

Oregon Will Be Well Represented at Northwestern Products Exhibition

Products will be shown from floor space in center of building at Minneapolis, Minn.; Oregon day will be observed November 16; course of lectures will be given during session.

By Lloyd W. McDowell.

Minneapolis, Minn., Nov. 2.—Oregon is to have a one-seventh exhibition in the Northwestern "Products" exposition in Minneapolis from November 12 to 23. The state will occupy 500 square feet in the center of the First Minnesota Armory and Oregon day will be celebrated November 16. The second annual land show of the Northwest Development League will open in 10 days and the states participating in the exhibition of the soil have taken such an interest in the enterprise that every exhibit will be in place the day the exposition throws its doors open to the world.

The Minneapolis exposition this year, like the first annual land show at St. Paul last year, will serve as a most liberal education to the thousands of visitors as to just what Oregon offers to the homeseeker. The St. Paul land show was viewed by more than 50,000 people.

It is conservatively estimated that the Minneapolis land show of the development league will attract the attention of more than 150,000 people. Oregon, as one of the seven states in the development league, will have an equal share with Minnesota, Montana, North Dakota, South Dakota, Idaho and Washington in the great benefits from the display of its varied resources for two weeks in Minneapolis.

Every land show has its value. The constant display of the products of the soil serves to keep the "back to the soil" movement foremost in the minds of the people. In selecting the Twin City for the annual land show of the development league St. Paul and Minneapolis will prove to be the logical place for a show of the products of the northwest for many reasons. First it is through the Twin City that thousands of homeseekers pass annually and are distributed over the northwest by the railroads. The exposition is being extensively advertised by the passenger departments of the various western rail lines as well as the systematic campaign of exploitation on the part of the league's publicity bureau.

Special Rates Offered.
Within 200 miles of the Twin City are more than 3,750,000 people. It is to this vast number of rightly thinking men and women that the message of the northwest has been carried. Special railroad rates have been offered as an attraction and coming at a time when the farmer is finished with his work for the year the exhibition of the soil is bound to prove an attraction. Throughout Iowa, Illinois, Ohio, Indiana and Wisconsin the exposition has been given widespread publicity with a view to attracting to Minneapolis a class of visitors that are thinking about a home in the northwest and here may see the various states truthfully represented by comprehensive displays.

The Minneapolis exposition will serve to exploit the products of the soil, mines, lakes, rivers and forests of the great American northwest. The land show of the character of the St. Paul and Minneapolis shows is such as to attract the serious-thinking men and women. There will be nothing there for the idle curios.

You Should Have Seen the Pimples

But Now Her Face Is the Fairest of the Fair, Due to Stuart's Calcium Wafers.

Those dimples are like pearls in a ruby cluster when Stuart's Calcium Wafers clear the face of every pimple, spot and blemish. And even if you haven't dimples, the clear, transparent skin of a healthy Calcium Wafer complexion is more radiant than the delectable touch of an artist to the most exquisite water color.

Stuart's Calcium Wafers act directly upon the sweat glands of the skin, since their mission is to stimulate the excretory ducts. They do not create perspiration, but cause the skin to breathe out vigorously, thus transforming perspiration into a gaseous vapor. The calcium sulphide of which these wafers are composed, consumes the germ poisons in the sweat glands and pores, hence the blood makes a new, smooth skin in a surprisingly short time.

You will never be ashamed to look at yourself in a mirror, once you use Stuart's Calcium Wafers. Nor will your friends give you that hinting look, as much as to say—for goodness sake, get rid of those pimples.

There is no longer any excuse for anyone to have a face disfigured with skin eruptions, when it is so easy to get rid of them. Simply get a box of Stuart's Calcium Wafers at any drug store and take them according to directions. After a few days you will hardly recognize yourself in the mirror. The change will delight you immensely. All blemishes will disappear.

All druggists sell Stuart's Calcium Wafers at 50 cents a box.

