

# BOW ORDER MYSTERIOUS

### San Francisco Police Expect to Make Arrests for Killing of 14-Year-Old John Buchinoff, Who Was Struck Blow on Head.

(United Press Leased Wire.)  
San Francisco, July 11.—Arrests are expected today in the mysterious case of the murder of John Buchinoff, 14 years old, who was killed by a blow on the head yesterday afternoon and thrown into a bin of garbage at the sanitary reduction where his slayer evidently believed it would be incinerated and all trace of the crime destroyed.

Every driver who took a load of garbage to the incinerator yesterday is under surveillance today and they are being closely examined. The detectives also are making a close investigation of the record of Fred Buchinoff, father of the murdered boy, who suddenly appeared at the reduction works last night when the body was found and explained that he had been searching for the missing lad. The Buchinoff home is nine blocks from the reduction plant, and the detectives can't get a satisfactory explanation from the man how he happened to be searching in the garbage.

The mother of the dead boy called at the morgue today and opening the eyes gazed for a moment at them. She is a Russian of the peasant type, and the detectives learned from her that she believes the picture of a murderer is always preserved in the eyes of the victim. The father accompanied her and they chanted in Russian all the time they were in the morgue. The mother felt the body of the boy from head to foot, passing her hands over it in a manner which aroused the curiosity of the officials, but they were unable to understand what she said. The detectives could see no photograph in the dead boy's eyes.

The body was found last evening when the workmen at the reduction works were preparing to empty the bin into the incinerator. A hand protruding from the garbage attracted the attention of the men and the stiffened body of the boy soon was revealed. It had scarcely been laid out on a plank when the aged father forced his way through the crowd and flung himself upon the prostrate form, chanting in weird tones a Russian psalm. The men had difficulty in disengaging the body from his embrace.

The discovery at the morgue that the boy evidently had been struck by a blow on the head, fracturing the skull, led to investigation of the police on the murder theory.

The coroner's inquest developed that the Buchinoff boy had died from suffocation. It is thought probable that the boy was held over the bin and suffocated before he was thrown into the bin and that he died there from suffocation when wagon after wagon load of garbage was dumped in upon him.

### TRADE OF CANAL ZONE LOOKS GOOD

San Francisco Merchants in Motion to Get a Good Slice of It.

San Francisco, July 11.—The merchants of this city and state are after the Panama trade. A movement was set on foot today by the merchants of this city, through the chamber of commerce, to get a list of the California products needed by the government on the canal zone and present bids.

### ACTOR COLLIER IS ROBBED OF \$500

(United Press Leased Wire.)  
Tacoma, July 11.—When William Collier was bowing his acknowledgment to repeated curtain calls at the Tacoma theatre last night in "Count in the Rain," he was wondering if the man who during the day had robbed him of \$500 was somewhere in the audience, laughing at him?

### COLONEL CUMMINS GETS A LOVING CUP

(United Press Leased Wire.)  
Port Townsend, Wash., July 11.—Exercises more important than any ever before marked the existence of Port Townsend as an artillery garrison were brought to a close yesterday in honor of the retirement from active army service of Colonel Albert S. Cummins, commanding the district. The stellar feature of a long list of notable observances of the occasion came when in the presence of officers of the district the retiring officer was presented with a massive loving cup, a gift from the officers over whom Colonel Cummins had presided for the past 13 months.

### ROOSEVELT INVITED TO SEATTLE'S FAIR

(United Press Leased Wire.)  
Oyster Bay, N. Y., July 11.—President Roosevelt's invitations ever issued to a president of the United States. It is a three-sided lantern, made of pure white leather, upon the sides of which are inscribed a request that he attend the Alaska-Yukon-Pacific exposition at Seattle next year. Federal Judge Field of Alaska presented the lantern to the president.

A kind of Baltic skin powder, transformers were able to sell skin. In 4 that. 20.

# It's a Great Property

## "You Have the Foundation Laid for Another of the Wonderful Millionaire-Makers of Idaho"

P. L. Austin, President and Treasurer.

Similar expressions to these came thick and fast from the lips of Captain H. D. Williams, an expert Colorado mining engineer, who has just returned from an examination of the Poticie Gold Claims, Beaver District, in the Coeur d'Alenes, Near Murray, Idaho.

"A large porphyry dike runs directly through the claims, and the iron formation is characteristic of high-grade gold ore. It is now but a question of development and THE POTICIE MINING COMPANY WILL HAVE ONE OF THE BIG SHIPPERS OF THE COEUR D'ALENES," that region so famous for its gold, silver, copper, lead, and other minerals, and which, figuratively speaking, Has Made Millionaires of Paupers, Autocrats of Medicants and Colossal Fortunes for the Tribesmen of the Shovel and the Pick.

