

WIRELESS TELEPHONE ADDRESS BEFORE USE

Governor Chamberlain Forced to Decline a Number of Urgent Invitations to Address Voters in Various Multnomah Towns.

Governor George E. Chamberlain will make but one address in Multnomah county this year. This will be given at the Empire theatre, Twelfth and Morrison streets, next Thursday evening at 8 o'clock.

Insistent demands from every section of western Oregon to have the governor speak to the voters make it impossible to carry out the original plan of having the governor spin through Multnomah county in an auto the last of next week, speaking at many of the smaller places.

Until a few days ago the governor's itinerary called for addresses at Astoria, Gresham and other points in Multnomah county. Then came demands that he speak in half a dozen other towns and villages. The late telegrams and letters to his headquarters asked that he duplicate part of his western Oregon trip in order to reach to voters who had missed his first address.

TALK THROUGH AIR OVER SEA SEES INVASION OF COAST BY JAPS

By Wireless Telephone You Could Speak From Portland to Pacific.

M. Joseph Stern of New York City, who is interested in wireless telephony, is registered at the Portland hotel. Mr. Stern was in San Francisco when the fleet was there, and was connected with the installation on many of the war vessels of special apparatus in connection with the wireless telegraph instruments so that they could be used as telephones between the ships and the shore.

"The wireless telephone," said Mr. Stern last night, "although not so well known to the public as the wireless telegraph, is now a practical success. Our wireless telephones are on the ships of the fleet and work so well that the ships talk to one another through the air just as readily as if the two men talking were in separate office buildings on land. So far the range has been about 25 miles for sure results, although in a few cases men have talked to each other through the air fully 50 miles apart.

"Some operators think they have caught the sound of the human voice 100 miles away, but this is not certain, so I prefer to claim nothing that cannot be done at any time. It is only a question of time, and a very short time at that, when we can talk through the air just as far, or perhaps even farther, than we can by means of wires. Recently one of our men in France from the top of the Eiffel tower was in communication with every station on the continent. The wireless telegraph can send 'clocks' several thousand miles it is only a question of power and delicate instruments to send the waves of the human voice the same distance.

"The wireless telephone has several advantages over the ordinary land telephone. In New York harbor, for instance, where the distances in all cases are not over 25 miles, the wireless telephone saves the wages of an operator on board. The captain is his own operator with the telephone the same as on land. Any one can use it with small boats, like tugs or ferries.

"Another peculiar thing is that the wireless telephone can be used in the most remote places. For instance a man here in Portland can telephone over long distances to Astoria and then by special connections 30 to 50 miles out to sea. This is not done by means of an operator repeating the message, but the man here in Portland can actually hear the voice of a man on the ship out of sight of land off the Columbia bar.

"The wireless telephone has other advantages over the wire connected instruments. There is no such thing as the burning that one often hears of when the wires are cut. In the wireless, wire telephoning is far more expensive than wire telegraphing, as everybody knows because the telephone wire can carry only one message at a time, but with the wireless the expense is far less. A man in a remote section, where the wire cannot be strung, can be reached by a telephone because of an occasional message from one man. But the wireless costs no more in such a place than in a thickly settled place.

"Not right away, of course, but more than in the steam engine, but all three must give way in time to something better."

CARE FOR INTERESTS OF SEALY, MASON & CO.

Francis and John Sealy, surviving partners in the firm of Sealy, Mason & Co., have applied to the county court for approval of the partnership agreement of the firm. The individual estate is in charge of the widow, Mrs. Florence Alice Mason. The partnership property has been appraised at \$44,181, the Sealy and Mason each owning one-third.

NOTABLE INVENTION.

Automatic Electric Incubator Originated by a Portland Man.

Invention that has attracted widespread attention not only throughout this section, but in other states, is the automatic electric incubator. It is the invention of a Portland man who is a wizard of considerable local note. This promise to be his most successful patent. The invention is absolutely automatic, and is not "affected" by outside atmospheric conditions. It will automatically control the temperature inside the egg chamber to a certain degree, never allowing the heat to drop below the normal temperature of the incubator. It needs no expensive incubator house to keep the cold wind away in the case of spring. The inventor takes care of itself.