Large structure is Minneapolis armory and annex, where northwestern products exposition will be held from November 12 to 23. Top, right hand corner—Lewis Penwell, president of Northwest Development League, and president of northwestern products exposition. Bottom—William A. Campbell, secretary Northwest Development League, and manager northwestern products exposition. Section of Oregon exhibit placed by Oregon state immigration commission.

of amusement seeker. It will be a geography of the northwest brought into life by the presence of wonderful displays of exhibits with intelligent representatives of the various states there to explain the resources and possibilities of the "Zona of Plenty."

Oregon's Space Advantages.
The space given Oregon this year is in one of the most prominent places in the big armory building. The booth will be so arranged as to be readily seen from several entrances and the exhibits are of such a nature as to prove most attractive. Every section of Oregon, with its 61,887,360 acres is to be represented and Oregon's display will be somewhat in the nature of the birds-eye view of the wealth of the state and what it now offers to the homeseeker, merchant and investor.

While the program for Oregon Day, November 16, has not as yet been arranged it is hoped to have several prominent men of the state here to deliver addresses and if Governor Oswald West is present here as delegate to the Second Minnesota Conservation and Agricultural Development congress he will preside at the Oregon Day exercises.

FARMERS' WEEK IN DECEMBER NOW

O. A. C. Sets It When Home Duties Can Most Easily Be Left.

(Special to The Journal.)

Oregon Agricultural College, Corvallis, Or., Nov. 2.—There is an increased demand for short course instruction by farmers' clubs. This demand seems to come from practically all the states where there has been effort made to interest the farmer and the farmer's boy. The interest taken by some county school superintendents has aroused a sentiment for the short course.

The farmer's institute has also been a prolific source of stirring up a desire for the short course to be held in various communities in the nature of lectures on crops, livestock, dairying, horticulture, etc. This system of agricultural instruction going to the farmer in his own home or school district is the best evidence of sincerity in his work and at once enlists the sympathy of the person of little faith in his work. The present plan of demonstration by going to the farmer and instructing him how to do his work is the key to rapid improvement in better methods of farming.

There is no feature of organization that can equal the county school superintendent when in touch with his work. The teachers of a county have practically the control of the boys and girls, and the boys and girls have control of the parents and can influence to any reasonable degree, in carrying into effect a good attendance at the short course instructions or lectures that the superintendent may plan to arrange for the winter short course immediately. It is to be held December 9 to 14, and the short course January 6 to February 7. The change was made because it was found that Oregon farmers can leave their home duties more easily at that time, just before Christmas, than at any other. It is manifestly impossible to place the full short course of four weeks (besides the farmers' week) at that season, since none would care to be away from home at either Thanksgiving or Christmas time.

Like the short course, the farmers' week is crowded full of lectures and practical demonstrations calculated to solve the daily problems of farm life. Dairying, fruit growing, truck gardening, stock raising, the use and care of farm machinery, farm use of concrete, soils and crop rotations, drainage and irrigation, and a vast number of similar topics of vital interest to the man who is getting his living off his acres, are included in the program.

A vigorous policy of agitation for state ownership of British mines was announced by President Robert Smille at the annual meeting of the Miners' Federation of the United Kingdom.

Oregon Agricultural College, Corvallis, Or., Nov. 2.—Do you know absolutely what the soil of your farm or orchard contains? If not, how do you know, except by guesswork, what fertilizer it needs, and what crops will grow best there?

The man who does not know these things is unlikely to make the maximum success of his farming. His only excuse is that he does not know how to find out these things. For this reason the department of agronomy has prepared printed instructions for soil sampling at the Oregon Agricultural college, and any farmer who will send samples, taken according to these directions, to Professor H. D. Scudder, soils specialist of the experiment station, will receive a report containing information of vital importance to his farm.

Take samples from an open field and

November 19. Montana follows on November 20 and Washington and Alaska November 21. On November 22 will come Seven States and Conservation Congress day and on November 23 Idaho will celebrate the closing of the exposition.