It is the region that has supplanted want with luxury dispelled poverty with the lavish hand of plenty, exchanged castles for cabins, opulence for penury, and garished slavish servitude with the glittering sapphires of ease and smiling gems of comfort. In few words, this is the story of generous Idaho, and her storehouse is as full today as ever, and her riches are being uncovered in greater volume at this time than at any previous period in her history, embalmed as it is in the most precious metals of the world ever has known. Over and over, and over, has been portrayed by pen and picture the enormous wealth of those rugged mountains, and as late as 13 days ago, on June 26.

### A Portland Daily Newspaper Contained the Following account of One of the Most Recent Strikes of That State's Gorgeous Piles of Prolific Ores:

(Special Dispatch to The Journal.)  
Wallace, Idaho, June 26.—One of the greatest ore strikes ever made in the history of the Coeur d'Alenes took place yesterday afternoon in the property of the Anchor Mining Company, located between the Mammoth and Hecla mines, at Burke. The strike consists of one foot of carbonates carrying enormous values in silver. Ordinary assays of this ore give a return of 1,250 ounces to the ton, and picked samples range all the way from 2,000 to 4,000 ounces to the ton. In addition to this, two feet of crystallized lead ore has been exposed of an average assay value of from 85 to 90 per cent.

The strike was made on a claim known as the Diamond Hitch, at the bottom of a 35-foot shaft, and at a distance of only 75 feet north of the Northern Pacific track. The claims of the company were operated about 10 years ago by the Diamond Hitch Company, and a little ore was shipped, but work on the property was given up, owing to the difficulty of keeping the property clear of water.

### Great Porphyry Deposits.

The great porphyry dike of the Poticie claims may be said to be almost identical with the reddish or purple rock found in Upper Egypt, principally at Jebel Dokhan, and much used by the ancients as decorative stone. This porphyry, the portido rosso antico of Italian antiquaries, consists of a dark crimson or chocolate-colored felsitic base, with disseminated crystals of white feldspar, probably oligoclase. It was a favorite material with Roman sculptors under the lower empire, and, notwithstanding its excessive hardness, was worked into large sarcophagi and other objects, ornamented in some cases in elaborate relief. This porphyry was also ingeniously used for the lower part of the busts of Roman emperors, the head being executed in another material, while the porphyry was used for the drapery. While valuable, therefore, in itself, in the region of Idaho's productive mines, it is considered the almost inseparable companion of gold in its richest territory.

### You can own an interest in these eleven claims for ten cents. You can own an interest likely to make you rich for \$100. You are in line for absolute independence at a cost of \$200, and buy on credit, too

The placer claims indicated have produced many hundreds of thousands of dollars. Our engineer says a big porphyry dyke runs through our property and a contact between the porphyry and quartzite, carries an enormous load of oxidized iron quartz, which is the genesis of gold in the placer mines on either side of our property.

Our assays show \$59.47, \$62.93, \$46.56, \$29.96, \$23.02, \$240.71 and \$108.56 to the ton.

Do you understand the meaning of these facts and conditions?

### We Are in the Boat the Mohawk Was In.

We need some more money to now complete development of our property. We never offered a share of Poticie stock for sale until we had PROVEN that we had a mine. We did not sink a prospect hole and then shout, "COME ALONG BOYS, AND LET'S SEE IF WE HAVE ANYTHING!" Instead, we went along ourselves and bored tunnels into the mountain and paid the bills until we have demonstrated the fact that there are fortunes there for scores of people, and the 80,000 shares of stock we have put upon the market will unlock the gates to the treasure beds and pull back the rocky curtains that have hidden it from view ever since the dawn of time.

### Tracks Laid and Cars Installed.

President Austin has just returned from the mines. While there he witnessed the completion of the track and installation of the ore cars. This improvement is now complete, and if ever there was a mining property thoroughly equipped for perfect work at the smallest expense, ours is that one. And as faithfully as the pendulum of the clock swings to and fro does the development of our mine proceed, and

### We Can Conceive of No Other Result Than That We Shall Pay, Beginning Before Many Months, Dividends That Will Aggregate as Great on Our Investment as That of the Famous Bunker Hill and Sullivan or of any Other Mine Within the State.

But there is one thing certain, these shares will not long be sold at present prices and on present terms. We sincerely believe that within a year this stock will be selling at as much as \$1.00 the share. And it will be our big dividends that will cause the rise. They are bound to come! No human hand can long delay them. And they will be so big as to amaze our people.

