The Daughter of a Mormon Bishop  
Stolen by a Prize Fighter.

LOVE LAUGHS AT LOCKSMITHS.

An Agreement Which Was Mutually  
Agreeable to the Pair.

FRUITLESS CHASE BY THE PARENT.

What the Effect will be Upon the  
Church, from the Elopement.  
Is Not Stated.

SALT LAKE, Aug. 2.—Bishop Sneazly is still in pursuit of his daughter Ruth, and her abductor Slade, but as the couple are married it is not known what he can do about the elopement. Slade stole the girl because he loved her. Not long ago Slade, who is known as the Marion was imported because it was believed he was the only man who could whip John L. Sullivan. Slade was a fine bulky specimen of manhood, but he proved a dismal failure and was relegated, about three years ago, to Salt Lake. He is now hiding from Bishop John Sneazly, who ruled over a small agricultural town known as Mover, about 100 miles from Salt Lake. He is wealthy and his only child, a girl about 18 years old, was a recognized beauty. She had all the young members of the Mormon church within a circuit of 500 miles at her feet, but when the giant fighter, Slade, appeared in the town the two became desperately enamored. They eloped, but Slade had to first play Romeo to his Mormon Juliet because she was locked up in an upper chamber of her watchful parents' home. Bishop Sneazly learned of his daughter's love making before the elopement, and his temper rose to a high pitch. The union was denounced, and the girl was locked in her chamber, from which Slade stole her in the most approved and romantic style. They hastened to a justice of the peace 20 miles away and were married. The bishop and all his clan pursued the elopers, but they arrived at the house of the justice half an hour too late.

But the County is Bankrupted.  
Osborn Statesman. Such a vigorous skanking up as the Coeur d'Alenes is now receiving will prove of incalculable benefit. For years crime has been winked at in Shoshone county, and none dared protest for fear of the vengeance of that very element in our society which has shown its hand so effectively in the recent riots. Let the law be sternly enforced; the disease demands a cruel surgeon. After our county has been in the grasp of martial law for a time we may hope that a clear conception of what constitutes law and order, when properly administered, will be impressed upon the public mind. It is a novel experience.

Gladstone is Still Ill.  
London, Aug. 1.—Gladstone passed a good night. Sir Andrew Clarke, his physician, called upon him at noon today. To the associated press the physician stated that he was satisfied with his progress toward recovery, but that Gladstone was not yet entirely rid of his cold and must spend at least another day in his bedroom. He is permitted, however, to receive his colleagues on urgent business.

Noted Horseman Dead.  
SAN MATEO, Aug. 2.—Dick Tenbroeck, the noted horse man, was found dead in his bed yesterday at the Hermitage. He was over 80 years of age, and for years had been a confirmed invalid from the gout.

THE BERGFELD EXAMINATION.

Testimony of the Expert Chemist  
Search For Poison.

As THE CHRONICLE went to press yesterday afternoon testimony was being taken in Justice Schultz' court.

Capt. J. H. Fisk, testified. N. M. Eastwood called at my office in Portland July 14th and delivered to me a grain sack tied with heavy string and sealed with the stamp of the Pacific Express company on the seal, all in perfect condition, which he said contained part of the remains of Mrs. Rogers, and on which he requested a toxicological analysis. He also delivered to me a three ounce vial of embalming fluid, sealed, with the stamp of the Pacific Express Co. on the seal. Every seal was perfect and showed no tampering. After being sworn before a notary public to carefully analyze the contents of the jar, and giving him a

receipt for the same, the sack was opened, and inside a stone jar was found wrapped in a white cloth. The cover was sealed on with green sealing wax, with heavy strings around and over the cover, which were sealed and stamped as above stated. The jar was opened and the contents emptied into a large evaporating dish that had been washed with hydrant water. The jar was found to contain the stomach ligated at the pyloric opening, and left open at the cardiac end; all the intestinal tract, the liver, kidneys, spleen, and heart; also some bloody fluid that remained in the jar that had oozed out of the organs. The liver, kidneys, spleen and intestines were complete. The heart had a cut in it, which probably was done at the post mortem examination. The stomach was separated out and placed in a new clean platter that had been washed in distilled water. The stomach was opened, and was found comparatively empty, with the exception of a few pieces of meat, and some bloody fluid of a strong acid reaction, which was emptied into a clean glass jar and set aside.

