# THE PEOPLE'S INSTITUTE OF DOMESTIC

F YOU remember your history that you mastered years ago, you will recall that the world's progress can be understood by the type of instrument that predominated in a division of historical effort. The Stone Age and the Bronze Age are facts that are rich in coniont for any one that has had even the most casual interest in the human race and its development.

Which name will be placed opposite this age? There are many suggestions, but Miss Anna Barrows, of national fame, has substantiated her title on this page in her characteristically convincing way. If you do not agree with the name, there are many things to be learned; if you do, there are still things to be learned. This page has always something to give its readers in exchange for their time.

And just as a parting thoughtlet not the Newspaper division of the Paper Age be ignored by you.

## By Anna Barrows Lecturer on Domestic Science, School of Domestic Arts, Columbia University, New York; Director School of Domestic Sci-

paper. No article we use is much cleaner than clean, fresh paper. What wonder that its use is increasing!

Sheets of paper wrap all our packages, and still special paper cases are made to fit nearly every type of article transmitted between producer and consumer. Oysters and he cream are delivered in paper cases, ples from the baker and butter from the grocery store come in paper plates, the milk bottles have paper covers.

Since people are buying their foods in smaller and smaller lots, more and more paper in proportion is required. Incidentally, the consumer pays for these luxuries, whether it is weighed with the food or not. The grocer's profit must be large

enough to cover every expense, from his rent to the string that ties each parcel. Even so, we are not content with a single wrapping; the meat or cheese first must be covered with a choicer grade of paper, parchment or paraffin, and then folded in a stronger sheet for

further protection. Paper-bag cookery cannot be considered as wholly a recent invention, for some one long ago discovered that there was no daintier way to prepare chops

bags which have brought supplies into the house, and they should be folded in their original shape and be kept in a suitable place. The double bags used by some grocers to insure against breakage and loss of such materials as sugar often are clean and may be used to pack away small woolen articles of wearing apparel in summer. A clean muffier put in a clean bag with the end

closely folded and tied needs no moth ball within to protect it from insects. A plate of raw meat or other food may he temporarily protected from dust or files by putting it in a large paper bag and folding the end of the bag under the plate. This is quite a different thing from putting meat away with the juices soaking into the paper in which it came from the market. A paper bag will protect the hand while blacking a stove, or temporarily in any similar unclean occupation. Solled bags even may do good service

again. Cut off the top third and lay this double strip of paper inside the bag, making a stronger base. Such a bag on the kitchen table or shelf to catch eggshells and bits of refuse helps keep the kitchen tidy.

The largest bags, cut off in the same way, may be set in the garbage can and save considerable scrubbing. In like fashion the waste-paper basket may be lined and its contents thus quickly and tidily transferred to the waste barrel or the fireplace. Again, shavings or excelsior for kindling a fire may be put in paper bags and thus save much clutter around an open grate in a guest chamber. One who has never tried it will be surprised to find that a paper bag will not break under a considerable weight of hard coal. Bags thus filled and piled carefully in a hod or, basket may be used to replenish a coal fire in a sickroom or where a baby is sleeping or when soiled hands would be undesirable. Much of the paper which comes into our houses around packages is suitable. for similar purposes again, and there should be a definite place for it. The passage of a hot iron over the surface of such sheets of paper not only removes folds and wrinkles, but would be sufficient to destroy any "germs" with which it might have come in contact.

Newspapers have many uses. A hook by the cookstove should be kept filled with pieces of newspaper, cut in the lines in which they are usually folded. about a square foot in surface. Noth-

ing is better to wipe off spatters of grease and keep the range in good condition, without much blacking. When the ashpan must be emptied or any similar work done, a double layer of newspaper underneath will save much brushing or scrubbing.

Where it is desirable to keep ice outside a refrigerator for a picnic, or for the top of a packed ice cream freezer, newspaper is a more effectual nonconductor than burlap or old carpet. But it is rarely wise to wrap the block of ice in the refrigerator.

Several layers of newspapers or heavy wrapping paper, spread between wire springs and mattress, will be almost as effectual as another mattress in preventing the discomfort of cold from below, which no number of blankets above will prevent. Where the blankets are limited, paper also is of service. Many a suburbanite has found protection from a cold wave by folding a section of the daily paper under the thin coat which seemed sufficient earlier in the day. Several folds of newspaper, with a loop of string in the center, will serve as a coathanger, where a better one

is not at hand. The family taking several dally papers, or even a single one, will require little other kindling for an open fire. Indeed,

ful; paper tablecloths have their place, and paper towels and handkerchlefs make us wonder why we have not had them long ago. Paper sheets and pil-

all sorts are especially useful.

Reduction of dishwashing and economy in laundry bills are certainly permissible in the vacation season, if not in more formal life.