# The Poticie Mining Company

Room 3 Raleigh Building, Sixth and Washington

P. L. AUSTIN, President and Treasurer

LOUIS MEYER, Vice-Pres. and Secretary

Incorporated Under the Laws of Washington for \$1,500,000, \$900,000 in the Treasury All Shares at Par Value of \$1.00 Each, Fully Paid and Non-Assessable

### \$169,051,275 Taken From Our Neighbor Mines.

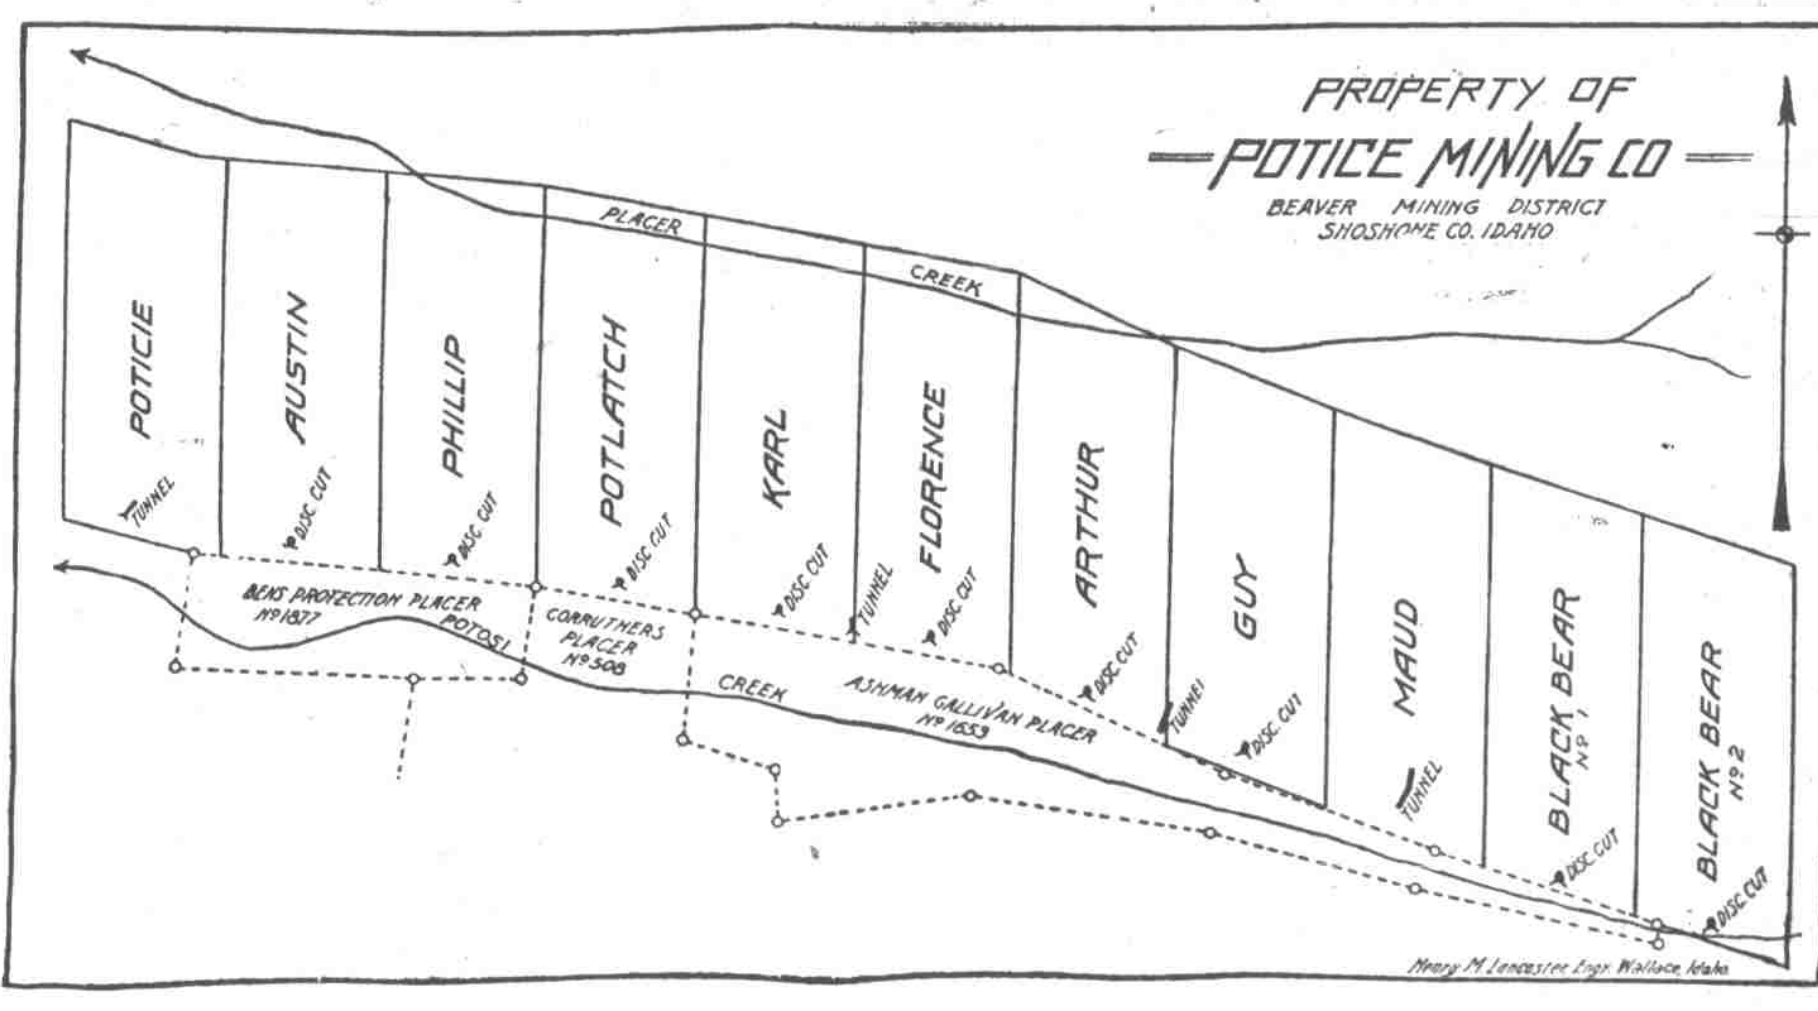

Pause for a moment and contemplate these figures. There are ten hundred thousand dollars in a million, and MORE THAN ONE HUNDRED AND SIXTY-NINE TIMES TEN HUNDRED THOUSAND DOLLARS HAVE BEEN MINED FROM THE COEUR D'ALENES ALONE! In silver this would weigh almost FIVE THOUSAND TONS! This is not guessing, but government figures. It is from reports of the Director of the Mint, and THE PRODUCTION OF THE COEUR D'ALENES AT THIS TIME IS GREATER THAN AT ANY PRIOR DATE IN HISTORY. The celebrated Snow Storm has 1,000 tons of ore blocked out now, the Bunker Hill & Sullivan is paying \$180,000 per MONTH in dividends, and every little while distributes a bonus of the same amount. From here there is a perfect chain of mines and mineral passing directly through our property, knitting together the Murray Gold Belt so closely that there is no more chance of our being without the zone than there is a chance for the State of Idaho to disappear from the American map. In fact, it is estimated that there is mineral enough in the Idaho mountains, peaks and valleys to distribute \$100 each to every man, woman and child in the United States.

### But What About the Poticie Mines?

This is likely what interests the reader of these lines. We own 220 FULL acres of ground—11 FULL claims—free from all incumbrances, so far developed that we can speak with the utmost confidence when we predict that within a few months at most we shall be producing ore AS RICH AS ANY IN THE CAMP. And that means the beginning of the accumulation of fortunes for our stockholders—INDEPENDENT FORTUNES for all those who hold stock in any great quantity, and plethoric incomes for all—according to the investment.

