

BENSON TECH TO BECOME FACTOR IN SHIPBUILDING

Tentative Plans for Inauguration of Special Course Discussed at Meeting of School Board.

SIGNAL COURSE IS WANTED

Government Request Will Be Granted; Junior Red Cross Auxiliary Will Be Established.

The Benson Polytechnic School for Boys will soon become a real factor in the shipbuilding industry of the Columbia river district as shown at the Portland regular meeting of the board of education, when tentative plans for the inauguration of a special course at the school were discussed. Owners of some of the shipyards have expressed a willingness to cooperate with the Benson school in the manufacture of certain parts and fittings, such as pins and sheet bending. With a comparatively small initial outlay the school can be equipped with the facilities needed in the work, it was explained by Superintendent Alderman.

Efforts also are being made to have the United States government lend its moral support to the undertaking and it is expected that conscripted men engaged in the school shipbuilding work will be exempted from military duty.

Will Establish Signal Course.

At the recent meeting the government authorities signal course will also be established for the benefit of students.

Approval of the plan to organize a junior Red Cross auxiliary among the pupils of the city schools was given by the board. Superintendent Alderman explained that the organization had been successfully promoted in many of the public schools of the United States.

Request of A. L. Mills, president of the Oregon Association for the Prevention of Tuberculosis, for an appropriation of \$50,000 for the erection of a new school building on the old Mount Tabor school ground at East Sixteenth and East Stark streets, was re-ferred.

Contract for the construction of the second unit of the Kennedy school was awarded to Tranchini & Paulus, whose bid for \$95,000 was the lowest submitted.

Request Is Denied.

Request from residents of the Terwilliger district for the use of the sewing-room of the school there for war work was denied.

Committed recommendation that the board consider the readoption of ten books in the elementary subjects of music, writing, spelling and language, and the high school subjects of general science, United States history and pedagogy, and that publishers be notified "it would be open on March 1 next," was rejected. Action will be taken until the district attorney renders an opinion on the proposal.

The request for additional playground for Woodmere school was re-ferred.

McClure Complaint Referred.

Complaint of E. L. McClure against J. C. Veatch, principal of the Lincoln high school, was referred to the educational affairs committee. McClure had been suspended from attendance at the night sessions. He stated to the board that "reflections had been cast on his character which were not warranted." Principal Veatch filed a counter-complaint.

Hilma E. Anderson of the Glenhaven school was granted a continuance of her leave of absence for the remainder of the school year, in order that she may have her work at the University of Washington.

Mrs. Margaret Walker-Dexter of the military department of the Benson school for girls was granted permission to resign.

Teacher Is Married.

B. E. Hughes of the Holladay school reported that Bess Hockett was married November 28; her name now being Mrs. Bert H. Skoe.

Mildred E. Kruse, a teacher of the Clinton Kelly school, was granted leave of absence from the Christmas holidays until the end of the school year to study at the University of Washington.

Tabor school, teacher at the Mount Tabor school, was given leave of absence because of illness.

Newberg Banquets Fire Chief.

Newberg, Or., Dec. 7.—The Newberg fire department enjoyed a banquet Wednesday evening in honor of Chief Arthur Bascom, who is leaving town.

Speakers included Mayor Larkin, City Attorney Chapin, Ex-chief Bascom and Chief Smith. About 20 members were present.

Santiscope Gives Skin Comfort.

When Angeline Nida, Russian, went to the Union Station this morning to claim her two trunks Patrolman C. E. Stanton found her with a search warrant and the trunks were full of whiskey and several quarts of wine.

The woman and trunks were taken to the police station, where it was found she did not understand English. A Russian interpreter was sent for.

TUBERCULIN TEST RESULTS CUT BY POLICY OF MANN

Removal of Veterinarian and the Substitution of Untrained Man Is Given as the Cause.

SALARY REMAINS THE SAME

Detection of Diseased Cows Fast Enough to Protect the Consumers Is Now Impossible.

Small Savings Essential.

Mr. Wonacott declares that the government holds equally important the imperative need, forced on the people by world war emergency, to save in every possible way, and to put the small as well as larger amounts in savings certificates.

Mr. Wonacott will devote his time to the important task. The directors of the Y. M. C. A. have agreed to release him from his present duties and Harry W. Stone, general secretary of the Portland association, who is now in New York, this morning, telegraphed his consent.

Is Efficient Organization.

Mr. Wonacott has for a number of years directed much of the administrative work of the Portland Y. M. C. A. and his withdrawal from temporary office involved heavy sacrifices on the part of the officers and general secretary of the association. His ability in organization and administration was demonstrated by the recent Red Cross and Y. M. C. A. fund-raising campaign, which was better qualified than almost any other man in Oregon to become associate director of the big government thrift campaign in the state.

