

EFFICIENT MARKETING

FARMERS MUST
COMBINE TO GET
BETTER RETURNS

By R. C. Newhart
It was brought to the writer's attention some time ago that while in California the market for farm appliances and conveniences was good, yet here in Oregon, for no apparent reason, there was little or no sale for the same articles.

Since the conditions of agriculture and the classes of people living in the two states are so nearly equal, there was no reason apparent at first for the difference between the markets of the two states. The difference could only be laid to one thing and that was a greater surplus of ready cash upon the part of the California agriculturist.

Production in our sister state does not seem to have reached a much greater degree of efficiency than our own, nor is production more economical as a whole. The only reason for more ready cash on the part of the California farmer seems to the writer to be the greater returns which they receive when they market their crops. Here a vital difference can be seen.

THEY WORK TOGETHER

In our sister state on the south a system of marketing has been under the process of development for the last 15 or more years. In fact the idea was conceived there even earlier than that, but has been more successfully applied during the last few years. Immediate results cannot be taken as an indication of the value of an idea. It takes time to put anything upon a truly successful basis. But time will prove the value of a system, just as surely as it will condemn it. Cooperative marketing has proven a success after being thoroughly tried out for a few years wherein they were given every chance to succeed.

FAILURE REVEALED

The failure of the old system of marketing to bring maximum returns to the grower was not generally felt until post war conditions made the situation so acute that either a change or reform was demanded in the face. This has crystallized feeling so strongly that it has been possible for the growers of several commodities to band together and cooperative marketing has received a great impetus all over the country. There are, however, a great many growers who are not as yet in a marketing association. The failure of some of the growers of certain commodities to organize does not lie in a feeling against cooperation, but rather to conditions such as great distances between growers, no leadership, and the fact that due to unusual conditions, the recent price decline has not hit them so hard as it has others.

In California all of the major farm crops are sold through cooperative marketing agencies with the results that the producers are receiving more for their produce and at the same time the ultimate consumer is paying less. In many cases less than they would if the farm products reached them through the old hit and miss marketing system. The California farmers have more ready cash and are buying more home conveniences and articles needed about the farm.

GIVE IT A TRIAL

Cooperation is still in its infancy in Oregon and as yet has not had a chance to show its true value. Growers cannot come until all of the farmers are receiving a greater share of what the consumer pays for farm produce. They will never receive more for what they produce until they have control over it, until it reaches the last transaction through which it must pass.

Is there any better argument for cooperation than a comparison of the conditions which exist in a state which has had cooperation for many years and one that is just in the infancy of collective marketing of farm commodities?

Stanfield Attending
Livestock Meeting

Washington, Aug. 20.—(WASHINGTON BUREAU OF THE JOURNAL)—Senator Stanfield has left Washington for Chicago in company with W. L. Thompson, vice president of the First National bank of Portland, who accompanied the senator back to Washington a day or so ago following an earlier conference in Chicago on the livestock pool.

OREGON COWS LEAD
A report from the Salt Lake City office of the United States dairy division for June shows that Oregon leads all states in the West in average production of butterfat per cow, also in greatest percentage of cows giving above pounds of fat and in having the highest producing herds, that of C. Kinnaman of the Tillamook association showing 61.41 pounds of fat per cow.

SILLO TIME NEARLY HERE
Silo filling time is nearly here. Ensilage should be finely cut and carefully packed. A full silo means cheaper feed, healthier cows and larger milk checks.

PREPARED BY
CLARKE, WOODWARD DRUG CO.
PORTLAND, OREGON

PRODUCE HERD IN LIFETIME

"Financial King's Interest" and her twentieth calf. She is now 21 years old.

JERSEY IS MOTHER
OF TWENTY CALVES

Twenty calves at 21 years of age is the breeding record of Financial King's Interest, a Jersey cow owned by Greystone farms at West Chester, Pa. The last calf is a heifer, and is one of 19 sisters, the other calf being a bull. This grand old cow has therefore been the mother of a fair-sized herd, and is still in a remarkably good state of health.

At 20 years of age she made an official record of 7302 pounds of milk and 400 pounds butterfat, and she has 4 previous records that were still higher. She will be put on test again to test the value of a cow at advanced age, and also as an object lesson of what can be made from a cow whose years are so prolific in dairy products and calves.

Her last calf was sired by Financial Sensation, a grandson of the old cow, so that the calf is as close to being the counterpart of its mother as is possible. Financial King's Interest is the only living daughter of Financial King, which was also the sire of Financial Countess, one-time champion production cow of the Jersey breed. Financial King was a son of Interest, a cow that in her time was considered the best animal on the island of Jersey. It is interesting to note that this great line of animals is being intensified as well as perpetuated by the owners of the cow that has 20 calves to her credit.

Independence Cow
Gives 20 Pounds of
Fat Above Record

Latest reports state that a registered Jersey, Mrs. May's Lady, a senior yearling owned by Harry Hilt of Independence, has just completed a record with more than 20 pounds of butterfat to spare above the present world's record for that age over all breeds, a record which is already held by an Oregon cow. A remarkable feature of her test is the fact that she showed an increase in production each month over the one before except in the months of February and July. She finished a year's work still producing better than 20 pounds of butterfat per day. It is understood that if nothing goes wrong this wonder cow will also qualify for class AA.

Clackamas County
Pig Club to Enter
\$400 Prize Contest

Oregon City, Aug. 20.—Members of the pig clubs of Clackamas county will enter their stock in competition for the \$400 prize offered by the Union Stock yards of Portland for exhibits at the Pacific International Livestock show this year. The Union Stock yards are offering the prizes with a view to encouraging the boys and girls engaged in club work, and to demonstrate the relative gain in weight with feeding and aid them in computation of scientific costs.