### A Portland Bank Clerk's Wisdom.

(Portland Evening Telegram, August 16, 1907.)  
Robert F. Scott was a clerk in the First National Bank, Portland, for more than a dozen years. He had apartments at the Newcastle rooming-house, Third and Harrison. Two years a friend induced him to place \$150 in the stock of the Mohawk gold mine of Goldfield, Nevada, from the sale of which three months ago he realized the snug little fortune of \$100,000, and is now enjoying himself taking in the sights of the Holy Land. To earn that much at his desk in the bank would have required continuous labor for more than 87 years, but the \$150 he invested in gold mine stock represented but six weeks' work. The reason the Mohawk people sold that stock was to secure sufficient funds to develop the mine. This was accomplished, and its shares are now soaring along at \$17.50 each. In fact, mining stock profits in Goldfield have been so marvelous that it is difficult to believe the truth concerning them. For example, \$5 worth of Mohawk stock, procured when its shares first were placed on sale could since have been disposed of at \$2,400; \$10 invested then would since have brought \$6,800; \$20 then, \$13,600 since; \$40 then, \$27,200 since; \$80 then, \$54,400 since; \$100 then, \$68,000 since; \$150 then, \$102,000 since; \$200 then, \$136,000 since; \$400 then, \$272,000 since; \$500 then, \$340,000 since; \$1,000 then, \$680,000 since, and \$2,000 then, the enormous sum of \$1,360,000 since!

### They Will Confound the Pessimist and Fill the Optimist's Heart With Joy.

Then will Poticie stock soar up as the eagle, and be sought for on every hand. It will be another of the great money-makers of the West, and many will rejoice that they own its shares. He who was a servant will be a servant no more, and he in practical bondage to ceaseless toil and comparative poverty will lift his head in independence and frown upon the weariness and languor of days ago.
