## BUTTER PRICE TO MOVE AGAIN CHICAGO WHEAT MARKET LOWER

### Those Who Did Not Advance to 24c Will Do So Monday Morning, Say Trade.

By Hyman H. Cohen.

It is quite generally understood that all the local butter makers who did not advance their quotations to 24c the past week will do so Monday morning.

This condition is practically a foregone conclusion, inasmuch as the butter makers are already paying on a basis of the higher butter price for their cream. There is no need for them to lose the additional sum.

Things are getting rather interesting in the butter market at this time, and any further advance in the general market will of necessity be made with some caution. At the present time the local butter market is one of the highest in the country—in fact the advance over eastern prices is so marked that shipments can be made from here to the Pacific coast with much profit. The low butter prices in the east are due entirely to the late season, which made the "flush" come much later than usual, and thus forced the market out of line from what it had been in previous seasons.

There was a report about this time that butter should be considerably higher in the east, but the grassy season was prolonged for so long that the butter makers made that the storage plants there are filled to overflowing. This has a tendency to hold in check any further advance in price.

On the other hand conditions are just the reverse in this territory. The past week has been a very busy one for the extreme dryness and the "flush" of the season had started the summer months were on and the result was a surplus of butter. The dry up of supplies of fresh butter in the Pacific northwest at this time are below the requirements of the trade, and in the matter of prices the trade seems to have been fully justified in making late advances. However, the general market in their present glutted condition it is dangerous to get local prices too far out of line, for what several weeks of eastern buyers in route it would surely cause a downfall of local values, for with eastern butter here it would not be so much of a question of price as to get rid of the supplies.

Then again local butter makers should be of the opinion that the coming of home production. With the coming of the rains there will be another "flush" here and this will mean that prices will be lower.

### Trade Is Slow and With Liv- erpool Down Prices Ease Off Somewhat.

(United Press Leased Wire.)

Chicago, Sept. 26.—Trade in wheat at the opening was slow, with orders from outside scarce and local operators also indisposed to activity. Prices under these circumstances were substantially lower, but offerings were light at the decline. Weather forecast for the next 24 hours changed the apathy of buyers, and demand increasing there was a rapid recovery. Liverpool reported futures from unchanged to 1/4 lower. Continental markets were substantially without change. The market averaged strong, but had frequent intervals of a quietness, and in large part being experienced near the end. At the close September, December and May each 1/4 lower.

There was no great activity in corn, although the announcement of the weather bureau that rain and frost to follow, would spread over the entire western corn region. That had been a probability for several days and appeared to have been in large part dis- counted, for the effect on prices was comparatively trivial. Demand was good in the sample market. September was 1/4 lower, the others about 1/4 higher.

In oats business was of the usual mid-season dullness, with large inter- ests are not actively engaged, and fluctuations over so small a range as to offer little inducement to speculators.

It was a dull day in the market for provisions, and the most obtrusive feature was the buying of September deliv- ery by brokers who usually act for packers.