Five prizes, ranging from \$40 to \$15, are offered to each of three districts: Clackamas, Columbia, Clatsop, Tillamook, Washington and Multnomah are included in the first district.

Fair at Woodland
Attracts Exhibitors

Woodland, Wash., Aug. 20.—The Cow-Itz county fair to be held at Woodland, September 29 and 30 and October 1 promises to be of exceptional interest. This is the second year of the fair under county management, and it is expected to be one of the most successful. Exhibitors are offered to exhibitors by way of good premiums and greatly improved accommodations. Better arrangements for displaying and housing of livestock and greatly to the attractiveness of the fair. Three of the local granges have signified their willingness to exhibit agricultural and horticultural products. The second day of the fair will be known as "Grangers' day." A parade of grangers is proposed for 10 o'clock on that day.

FAIR DISPLAY ARRANGED
Pasco, Wash., Aug. 20.—At the regular luncheon meeting of the chamber of commerce it was decided to finance a display of agricultural products at the Spokane exposition fair, the farmers to furnish and collect the displays.

SOIL TO BE ANALYZED
Eugene, Aug. 20.—The Eugene Chamber of Commerce will have a booth devoted to the analysis of soils at the Lane county fair next fall. Farmers will be able to bring in samples for analysis by experts.

REN LAYS BANDED EGGS
Tiffin, Ohio, Aug. 20.—(I. N. S.)—A hen which lays banded eggs is a curiosity owned by S. O. Fletcher of Tiffin. The eggs are light brown in color, and encircling each is a white band about one half inch in width.

WILL ASSIST BERRY GROWERS
Chas. W. Adams, Jr., E. G. Wood, horticultural specialist of the state college extension service, is expected to visit Willapa valley from September 16 to 22, to assist berry growers.

Livestock advertising in Oregon Country Life pays. Write for livestock rates.—Adv.

GOAT OWNERS TO
FIGHT 'VARMINTS'

By Richard G. Scott
Secretary Oregon Mohair Goat Association
At a meeting of the sheep and goat men of Lincoln county at Harlan on August 4, a movement was started to clear out the predatory animals which promises to take in all of the counties. Lincoln county has been suffering severe losses among sheep and goats from coyotes, wildcats and bears. The assessor is reported to have said that the fact that have been reported 9000 goats killed by predatory animals in Lincoln county this year. As there are only about 6000 goats in the county, according to the 1920 census, it will be seen how serious the situation is. The writer was told of one bear which had 60 goats to his credit this year. From all through the coast country come reports that they cannot raise any young goats this year because of the loss of goats to the 'varmints' on the range and with it the farms are growing fewer in number and smaller in size. The brush is winning the battle against civilization in Lincoln county.

After hearing discouraging reports from many of the farmers as to the losses from 'varmints' and the fact that, owing to being unable to keep goats, the brush was growing up and the brush was winning the battle against civilization in Lincoln county. The facts were looked up in the 1920 census report. The number of farms decreased in the 10-year period from 961 to 167, or more than 80 per cent. The number of farms decreased from 158,000 to 118,000, or nearly 25 per cent.

The sheep and goat men assembled at Harlan decided to do what they could to make their country safe for livestock. They voted to revive the old Coyote Club, and recommended that bounties be paid on bear and wildcats as well as on coyotes.

Charles B. Arthur, president, and L. G. Grant, secretary. There were over 50 in attendance, meeting in a grove near the schoolhouse. Attention was called to the fact that the 'varmints' had been cleared out before, but with a little laxity were now worse than ever, and doubt was expressed whether any permanent good could be accomplished until the whole country was freed from these destructive animals.

AID IS PLEDGED
The writer, who was present in the interest of more goats in Oregon, as part of the campaign being carried on by the Mohair goat association, assured the goatmen that this association was already dedicated to the work of destruction of predatory animals, and would undertake to enlist the support of all organizations for the good of a big and more prosperous Oregon. When it is considered that there are thousands of acres of land covered with brush and fern which are now a high explosive, it is more insensitive to shock or impact and to friction than the commercial explosives, but is slightly more sensitive to shock than TNT. It is difficult to ignite, but will burn in small quantities without exploding. Theoretically, picric acid in the presence of certain metals will form dangerous compounds, but tests indicate that no danger will be involved in using it in soils containing lime or iron. It should not be exposed to fire or flame, and no metals should be allowed to come in contact with it. In ordinary handling, picric acid is not poisonous; it can be used in open-air, blasting without causing headache or other ill effects.

Picric acid has been prepared for distribution by dry and packing in double-tipped paraffined cartridges weighing six ounces. These cartridges are packed in wooden boxes each containing 100 pounds of the explosive. One of the cartridges is about equal in strength to an eight-ounce cartridge of the commercial dynamites used for agricultural blasting.

ORDER AT O. A. C.
Picric acid should be detonated with a No. 8 detonator or cap, and either a Gray Harbor junk woman, who are detonators, or the electric current may be used. Caps are placed in the cavities the same as in firing dynamite. These caps should be handled carefully. For storage and use, blasting, picric acid is used the same as dynamite, and the electrical method of firing will be needed in blasting ditches, because the acid is so insensitive it will not explode.

All individual orders for the acid should be placed with the agricultural college in the state, because the agricultural colleges have been selected to act as the agency.

GOATS THRIVE ON BRUSH
With the removal of the wild animals these mountains and hills will be populated with Angora goats and sheep, the goats eating the brush and fern, and clearing the way for the grass eating sheep and cattle. Goats thrive in this section. Oregon produces the finest goats grown anywhere. A new era of goat raising is being inaugurated in the mountains and the brush is being cleared away. The goats are being used for the purpose of clearing the brush and fern, and clearing the way for the grass eating sheep and cattle. Goats thrive in this section.