The headquarters offices of the campaign are on the third floor of The Journal Building.

Portland Is Second As Big Wool Center

"Home Products Week" calls attention to fact that small amount of wool is used in Oregon factories.

"Home Products Week," which ends Saturday evening, has resulted in calling attention to the relatively small amount of Oregon wool which is manufactured before shipping it to other points. Portland is the second wool concentrating point in the United States.

"Oregon's wool clip was estimated at 20,000,000 pounds last year," commented A. G. Clark, manager of the Home Industry League.

On today's market it would represent a value of from \$12,000,000 to \$14,000,000.

In normal times most of our wool is shipped clear across the country and our purchases of fabric are largely made from the product of mills whose factories are thousands of miles distant.

Tests About Cut in Half

Two veterinarian with the intra-dermal method can test about 1000 cows a day, while one with the old method can test only 1000 a day.

The change in method of testing is from the "old method" to the "newer method." With the organization as it was before Dr. Miller was deposed, it is declared that tests could be made with sufficient rapidity to weed out diseased cows and protect consumers, particularly in areas where the young and aged, who are most endangered, from the infected ranks of these animals.

The milk of about 8000 cows is delivered raw (not pasteurized or sterilized) in the city, according to records in the city office. When a small proportion of reactors are found, it is possible, if possible, to make tests twice a year. Where large numbers are detected, tests should be repeated more often.

Records of Tests Made.

The records of the city hall show that at present, with the new method, one man with the untrained assistant who draws the salary of a qualified veterinarian, is testing about the same number of cows as the veterinarians did under the old method, about half as many and should be tested.

The first three months of this year tests were made under the sub-cutaneous method; the last three months

by the intra-dermal method. The results follow:

Month	Month	Number Tested	Number of cows
January	January	28	477
February	February	26	524
March	March	72	1566
September	September	82	265
October	October	82	215
November	November	202	1618

Dairymen Pay Expenses

In November, the chief inspector made part of the tests.

Under this new method, the dairymen paid until recently seven cents a head for the service, and now pay 10 cents until the test is completed, as no charge was made. There is no legal authority to charge the dairymen anything, but they consent to the fee because under the new method it is not necessary to keep the cows in the barn until the test is completed, as was necessary under the old method.

Dr. Mack bought the first amount of intradermal tuberculin himself and was reimbursed by the dairymen. The government furnishes free the sub-cutaneous tuberculin, but, although the state has recognized the intra-dermal method, the government has not and does not supply tuberculin for it.

FREDERICK TOWNSEND, MANY YEARS HEAD OF PORTLAND BANK, DIES

Aged Financier Had Lived in This City Almost Half Century; Body Lying in State.

Frederick Townsend died at his home, 21 East Thirty-ninth street, Thursday in his eighty-sixth year. He was a native of England and had resided in Portland for 45 years.

Mr. Townsend was an active member of St. Marks Episcopal church for many years and took great interest in the Humanitarians and the British Benevolent society.

For over 25 years he was head in Portland of the Bank of British Colum-

bia.

Mr. Townsend is survived by his widow, Mrs. Jane E. Townsend, and by his son, Robert Townsend of the R. L. & Co. The funeral will be held at St. Marks church, Marshall at North Twenty-first street, at 11 a. m. Saturday, and burial will be in Riverview cemetery. The body will lie in state at the Holman chapel, Third at Salmon street, until 10 a. m. Saturday.

John R. Simons

John R. Simons, 72, died in Portland Wednesday, was 33 years of age and a prominent member of the Independent Order of Odd Fellows in Henniker a few years ago. Mr. Simons has a son, Bert Simons, at La Center, Wash., and a daughter, Mrs. H. M. Kirk, Waterman, Or. The body will be sent to Henniker for burial.

Oscar Crawford Glass

Oscar Crawford Glass died this morning at the odd Samarian Hospital, at the age of 55 years. He was a native of Canada and had resided in Oregon for 38 years. Mr. Glass is survived by a brother, Graham Glass of 211 Vista avenue, Portland, who will be held at the J. P. Finley church, Fifth at Montgomery street, Saturday, at 11 a. m. Rev. A. A. Morrison officiating. Burial will be in Riverview cemetery.

John McGrath

John McGrath, aged 66, died while

at present, with the new method, one man with the untrained assistant who draws the salary of a qualified veterinarian, is testing about the same number of cows as the veterinarians did under the old method, about half as many and should be tested.

The first three months of this year tests were made under the sub-cutaneous method; the last three months

tests about cut in half.

Two veterinarians with the intra-dermal method can test about 1000 cows a day, while one with the old method can test only 1000 a day.
