### Wheat Is Feared By the Government

(By United News.)
Washington, April 19.—A world wide wheat
shertage during 1920 and an increased world
demand for wheat are indicated in reports to the department of agriculture. the department of agriculture.

At a result wheat and bread prices in the United States are expected to remain high during the next year. The American crop, according to department estimates, will be the smallest in several years, which with a heavy export demand will be the two important factors in keeping up prices. latest news from Russia reaching the depertment shows conditions there are still in a chaotic state, and that light is to be expected in exports of wheat and other grains from there for some time to come. Before the war, continental Europe relied to a great extent on Russian supplies.
