A Revolution in Post Card Projectors

Many opaque projectors have recently been placed on the market, and, although they have enjoyed a heavy sale, because of popular demand, they have left much to be desired. The low-priced instruments have been practically worthless, and those of medium price have been a disappointment in operation. The definite and pressing demands are for sharper pictures on the screen, greater luminosity of picture, freedom from overheating; elimination of reflections on glossy pictures; greater durability in design and finish, and popular prices. All sizes, fitted for gas, acetylene or electricity. The Radiopticon meets all of these needs.

Radiopticon, \$5.00

NO. 1 RADIOPTICON—Equipped with new double lens system, multiphase reflection. This instrument is fitted with convenient hinged lock, on which is mounted the new curved, reversible picture-holder. Highly polished, oxidized copper plate finish. Postcards are shown from end to end, sharp and clear. This size, very special **\$5.00** Others at \$8, \$10, \$12. Call for demonstration.