Men who have had a great deal of experience in incubator work have been to the shop where the inventor keeps his wonder in the mechanical world at 146 Fourth street, between Market and Mill, and looked it over carefully. They pronounce it a great improvement over old means of maintaining an even temperature in incubators and other apparatus. The inventor, like most men of genius, is evidently in need of means to give his invention the widest publicity. He will find from among the many visitors who daily call at his place some one who will allow him the use of his name as the inventor of notable discoveries.

"We should all try to forgive and forget, but the trouble is so few of us want to be forgotten."

THE HELIG CROWDED WITH FRIENDS OF DENTAL COLLEGE GRADUATES THURSDAY.

Thirty-nine young men hailing from many states, east and west, who have been spending the past three years in Portland for the purpose of pursuing their studies in dentistry, received the degree of doctor of dental medicine Thursday night at the annual commencement exercises of the North Pacific college of dentistry. The Helig theatre was crowded to its capacity with a large audience of friends of the graduates.

Dr. Herbert C. Miller, dean of the college, made a few appropriate remarks and Dr. Joseph A. Pettit, professor of anatomy, conferred the degree of doctor of dental medicine.

In the annual address Judge M. C. George called attention to the extraordinary progress that dentistry has made in the past 20 years, and the high place it now holds among the learned professions, the vital relations which exist between this branch of surgery and the good health and well-being of humanity.

Dr. Robert C. Coffey, professor of surgery, delivered the charge to the class.

The North Pacific College of Dentistry has grown so rapidly during the past few years that Portland has now become the greatest dental educational center west of Chicago. A school of pharmacy has just been added which will commence its regular session next October as its several courses have modeled after those of the oldest and best colleges in the country.

The names of those men who received the degree of doctor of dental medicine were as follows: George Edward Burton, Van Robert Bilyou, Charles Edward Burrow, Donald Campbell, Fred Edward Casey, Arthur L. Cornell, Elmer Elbert Cummins, Harvey Lincoln Cummins, Charles William Edgerton, Rufus Sidney Eshelman, Wilbur Willard Faulkner, Walden Irving Ferrier, Alfred Evan George, Lawrence Herbert George, Oscar Goodrich, Huber Vincent Gulbranson, Charles Augustus Haentze, Henry Willard Hatfield, Frank Landrine Ingram, Cobby Smith Jones, Marshall Young Lucas, Arthur Truscott MacMillan, Lorne Gilmore McAloney, John Robert Marshall, Martin Louis Millard, James Riley Morgan, Stanley Casper Peters, Maurice Francis Power, Benton Percy Rand, Thomas James Sederholm, James Vinson Scott, Thomas Benjamin Short, David Vaughan, Otto Floyd Vinson, Frank Albert Vorse, Lee Arrington Wells, Oliver Howard Whaley, Arthur Hall Williams, Paul Christian Yates.

The firm has been thinking for some time of starting a branch in China or Japan to get a foothold in Asia among the very first, he said, he would like to see the firm in the East. "But the possibility of a row over there is making us a bit careful. It is all well enough to say that nothing is doing and all that just so you don't put up any money, but when it comes to a question of putting up some thousands of dollars and then run the risk of having it all lost by a war, it is quite a different matter."

"I am going from here to San Francisco, then to the east. If things do not shape themselves differently than they are now I shall strongly recommend the establishing of our branches in New Zealand and Australia under the English flag instead of China or Japan. Of course in Hongkong we would be under English protection, at least for the time being, but a war over there would no doubt result in even England losing the island of Hongkong, and that would be a serious matter. Of course the white man would win out in the end, but then there would our business be in the meanwhile."

"It were not for the fleet on this coast, Japan could take and hold the whole Pacific coast from Nome to Madagascary. As it is, we would have a warm time of it. Our big guns at the mouths of our harbors can capture without the firing of a shot. There is nothing to prevent Japan from landing men anywhere along the coast 10 or 15 miles from the mouth of this river. Fifteen to 25,000 men with three days' rations in their knapsacks could easily capture San Francisco. And the same with Puget Sound."

TWO LECTURES UPON CHRISTIAN SCIENCE

First and Second Churches of Christ, Scientist, Will Hold Joint Services.