Conservative guests at high-priced hotels and restaurants doubtless would resent the introduction of the paper napkins, but in places of lower grade it would be as much to be preferred to the damp half-clean napkins so often provided as the paper cup to the common drinking cup in railway stations. A roll of firm brown paper established in the kitchen as in the grocery, or sheets of fresh paper on a convenient hook, will fully justify the cost. Far better to have paper on which to cut up a fish or fowl than on a board or table, which must be washed. The offal rolled in the paper, after the work is done, does not attract flies and is easily disposed of, whether in fire or garbage pail.

Cheese, onlon . or parsley may be chopped on paper and thus save scrubbing. Crumbs may be rolled or bread dough kneaded. Oysters and scallops may be crumbed for frying by gently shaking a paper of crumbs on which the articles have been dropped after dipping them in beaten egg.

A softer grade of brown or cheap white paper should be chosen on which to drain fried foods. Another use for paper is to remove a film of grease from the top of broths for an invalid or soup for the family table. For this purpose the paper should not be glazed.

# CUSTOM AND SLAVES

RE you doing things in the home as you always have been doing them? A Has custom made you a slave without your another the far from from the rigid rule of things, especially if that rule be far from Has custom made you a slave without your knowledge? Break away beneficial. Don't be a slave to the wrong thing.

The slaves of custom and established mode. With packhorse constancy we keep the road,

should be a warning in the case of the housekeeper.

This page is a happy medium of exploitation of the new, tried and true ideas that help the homekeeper. Are you a regular reader? The People's Institute is too good and too important to miss. Next week will be a special page filled with ideas for Thanksgiving. Do not let the opportunity to improve the day be ignored.

We are proud of the names that are identified with this page. Here they are:

## The First Solid Food for Baby

W HEN my daughter Elisabeth was ner and an egg for breakfast. As she did time to give her solid food, and then discovered that my friends had very vague ideas of their methods of giving their babies this form of nourishment; and even my good doctor did not give me any definite rules. As my experimenting may help some

cereal instead of her bottle for one

not like sweet potatoes, which are very good for bables, she ate Irish potatoes. I have never fed Elisabeth any fresh fruits except oranges and grapefruit juice and apple sauce, which she loves. I prepare the orange juice with a lemon squeezer.

Elisabeth had five feedings a day until slie was a year and a half old, and then four-a lunch in the morning and three regular meals-until she was two years old, and since then only three regular meals, without any lunching except all the water and milk that she wishes. Of course, babies' stomaobs differ and every mother has to experiment more or less, but I hope that my experience may help some one who is facing A MOTHER. this problem.

inexperienced mother, I am going to tell my story. I began by giving her a

hanna N. NCE the human race made its tools of the most durable materials, but it has gradually found that even flimsy paper is suitable for many purposes. The furore

for paper-bag cookery made us realize that this is indeed the paper age. Forests are being transformed into this substance, as perishable as the leaves of the trees. Without its books,

magazines and the daily papers would be impossible. Moreover, it facilitates communication between producers, tradesmen and consumers, and shortens the housewlfe's hours of labor.

For the future we are promised paper parasols, hats and stockings, paper carpets, rugs and curtains, paper car wheels, and even rails for cars to run on, paper horseshoes, and paper coffins. Some day paper may be made waterproof as well 'as airtight.

As the forests diminish, paper may be made from many waste vegetable fibers, such as cotton hulls. Linen and cotton subjected to chemical processes renew their life of service as clean fresh

the pan, at a safe distance from the gradually rising surface of the cake. Greased paper often has been used to protect a fowl or joint of meat while cooking in the oven, especially ends of bones, which might burn before the meat was done.

in paper

Paper-bag cookery has one great virtue, that of saving the washing of some unpleasant dishes, such as the roasting pan and rack, or the tin sheet on which a fish has been baked. This method is most desirable where gentle heat only is required and where juices and delicate flavors too often are lost. In emergencies almost anything available may be used for any purpose; but there are better ways to cook a cream soup or custari than directly in a paper bag. . As with every other appliance, some practice is needed to learn how to use these bags in the best way. The handbooks by ML Soyer, grandson of the chef famous in the mid-Victorian period, and by C. H. Senn, an English authority on cookery, will be helpful to any one wishing to cook in paper bags. There are still other uses for paper

clothing from dust and from moths, if a strip of paper is pasted over the crack between box and cover, after all is solidly packed within.

one better than paper-bag cookery.

twisted newspapers.

When the hats and dresses come from their makers they are protected by many sheets of soft tissue paper. These may be smoothed out to use in similar fashion again. Even if torn, such paper should be saved for cleaning windows, mirrors or other glass surfaces. Laundry and other cleansing processes owe much to paper. The paper pulp pails and tubs are far lighter than wooden ones, and have some advantages over those made of metal. A hot iron and blotting paper will draw out grease spots from upholstered furniture or rugs not easily washed. Bits of moist paper thrown over rugs or carpets or even bare floors are excellent dust catchers, where sweeping must be done with an ordinary broom.

