Campbell's Automatic Safety Gas Burner

ABSOLUTE SAFETY ASSURED EVEN THOUGH GAS IS BLOWN OUT AND JET IS TURNED ON FULL

These Are Facts

If You Doubt Them Come Up to 307 Goodnough Bldg. and Be Convinced

Campbell's Automatic Safety Gas Burner makes the use of gas for either heating or lighting purposes absolutely safe for the following reasons:

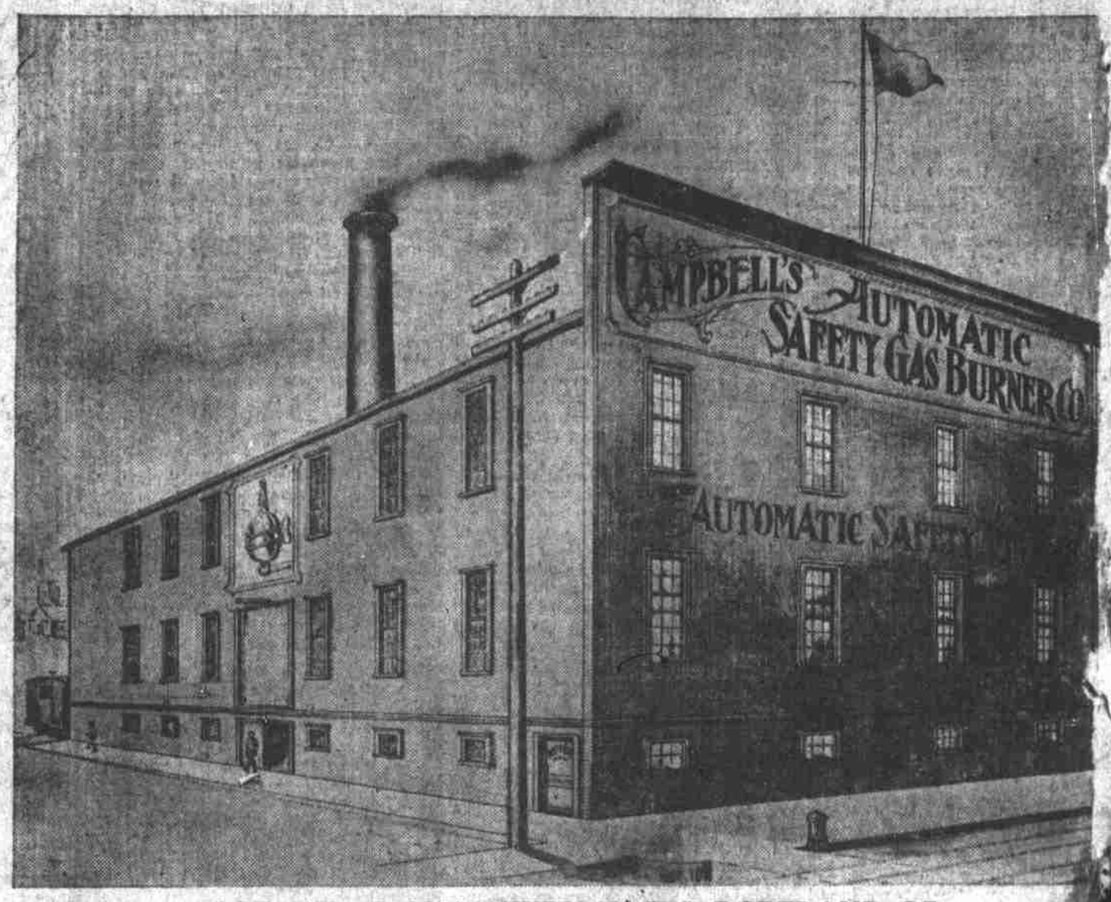
1st. This burner is controlled entirely by the HEAT FROM THE BURNING GAS, and if, for any reason, the gas is not kept burning, the flow is automatically cut off.

2nd. If a person unskilled in the use of gas should blow out the flame, and not turn off the gas, this burner will do so automatically.

By means of a simple device, involving the application of a thermostat for regulating heat and cold in gas burners, the gas valve shuts off automatically when the flame goes out and the thermostat attachment becomes cold, making it impossible for the gas to escape and averting all danger of asphyxiation.

