livery and transfer business.

for black rot in apples? How does it make its appearance, and how detected? Is it very prevalent in the orchards of this section of country? have a neighbor that has had it in his apples in his yard so badly that they were worthless until this year and now they are clear of it. He claims to have treated his trees with something and cured it in them. Anyway he and his wife both say their

FULLEST RECOGNITION apples are first class for the first time since they became infected. He proposes to demonstrate it free for a

few to show what he has. J. E. A. Apple fruit black rot occurs over a large part of the apple growing fruit area of the United States. Disease affects limbs and fruit of apple, pear and quince. Large limbs blacken, and bark roughens and splits, disclosing

wood and causing a very rough, ugly looking canker by the fact that in the canker the bark does not split away and disclose wood beneath. Following is the usual treatment, although your neighbor may have discovered something better: Remove and destroy the affected limbs; cut out diseased

bark, and paint over all wounds with Bordeaux wash. When spraying in regular orchard treatment, see that the limbs are well covered with the spray.