So much for the paper as a byproduct which finds its way into our houses. There are some types of paper which we do well to purchase.

be fitted into the neck of a bottle. A wad of paper will serve as a trivet under a glass jar of beef tea in a kettle of water.

A layer of tissue paper over a mustard plaster prevents too close contact with the skin.

Where frosting tubes are not available for the decoration of cakes a sheet of strong, pliable note paper may be made to serve as both bag and tube.

The decorative possibilities of paper of many kinds are so frequently exploited that they scarcely need reference here. Shelf papers are useful where boards are rough, but should be plain rather than ornamented, and need not hang over the edge. Dollies of paper are rightly superseding the napkins once used under cooked foods. The chop ruffles and souffle cases may be made by hand if others are beyond reach.

Whenever paper may be used to secure greater comfort or to save unnecessary labor let us not be hampered by traditional preferences for other ma-

feeding, either the third or fourth, so as not to have any gas, that might be caused by it, disturb either her nap or sleep at night. I alternated oatmeal gruel and a cream cereal. I could notuse rice, as my daughter has always had a tendency toward constipation. 1 cooked two cups of oat cereal with two cups of boiling water, in which I had placed a little salt, in a double boiler for three hours, then I strained it through a coarse wire strainer, and I had enough for two feedings. In cool weather it can be kept in a refrigerator overnight. I used the rest of the oatmeal for the family table.

The wheat cereal I cooked according to the directions on the box for breakfast porridge, for three hours, and added the yolks of two eggs, which I had boiled for the same length of time in the lower part of the boller. Be careful not to use any of the white, which is very tough. I mashed the yolks into the cereal while it was warm. After a few weeks I gave her two feedings of cereal a day, also graham crackers and zwel-bach. When she was fifteen months bach. When she was fifteen months old she had a baked potato for her din-

## Gingerbread Recipe

F OUR tablespoons butter, 1/2 cup of cup sour milk, % cup of flour, 2 teaspoons of ginger, 1 teaspoon cinnamon and 1 teaspoon soda. Cream the butter with a wooden spoon until thoroughly softened. Add sugar, then unbeaten egg and molasses; beat until foamy; sift the flour once before measuring, then again with the soda, ginger and cinnamon. Add the dry ingredients alternately with the sour milk to the first mixture. Give tha whole mixture a quick vigorous bent-ing. Butter a cake pan, dredge with flour and shake out, so that only a film of flour clings to the butter. Pour in the cake batter, bread evenly and in the cake batter, spread evenly bake in a moderate oven about thirty minutes.

This devartment will be in charge of a different instructor every month. The plan will give the housewife the benefit of wide and varied experience, and will present topics of interest to all.

#### By Margaret J. Mitchell Bruce School, New York.

THE question of what utensil to use in cooking is one which takes some experience, if the dishwashing is not to be too burdensome. A skillful cook will measure materials in such order that the same measure can be used for making several measurements, while the novice will measure a cupful of milk the first thing, if it happens to catch her eye first in the list of ingredlents, or if she happens to go to the ice box and sees it first ... Flour and sugar cannot easily be measured in the cup after the milk, but if she had measured the dry things first, moist, sticky materials could then be put into the same cup. Just so with measuring by spoonfuls, a little forethought will save work. But besides this it is convenient to know that milk does not stick badly to aluminum, so that cocoa, chocolate, custards, etc., are best made in an aluminum utensil. Fruit also does not stick badly to aluminum, and it is invaluable for a preserving kettle. The initial cost of aluminum should not frighten any one whose utensils are going to receive ordinarily good care, for it will outlast many other saucepans. It is not so valuable for frying pans, griddles and waffle irons, for it is ex-ceedingly difficult to clean grease from it on account of the injury done to it by strong soaps and alkalis.

Drop Biscult Nut Cake Kidney Stew Wash 2 beef kidneys and cut them in

halves lengthwise. Soak in cold water to cover them. Change the water after an hour, and let them soak another hour or more. Drain them and add bolling water to barely cover them. Add 16 teaspoonful of salt. Bring this to a boil and cook it in the fireless cooker for four or five hours. Bring it again to a boil and replace it in the fifeless for ten er more hours (overnight). In the morning remove the membranes and slice the kidneys. Thicken a cupful of the liquor

in the pan with 3 tablespoonfuls of bottom up over this. Serve immediately on a hot platter, surrounding it with flour mixed to a paste with an equalamount of cold water, Add about 1/4/ teaspoonful salt and a good dash of

Wash green sweet peppers and cut them in fourths lengthwise. Remove the stem parts and the seeds. Fry them in 1 tablespoonful of olive oll for each 4 or 5 peppers, over a moderate fire, so that they will brown a little in about twenty minutes to half an hour. Turn them once, to fry both sides, and serve them neatly arranged around a mound of steamed rice or on a hot platter.