IT IS NEEDED WHEREVER ARTIFICIAL AND NATURAL GAS, GASOLINE OR ACETYLENE ARE USED, AND ITS USE WILL EVENTUALLY BE REQUIRED BY LAW.

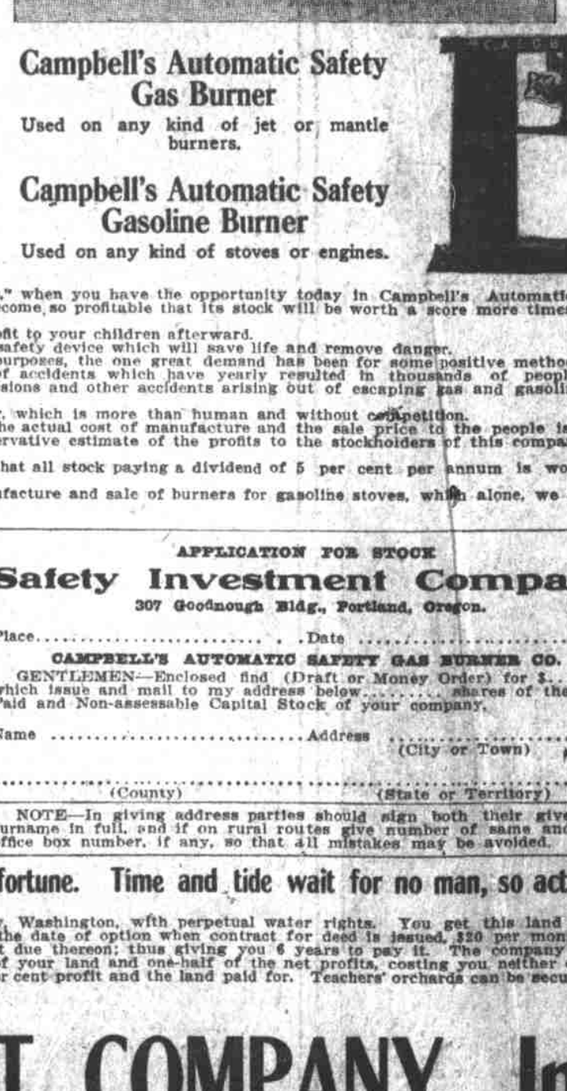
When You See These Facts Demonstrated You Will Recognize the Merits of the SAFETY BURNER



FACTORY 22D AND THURMAN STS., PORTLAND, OR.

