PERFORMANCE PROVES SAVAGE TIRES Are BUILT TO EXCEL

IN DALLAS, TEXAS

Local road conditions render severe tests to tires operating in territories tributary to Dallas. This is especially true of tires in commercial service and in the oil fields where "tests" are made, more often than not, with no intention of making them as such. The "test" is in reality a part of the service tires must undergo in the course of regular duties performed.

Selected from our general office files of certified records showing the remarkably consistent service Savage Tires are giving in this and other territories, we find the following:

Unusual Service
Running a tire flat is considered the extreme of hard usage and abuse and generally necessitates an investment in a new tire. This is true in Dallas as well as anywhere else—and yet a local user tested the construction of the Savage Cord in this manner for a distance of fifty miles.

After this unusually severe test a critical inspection of the casing revealed a perfect bond between plies without a single loose cord. We attribute this in part to the *conservative construction* features we have put into the Savage Cord to make it the remarkable tire it is. Other tires "test-

ed" in the same manner, proved unfit for service.

Rough Usage
A service car owner and driver known as "the hardest driver in the Panhandle," from previous experience with many makes of tires, certifies to getting value received if his tires last 5000 miles. At this writing Savage Cords have increased that mileage by more than 100% and are still in operation with the appearance of being less than half worn.

In the Oil Fields
Operating on the gas lines and highways under heavily loaded cars hauling material to and from the oil fields, for a mileage of 17,500 miles, Savage tires have given greater service to certain operators in Northwestern Texas than any other make of tire used—and they claim to have tried them all.

In Taxicab Service
On a fleet of cars in this territory, undergoing the severest type of city, passenger service, Savage Cords are averaging better than 10,000 miles of highly satisfactory service. In comparison with the mileage previously secured from other tires this performance is justly considered remarkable.

Almost any tire will give satisfactory service under ideal conditions. Some makes will even render satisfactory service under certain adverse conditions. Certain makes of tires will perform best on long drives over pavements. Other makes will show to better advantage on dirt highways—and so it goes.

Our object has been to build Savage Tires to perform equally well under every condition—on the short haul of the heavily laden commercial car, on the heated roads of the sandy desert, over mud and stones of the land of forests or the broad dirt highways of the plains.

That we have accomplished our purpose is evidenced from the results users of Savage Tires are getting—everywhere.