The Oregon exhibit has been promised for an early date and it is to be hoped it will be installed and ready as promised for the opening of the big exposition. One of the features of the exposition will be a large lecture hall where Oregon lecturers will have ample opportunity to deliver their message of the state's vast possibilities to the thousands of visitors.

O. A. C. WILL MAKE ANALYSIS OF SOIL ON OREGON FARMS

Samples Should Be Taken From Open Field and From Various Depths; Locality Must Be Fully Stated.

(Special to The Journal.) Oregon Agricultural College, Corvallis, Or., Nov. 2.—Do you know absolutely what the soil of your farm or orchard contains? If not, how do you know, except by guesswork, what fertilizer it needs, and what crops will grow best there?

The man who does not know these things is unlikely to make the maximum success of his farming. His only excuse is that he does not know how to find out these things. For this reason the department of agronomy has prepared printed instructions for soil sampling at the Oregon Agricultural college, and any farmer who will send samples, taken according to these directions, to Professor H. D. Scudder, soils specialist of the experiment station, will receive a report containing information of vital importance to his farm.

avoid paths, gopher holes, etc., from which modified and not typical samples are likely to be obtained," says Professor Scudder. "Select an average spot; pull up the plants growing on it, brush aside half decayed vegetable matter and bore or dig a vertical hole to where the soil changes tint, or, if no change is seen, to the depth of cultivation. Get a sample of the soil to this depth from several places in the field, mix well on cloth or coarse paper (avoid jute bagging). Then dry it, put a quart in a clean canvas bag or a box and label. This represents the surface soil."

"In the same manner get an average sample of the subsoil, taken below the surface sample to the depth of approximately two feet. Put it in a separate bag and label that also. Dig or bore to a depth of three or four feet, and if you have any other peculiarity in structure is noted, send a properly labeled sample." If solid rock is found, state at what average depth it occurs and send a small sample.

"Send a letter by mail with as complete a history of the field as possible, the name of the nearest town, the probable selling price of the land, the elevation above the nearest river, the direction and grade of slopes. Tell how long it has been cropped and what has been raised on the land, what yields were and whether fertilizers have been applied. If there are any peculiarities which may have a bearing on the agricultural qualities of the soil they should be mentioned in the letter. The samples should be expressed, prepaid, to the experiment station soils department."

Toronto, Ont., furriers will organize. Journal Want Ads bring results.

DOG, THOUGHT MAD, TERRORIZES MANY

(Special to The Journal.) Grass Valley, Cal., Nov. 2.—A dog believed to have been in the early stages of hydrophobia, ran amuck at the entrance to a moving picture show, hitting several people. None of the bites, however, is serious.

The dog bit a woman who was about to purchase a ticket. She wore a long coat, however, and only gave the sharp sting passing attention. A short time afterward the dog jumped through the ticket office opening, making for the head of Will Williams, who was selling tickets. Williams happened to have a stiff hat and he snatched it from his head, thrusting it into the dog's face. The frenzied animal, a spotted hound, tore a jagged hole in the hat, then grabbed it and fled down the street.

Boy Holds Dog.
It paid no attention to a little child a short distance down the street, but grabbed at a man named Minard, gnashing its teeth into his left elbow. After inflicting several other minor bites to pedestrians, a high school lad, Joe Foster, grabbed the dog by the neck and held it until the arrival of Marshal Davis. The first shot took effect, but did not kill, and the wounded canine made a leap at the marshal. The next shot killed the dog. Dr. Chappelle severed the head of the animal, which was sent to Sacramento for examination for rabies.

Early Xmas Shopping

is not only commendable from the standpoint of making the work of the young woman and the young man behind the counter easier and more pleasant, but well worth while for the consumer—for YOU—because it enables you to choose from fresh, new stock and from larger and more complete assortments. "The early bird," etc., is just as applicable to the popular "Shop Early" movement as to anything else—from YOUR standpoint! Our Christmas displays await your early inspection.