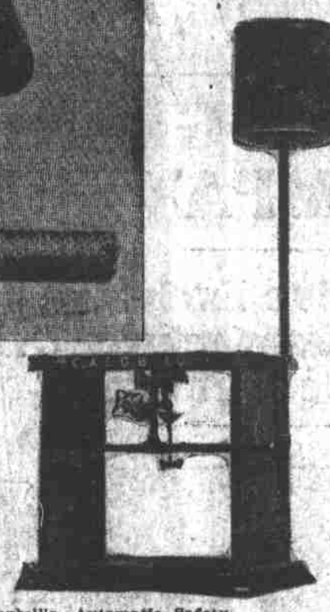
Your Last Opportunity

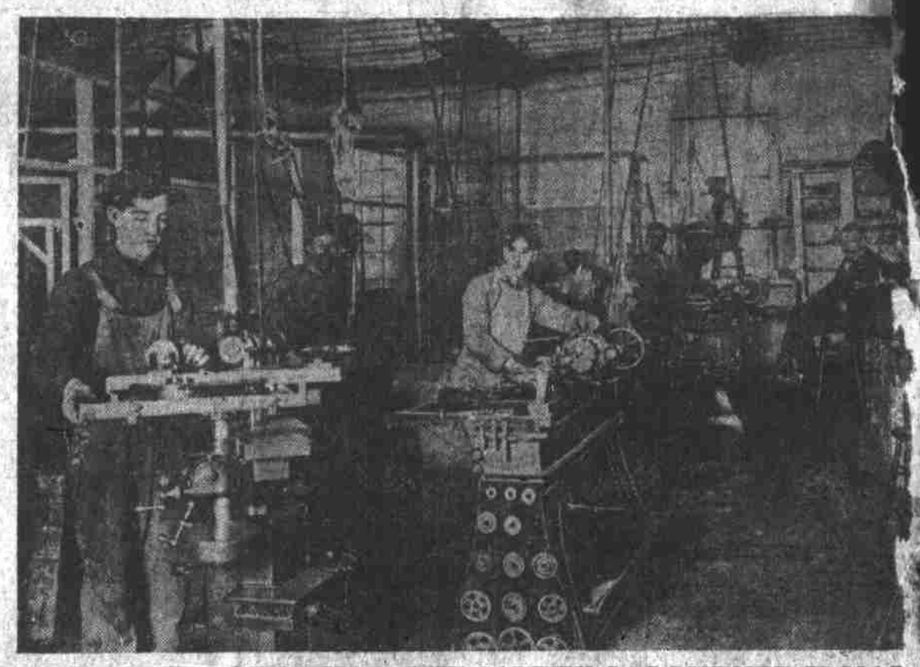
In order that sufficient money may be raised to equip this factory to manufacture these safety burners, the last 1000 of fully paid and non-assessable shares of the stock of the company allotted for this purpose are offered to the public at the low price of $10.00 per share. The same may be had either by calling personally at the office of the Safety Investment Company, 306-307 Goodnough Bldg., Portland, or by mailing this application with your draft to the company. When these shares are sold the stock will be withdrawn from the market, as the experimental stage is past and the factory will be fully equipped and turning out the safety gas burners on a grand paying basis. If possible come directly to office **TODAY**, as tomorrow may be too late. This is your opportunity.



Campbell's Automatic Safety Gas Burner
Used on any kind of jet or mantle burners.

Campbell's Automatic Safety Gasoline Burner
Used on any kind of stoves or engines.





MAIN WORKROOM WHERE THE SAFETY GAS BURNER IS MAL

IF YOU ARE — IF YOU ARE OTHER — WISE — YOU WILL ACT NOW — YOU WILL MISS IT

Why speculate upon propositions which hold out only "hope" and "prospects," when you have the opportunity today in Campbell's Automatic Safety Gas Burner Company to become a stockholder in an enterprise which soon will become so profitable that its stock will be worth a score more times its par value?

Subscribe today and get the benefit of the investment while you live, and profit to your children afterward.

All gaseous substances are dangerous, hence the necessity for an automatic safety device which will save life and remove danger.

Ever since gas and its bi-products have been used for heating and lighting purposes, the one great demand has been for some positive method whereby its use could be automatically controlled and thereby remove all possibility of accidents which have yearly resulted in thousands of people losing their lives and causing millions of dollars in losses through asphyxiations, explosions and other accidents arising out of escaping gas and gasoline. The great human problem has now been solved.

This device is found in Campbell's Automatic Safety Gas and Gasoline Burner, which is more than human and without competition.

Until every enterprise has reached the stage in the business world where the actual cost of manufacture and the sale price to the people is known, there is the element of estimate, so the following is believed to be a very conservative estimate of the profits to the stockholders of this company when our factories are on a producing basis, as found in the schedule below.

This estimate is based on 300 factory days in the year, and on the theory that all stock paying a dividend of 5 per cent per annum is worth par, and the capital stock of the company is $500,000.

Remember, this estimate does not include the profits arising out of the manufacture and sale of burners for gasoline stoves, which alone, we are told, will increase the value of our stock many fold.

Daily Output.	Profit Each.	Year's Profit.	Year's Dividend.	Value per Share.
1,000	25c	$ 75,000.00	15 per cent	$ 15.00
2,500	25c	187,000.00	37 per cent	37.00
5,000	25c	375,000.00	75 per cent	75.00
10,000	25c	750,000.00	150 per cent	150.00
15,000	25c	1,125,000.00	200 per cent	225.00
20,000	25c	1,500,000.00	300 per cent	300.00
30,000	25c	2,250,000.00	350 per cent	450.00
50,000	25c	2,750,000.00	600 per cent	750.00
100,000	25c	7,500,000.00	1,500 per cent	1,500.00

Remember, this is not a wild estimate, when this device becomes a necessity by force of law for the protection of life, as this is a basic patent and the only automatic safety device as applied to gaseous substances known, and is without competition.

It does not require an interpreter to show you the fact that all basic patents have netted the stockholders large dividends, until today stock in some companies capitalized for many millions cannot be had in the market, and when a share does change hands it is for almost fabulous sums, compared to the original amount invested when the company was forming.

APPLICATION FOR STOCK

Safety Investment Company
307 Goodnough Bldg., Portland, Oregon.