The First and Second Churches of Christ, Scientist, of this city, jointly, have heretofore given but one lecture semi-annually. The two lectures to be given this afternoon and evening at 3 and 8 o'clock, respectively, at the Helig theatre, are the result of the growth in the number of inquirers about what Christian Science has to offer and because at the last several lectures a number of people were unable to gain admittance.

The lecturer, Frank H. Leonard of Brooklyn New York, is an accredited member of the Christian Science board of lecturership of the First Church of Christ, Scientist, of Boston, Massachusetts. It is said that he can testify to the healing-power of Christian Science, having been restored to health after all other remedial means had failed to cure him.

These lectures are for the purpose of correcting wrong impressions of Christian Science that may have been gained by the individual, and also to explain in a brief way what Christian Science is. The public is cordially invited. Admission is free. There will be no reserved seats.

NEW CRIPPLE CREEK ON THE WASHOUGAL

Developed Vein Shows Remarkable Ore Bodies Within Three-Five Miles of Portland.

For 30 years after Cripple Creek, Colorado, was discovered nobody paid any attention to the Washougal valley in the country so rough that only within the past year has it been prospected. A few years ago E. A. Mabey, now president of the Washougal Gold and Silver Mining company, took a pack on his back and ventured into what was then about the most inaccessible and least known part of the state of Washington. At the head of the Washougal he found what in time may become one of the greatest mines in America.

A company was formed with \$1,000,000 capital, 1,400 acres of ground were secured and developed. Today there are two tunnels on the property through solid granite, one 300 feet long, that cuts a vein at a depth of 400 feet, and the second tunnel, of 650 feet, that cuts the vein at a depth of 600 feet. On the surface the vein extends for over one and one-half miles and varies in width from 3 to 30 feet. On the 400 foot level the width of the vein is from four to six feet. On the lower level drifts are 1,000 feet, and the vein holds its width and values throughout. If the whole ledge developed as has the part that has been mined will prove to be one of the largest and most valuable ore bodies in America. The assays taken from the vein in almost any part of the mine average better than \$90 a ton. An average assay made the past week of ore taken at random here and there in the lower drift and in 34 ways selected, \$35.00 lead, \$2.58 copper, \$0.85; total value \$92.03.

Forty men are kept at work on the mine, but they pay run of over \$5,000 per month. So far over \$200,000 in cash has been expended in developing the property. A smelter is being put up, a water power plant and an electric plant are being installed and everything is being done to operate on the most modern and least expensive basis. The machinery is on the ground or on the road going in from the river at Cape Horn. Sixteen miles of road has been built from Cape Horn to the mine.

The property and the company is under the personal direction of the chief owner, E. A. Mabey, who kept mining judgment and bulldog courage has literally wrung a wonderful treasure from the hand of Nature.

\$1 a Week Under Our Easy Payment Plan

Your Carnival Outfit We Dress Men or Women

Beautiful Wash Suits \$9.00 Up

MORTGAGE GIVEN TO FINISH ROAD

Construction of the Spokane, Portland & Seattle Road Provided For.

According to prearranged plans for construction of the Spokane, Portland & Seattle railroad, the corporation has filed a mortgage to secure a bond issue of \$100,000,000 to cover the cost of the entire system now built and contemplated. The Central Trust company of New York is named as trustee for the bondholders.

The mortgage is to secure bonds issued to the men who are furnishing the money to build the north bank road, the two extensions can be carried on the Willamette river and for extensions, all estimated at 417 miles. The road now built, including bridges and equipment, has cost about \$40,000,000. It is said to have been the most expensive line ever built in the west.

The mileage from Pasco to Fasco, now completed, is about 225 miles. The line from Spokane, now being rapidly built, makes the north bank road aggregate 417 miles. The usual form of railroad mortgages is to provide for a larger sum than at first required, so that extensions can be carried out without the necessity of making additional mortgages.

It is alleged by the company's officials that the road is not likely to project extensions into Oregon at once, but there is a well founded belief that the Hill companies will push into more than one section of Oregon now without railroad transportation and long in need of this necessary stimulus to development.

CLOSING OUT SALE.

