Sales Also Subnormal, Rail Sales Making Up 25 Per Cent of Total Mill Product.

Lumber production at mills of the West Coast Lumber association in Western Oregon and Western Washington, for the week ending November 6, was 66,929,693 feet, or 20 per cent under normal, according to the weekly bulletin of the association.

The volume of sales was heavily under normal, due to restricted buying in competitive territory east of the Mississippi river. Of the total 54,019,309 feet disposed of by the mills, a large portion was sold at less than cost of production, according to the report.

Railroad purchasing, which has been active since the decline in prices, represented 25 per cent of the sales of the week. California continued fairly active in both rail and water business, with indications, however, that California requirements soon will be satisfied.

Shipment of lumber for the week amounted to 50,386,719 feet, including both rail and water movement. The unshipped balance of orders for rail delivery on the books of the mills, including railroad business, is 3381 cars. In domestic cargo trade the unshipped balance is 116,110,051 feet, in export trade, 23,023,944 feet.
