

For 20 Years a Leader in Dental Work in Portland

Plates Made and Fitted

This is a long time, and shows conclusively that I have always kept my word and given my patients the best treatment that it was possible for them to secure here or elsewhere.

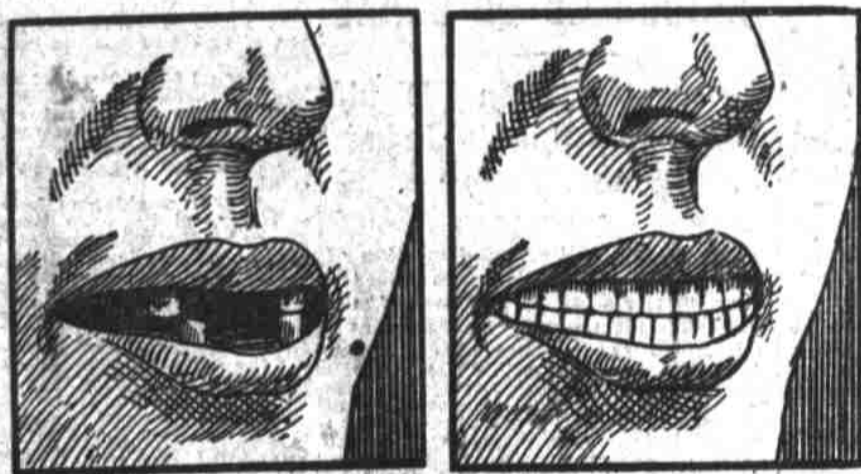

Where two firm teeth remain a plate won't be necessary, then

We Attach A Bridge

which works perfectly and chews your food almost as well as the natural teeth. A well-made bridge is one of the greatest blessings it is possible for a skilled dentist to provide his patient. A well-placed bridge lasts a lifetime and never causes annoyance of any kind.

Drop in and let me tell you what is needed. You can have the work done to suit your convenience and pocketbook. Our terms are the most reasonable in Portland, considering the high-grade work always supplied.

Teeth Without Plates

According to this system all missing teeth are supplied with or without plates. This advanced bridgework is the greatest triumph of modern dentistry. The above illustration shows an ordinary case, such as is handled every day in this office. A couple of firm teeth is all that is needed. They will chew your food perfectly, cause no discomfort whatever and improve your appearance beyond description. We only advise plates when you are toothless. This is the home of advanced dentistry. No charge for examinations.

OUT OF TOWN PEOPLE

Should remember that our force is so organized that WE CAN DO THEIR ENTIRE CROWN, BRIDGE AND PLATE WORK IN A DAY if necessary. POSITIVELY PAINLESS EXTRACTING FREE when plates or bridges are ordered. WE REMOVE THE MOST SENSITIVE TEETH AND ROOTS WITHOUT THE LEAST PAIN. NO STUDENTS; no uncertainty—but SPECIALISTS who do the most scientific and careful work.

I give my personal attention to this branch of the work and can guarantee the best possible results. There is a great difference in plates, and unless they fit perfectly are a constant source of annoyance. If you need a plate we will extract useless teeth or decayed stumps without causing you the slightest pain and supply a plate or bridge on the same day, if necessary. Remember you cannot be too particular about your plate; the best is a comfort and the other kind almost worse than nothing.

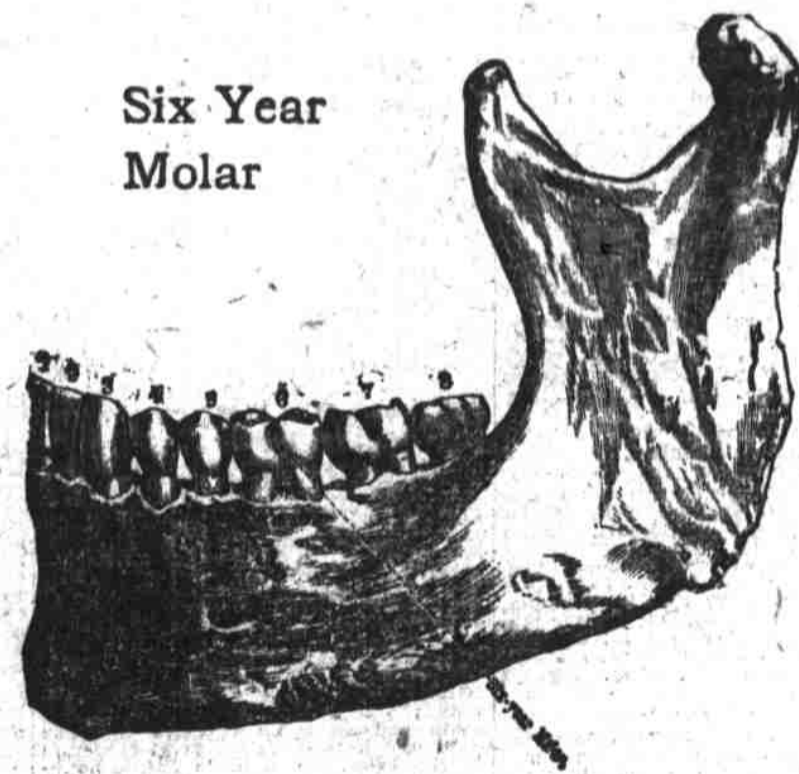

Dangerous Dentistry

Is that done by inexperienced dentists whose first aim is to extract your teeth, as it takes less time and in the long run pays better.

Reliable Painless Dentists

Our reputation for reliability and thoroughness is well established. Cleanliness, Good Work and Quick Service.

Six Year Molar

The dotted line in the cut above points to the first or six-year molar, and is one of the things that parents of young children are the least informed about in dentistry. Almost every mother who goes to the dentist with her child in trouble with toothache contends that it is only first or baby tooth. This is a sad mistake, and should be looked after and filled before the tooth has gone beyond repair. This is one of the most important teeth in the mouth, as the regularity of the permanent teeth depends upon its maintenance. It usually comes when the child is 6 years old, hence its name, and should by all means be saved and not extracted, for the good of the child in after years.