Of Bathing Suits, Caps, Shoes, Etc., for Men and Women.

During the great closing out sale we offer our entire stock of men's women's and children's bathing suits, caps, hose, etc., at regular wholesale prices. If you are planning a trip to the beach now's your time to save money. McAllen & McDonnell, Third and Morrison.

GRADUATION DAYS AT CASTLEROCK

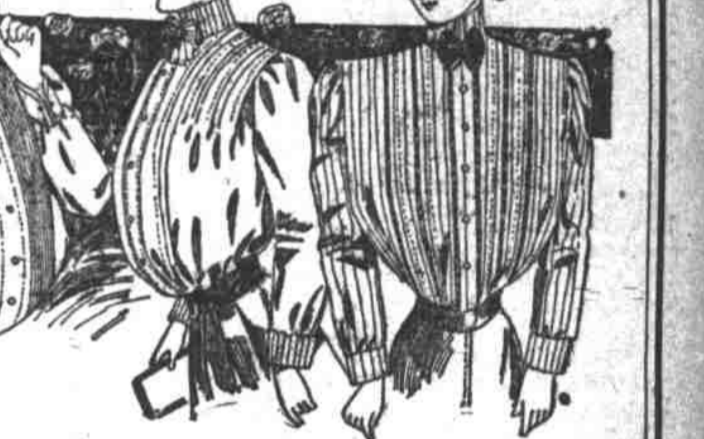

Castlerock, Wash., May 23.—The closing exercises of Castlerock high school were held at the opera house last night. There were nine graduates, six young ladies and three young men. Miss Clara Minnie Birkenstock was valedictorian and Miss Bessie Leon Huntington class poet. The diplomas were presented by Rev. Fred W. Jackson of Kelso. The graduates of the grammar school gave their program in the opera house Thursday evening. While several numbers on the program received special praise, the valedictory, by Miss Bessie O'Neill, was considered unusually good. Miss O'Neill is only 13 years of age and is the youngest member of her class, but both the message, entirely her own composition, and its manner of delivery were worthy of one much her senior.

Impondero-Therapy

Will quickly, permanently and absolutely cure every curable disease. If you are interested we will be pleased to have you call and examine the proofs.

RHEUMATISM—Impondero-Therapy relieves the pain at once, drives away the inflamed and sore conditions of muscles and nerves, reduces the swellings, revitalizes the diseased parts and compels normal and healthy conditions. This means a permanent cure.

STOMACH DISORDERS and KIDNEY and NERVOUS DISEASES—These distressing and very general ailments, which so frequently result in devastating disease and death, are speedily annihilated by Impondero-Therapy, and the grateful testimony of our patients who have been cured through this treatment shuts out all doubt and cavil as to the effectiveness of Impondero-Therapy. Practically the whole field of medicine had previously been exhausted by our now enthusiastic patrons when their several cases were submitted to us.

EYE, EAR, NOSE and THROAT—The very wide range of diseases affecting these organs, and the expensive and almost worthless attempts made heretofore to obtain relief, have given us a clientele of very warm advocates of Impondero-Therapy, and their speaking testimony is available to all skeptics. We will be glad to be permitted to "show you."

Why We Advertise

Intelligent people read the daily papers with a discrimination that enables them to properly estimate the value of a printed statement. By this means they discover and know what they want. We have our special field of usefulness and we want the public to know that we are here, and for what purpose. We are bringing joy and sunshine into the hearts and homes of many who have heretofore been despondent through ill health. We have no difficulty in getting business and friends from Portland people when we "show" them the remarkable evidence of cures made by Impondero-Therapy. That's the why. We are here to stay. We want your patronage, and if you will but allow your will to influence you we shall add your name to the long list of our gratified patrons and friends.

CHINESE GAMSTERS CAUGHT LIKE RATS

The police last night raided a Chinese gambling den in the rear of the Chinese tobacco store at 87 Second street. The place has been under surveillance for about a week. In the haul the detectives secured a dozen Celestials, a wagonload of doors leading to myriad secret exits and passages, and \$21 in money.

The gamblers were bagged like rats in a trap. With secret passages leading from the den into three adjoining buildings they were dumfounded when, becoming alarmed, they discovered that