Place..... Date .....1908.

CAMPBELL'S AUTOMATIC SAFETY GAS BURNER CO.

GENTLEMEN—Enclosed find (Draft or Money Order) for $.....for which issue and mail to my address below..... shares of the Fully Paid and Non-assessable Capital Stock of your company.

Name .....Address .....
(City or Town)
.....
(County) (State or Territory)

NOTE—In giving address parties should sign both their given and surname in full, and if on rural routes give number of same and post-office box number, if any, so that all mistakes may be avoided.

Do not throw away this opportunity, which will bring you a fortune. Time and tide wait for no man, so act today

TEACHERS' ORCHARDS

These are irrigated tracts in Chelan county, Washington, with perpetual water rights. You get this land for $10 down with option, $50 within 30 days after the date of option when contract for deed is issued, $20 per month for 6 months, then $50 each 6 months and interest due thereon; thus giving you 6 years to pay it. The company guarantees you 10 per cent per annum on the cost of your land and one-half of the net profits, costing you neither care, attention nor more money, with a net of 50 per cent profit and the land paid for. Teachers' orchards can be secured only through the undersigned.

Campbell's Automatic Safety Gas Burner Company

306 Goodnough Building — **PORTLAND, OREGON**

PORTLAND BECOMING WORLD FAMO

Capitalists and Investors From All Over America Being tracted Here—Brightest Future of Any Coast City.

It does not dawn on the casual ob- regulating heat and cold in gas burners, complete mechanism in the Ca
server that Portland is making astonishing strides in the manufacturing business. The old-timer who rarely ever gets beyond the business environments, or without short walking distance of his domicile, can scarcely conceive the expansion that is going on in every direction, and especially the remarkable growth of our industrial institutions. The hundreds of new additions to factories, and the multiplicity of our Industries, prove conclusively that Portland has begun an era of great prosperity. That there will be no diminution in the city's progress is the firm belief of every one who has taken any interest in the future of Oregon's metropolis.

Of all the numerous industries, it can be said that the one presented on this page will possibly advertise Portland better than any of the others, inasmuch as the Campbell Automatic Safety Gas Burner will be in more universal use than any other product. This is obvious to all who know that the Campbell Automatic Safety Gas Burner is the only perfect safety gas burner ever invented.

The inventor, Victor Emanuel Campbell, a well known coast jeweler for 20 years, has after 12 years of continuous experimenting perfected a safety gas cutoff which makes it absolutely impossible for gas to escape, even though the flame should be blown out or the jet turned on accidentally, or the pressure be reduced in the gas main. Skeptics will doubt of such an invention, but seeing is believing, and any one who takes the trouble to visit the demonstrating room, 307 Goodnough building, corner Fifth and Yamhill streets, will go away firmly convinced of all the claims of the inventor.

The heat of the flame regulates the burner. By means of a device involving the application of a thermostat, for the gas valve shuts off automatically when the flame goes out (whether turned off or blown out) and the thermostat attachment becomes cold, making it absolutely impossible for the gas to escape and thus eliminating all danger of asphyxiation. Patents have been secured in the United States, Canada, Great Britain, Germany, France and Belgium, while others have been allowed in many other countries. The factory at Twenty-second and Thurman streets is a busy place just now. It is equipped with the most modern machinery. The site, which is owned by the company, has a frontage of 134 feet on Thurman and extends 200 feet on Twenty-second to Upshur street. The new United Railways line passes on Twenty-second street. This is a valuable property acquired last July. Since buying it the company refused an offer of $10,000 more than it paid for it. The basement floor is the general storeroom for the raw material, the buffing room and plating plant, with sufficient provision for the manuufacture of the gasoline and denatured alcohol stoves and burners. The second floor is the main factory and toolroom, which is equipped with the latest improved machinery, such as milling and gear cutting machines, brinders, lathes with the latest taper and relieving attachments, etc. A 3700-pound drawing press with a four-inch stroke, the largest in the Pacific northwest, has just been installed. The third floor is the wire department and assembling room for their devices. All kinds of wire goods for general sale, and special goods are manufactured.

The Campbell Automatic Safety Burner company manufactures its own dies, it being the only firm on the coast that makes these and similar dies. The company has its own draughting department and experts make drawings from ideas submitted, and all work is completed in this modern factory. The
