the similarity between the organization and development of plant and human life."

In the crossing of species and in selection wisely directed he has come to find a great and powerful instrument for the transformation of the vegetable kingdom along lines that lead constantly upward. The crossing of species he holds to be paramount. In organized and intelligent effort, rigidly selecting the best and excluding the poorest, rests the hope of all progress. "The mere crossing of species, unaccompanied by selection, wise supervision, intelligent care and the utmost patience, is not likely to result in marked good and may result in vast harm. Unorganized effort is often most victous in its tendencies."

He lays emphasis on the opportunity now presented in the United States for aiding in what he thinks is the grandest opportunity ever presented of developing the finest race the world has ever known out of the vast mingling of races brought here by immigration.

Crossing of Types.

"We are more crossed than any other "During the course of many years

ever known out of the vast mingling of races brought here by immigration.

Crossing of Types.

"We are more crossed than any other nation in the history of the world and the same results are visible in us as in a much erossed race of plants; all the worst as well as all the best qualities of each are brought out in their fullest intensities."

"All that has been done for plants and flowers by crossing," he declares, "nature has already accomplished for the American people. By the crossing of types strength has in one instance been secured; in another, intellectuality; in still another, moral force.

"Where shall we begin? Just where we begin with plants" Mr. Burbank answers, at the very beginning. "It has been said that the way to reform a man is to begin with his grandfather. But this is only a half truth; begin with his grandfather, but begin with the grandfather when he is a child."

Don't clap-him into school too early, however. Overeducation is the curse of modern child life in America. It is time enough, Mr. Burbank says, to thisk of school at ten years of age. Prior to that period he would have the child reared in the open, in close touch with nature. Sunshine, good air and nourishing food are as essential in breeding children as in breeding plants.

Belection.

"There is not a single desirable at-

"There is not a single desirable attribute which, lacking in a plant, may not be bred in it. Choose what improvement you wish in a flower a fruit or a tree, and by crossing, selection, cultivation and persistence you can fix this desirable trait irrevocably. Pick out any trait you want in a child, granted that he is, a normal child, be it honesty, fairness, purity, lovableness, industry, thrift, what not. By surrounding this child with sunshine from the sky and your own heart, by giving the closest communion with nature, by feeding this child well balanced, nutritious food, by giving it all that is implied in healthful environmental influences, and by doing all in love, you can thus cultivate in the child and fix there for all its life all of these traits. Belection.

Tendencies to Beversion. "Naturally not always to the full in all cases at the beginning of the work, for heredity will make itself felt first and—as in the plant under improve-ment, there will be certain strong ten-

Dy Them in Canadian Forests.

as get little known fruit of the cactus which may prove the greatest of his gifts to mankind. Luther Burbank has made a name (which concerns him little) and has performed a service to mankind (which is his intent) that deserves grateful appreciation.

Not a "wizard," but a worker, he has unostentatiously kept his way untrammelled by many of the conventions which fetter mankind. He has dared to live his life in his own way and to do the things that he wanted to do. Besides his achievements the accomplishment of the multiplier of the blades of grass has small place. Fishhawk Gave Up Prey. Fishhawk Gave Up Frey.

From the St. Augustine Record.
Aleck Canova brought a three-pound trout to the Record office recently and gave a very interesting description of the manner in which it was caught.

His son, Frank, observed a big fish-hawk swoop down on the fish near Barcreek, about a mile and a half north of town, and noted that the fish was of very respectable size. He watched the big bird until it hovered almost overhead but within close range, and he picked up a stone and with splendid accuracy hurled the missile at the hawk.