#### Steamed Cup Custards

Heat 1 quart of milk until it steams. Meanwhile beat 4 eggs, add 1/2 cupful of sugar and 1/2 teaspoonful of vanilla. Stir in, slowly, the hot milk. Strain the mixture into a pitcher and pour it into cups. Set these in a steamer. Cover the steamer with cheesecloth and then with its own cover. Put it over gently bolling water and allow it to cook for ten minutes or more. Test when the custards are done by shaking the steamer a little, to see if the custards are no longer liquid. As soon as they are barely set, lift off the steamer, remove the cups and serve ice cold, little nutmeg grated over the top before serving improves them.

#### Cocoanut Cake

Steamed Rice in the Fireless Cooker Soak % cupful of desiccated cocoanut Wash 1 cupful of Carolina rice in a for 1/2 hour in % cupful of milk. Melt 1/4 cupful of butter until soft, but not liquid; add 1 cupful of sugar. Mix together 1 2-3 cupfuls of flour and 2% teaspoonfuls of baking powder, and add this to the butter and sugar, alternating with the cocoanut and milk. Beat it. Let it cook one hour. It will not be the whites of 2 eggs stiff and add them injured by two or three, but is best at and ¼ teaspoonful of almond extract the end of the hour. When all ready to last. Bake in a greased tin, in a modcrate oven, for about three-quarters of an hour. Cover when cold with a bolled

frosting, flavored with 1/4 teaspoonful of almond extract.

#### Corned Beef

The fireless cooker is specially good for making tough cuts of meat tender without their becoming stringy. Corned beef may be a delicacy if properly corned and cooked. Order a large piece (8 or 10 pounds) of the rump corned for only four days. Put it on with several quarts of cold water and let it come to a boll, then let it simmer for a half hour before putting it into the fireless cooker for ten hours. Bring it to a boil just before serving. If not cooked in the fireless, let it simmer several hours, until tender, keeping plenty of water around it.

#### Cream Puffs

Heat together 1 cupful of water and 1/2 cupful of butter until they boil. Add 11/2 cupfuls of pastry flour all at once and beat it until smooth; let it cook five minutes, stirring it all the time. When cool, add 5 eggs, one at a time, stirring the unbeaten egg into the dough until it is smoothly blended before adding another Place a rounding tablespoonful of dough on a greased tin, shaping it slightly to make it round, or dragging it between two knife blades into a long shape if for eclairs. Bake them in a moderate oven for about twenty-five minutes. Cool and fill with cream filling. Eclairs should be frosted

#### on top. Cream Filling

Put 2 cupfuls of milk to scald in a double boiler. Mix 1/2 cupful of flour, % cupful of sugar and % teaspoonful of ealt well together, and add the bot milk, stirring out all the lumps. Return it to the fire and let it cook for ten minutes, then stir in 114 tes- 1 be spoonfuls of butter and 2 eggs, besten with yolks and whites are mixed. Let this cook for about three minuter, stir-

ring constantly. Cool and add the vanilla.

To fill the puffs use a pastry bag and tube, making a small hole for the tube. or make a cut in the side and insert the filling by teaspoonfuls.

Lemon Pie

Mix well % cupful of flour and 1% cupfuls granulated sugar and stir in 11/2 cupfuls of boiling water. Let these cook in a double boller for twenty minutes, stirring occasionally. Mix 31/2 tablespoonfuls of lemon juice, the rind of 15 lemons and the yolks of 2 eggs and stir the hot mixture slowly into this, return it to the double boiler and cook until the eggs have thickened a little, then add 2 tablespoonfuls of butter, Cool the filling a little and put it into a baked crust. Make a meringue of the whites of the eggs and 1-3 cupful of powdered sugar. Spread on the top and bake in a very hot oven till light brown.

#### Pastry for Pies One Large Crust.

Mix together 1 scant cupful of flour, 1/4 teaspoonful salt, 1/4 teaspoonful of baking powder and work in with the tips of the fingers 1-3 cupful of lard. If the crust is to be used for custard ple or any other delicate flavor, half land and half butter may be needed to provent a slight to te of the lard, but for fruit ples a governord will not taste. Cut in with a kuife enough cold water to make a dough that is not crumbly. Pot it out on a floured board, molding it it out on a floured board, molding it lightly with the hands into a ball. Roll it without much pressure, keeping it in good round shape. Fold it in quarters when ready to lift it on its the ple plate to prevent it from breaking. Be careful not to stretch it over the plate: frim the edges that overhang the ple plate. It to be used for a baked crust, plane if on the outside of the plate and prick it is arrived places, putling the ple plate in the oven upside down. A performed plate plate is best for making play.