The stomach was highly inflamed and covered with purple spots, especially at the cardiac opening. We closely examined the internal surface of the stomach with a magnifying glass, and found it coated with a crystalline substance, as though it had been sprinkled with salt, which appeared to have inflamed the lining of the stomach. We picked off eight of these crystals, washed them in distilled water, and then weighed them; they weighed 10-100 of a grain. We placed them between two watch crystals and set them aside for future examination; then washed the stomach with distilled water and emptied the washings into a glass jar containing the contents of the stomach. We then opened the intestines, and found them inflamed and in some places almost eaten through. About 18 inches below the commencement of the small intestines a medium sized gall stone was found.

Several sheets of detail testimony describing the analysis, are omitted for lack of space. The finding of zinc in the stomach is supported by the following proofs: First, that it gave a heavy white precipitate with ammonium sulphide, which is characteristic of zinc. Second, that the precipitate thrown down by ammonium sulphide, when collected on a filter dissolved in hot nitric acid; a trace of nitrate of cobalt added, (not enough to give it a pink color), and then carbonate of soda added in excess, and the fluid boiled a few minutes; a precipitate of the mixed carbonates of zinc and cobalt was formed; which, when collected on a filter, washed, and incinerated on platinum foil, and the residue dissolved in dilute hydrochloric acid, gave a bright green color, which is characteristic of zinc. Third, ammonia gave a white gelatinous precipitate, which was readily soluble in an excess of ammonia which is also characteristic of zinc. Fourth, ferrocyanide of potassium, added to a portion of the fluid, made alkaline by ammonia, gave a white precipitate of the ferrocyanide of zinc.

In our opinions these tests we consider conclusive and sufficient evidence of the presence of zinc—either in the form of a chloride of zinc, or sulphate of zinc (white vitriol), beyond the question of a doubt.

At the conclusion of Capt. Fisk's testimony Miss Dr. Hampton was called. Witness had assisted in the analysis. Her testimony was substantially the same as his. Both were subjected to rigid cross examination. The main facts adduced from the experts was to the effect that sufficient chloride of zinc was found to produce death.

Bert Rogers was recalled. Said he was not on good terms with the defendant; might have said that he had no suspicion concerning death of his mother until the arrival of his brother from California.

Mrs. Spicer, daughter of deceased, testified. Came to mother's funeral; nothing was told her concerning the embalming of body. Defendant said that it was not possible to keep the body, and he would take his children away if the body was kept in the house as it was not safe for the children to remain.

Court adjourned to 9 a. m.

**TO HAUL THE PEOPLE.**

The Problem of Transportation at the  
Chicago Fair.

A VERY IMPORTANT QUESTION

Which Visitors to Chicago Should Take  
Into Consideration.

PRACTICALLY NOTHING IS DOING.

When all the Facts Become Known a  
Great Many Will be Magoons  
or Stay at Home.

CHICAGO, Aug. 2.—A very important question confronting the world's fair management is the matter of the transportation of visitors to and from the grounds. It has been assumed that facilities for handling 150,000 people an hour would be no more than adequate to provide the attendants at the fair with the necessary accommodations for going to and returning from the grounds to the city without discomfort. The street cars will accommodate many, the elevated road will take care of many more and the boats on the lake will carry some. It would be a reasonable estimate to say that these three modes of conveyance could accommodate 50,000 persons an hour, leaving 100,000 an hour to depend on the railroads. Eight cars would be about the limit in size of these trains, although ten could be drawn. A car will seat about sixty passengers. But suppose each should carry eighty; this would make for a train of ten cars 800 passengers. It would take an hour and a half to make the round trip, and perhaps four minutes between trains. A simple calculation shows that to handle 100,000 passengers an hour under such conditions would require 1,500 cars. The cost of 1,500 cars at \$3,000 each and of 150 locomotives at \$7,000 would call for an outlay of \$4,500,000 for cars and \$1,050,000 for locomotives, or a total expenditure of \$5,550,000 for rolling stock alone.

A railroad official said the other day that he did not believe all the railroads in the city could, on three days' notice, lend to another road for a day's use twenty cars. When one considers the demand that will be made for cars on the roads in the transportation of their own passengers to and from Chicago it is not reasonable to suppose that they can furnish 1,500 for carrying passengers from the city to the world's fair grounds. Not long ago a committee of railway officials was asked to make a report upon this subject. The report declared that, leaving out the Illinois Central, all the railway companies in the city could not handle 60,000 passengers an hour without going to some millions of dollars' expense for rolling stock. But this is only one phase of the question. Terminal facilities at the world's fair adequate for the handling of 100,000 passengers an hour cannot be put in without much work, extending through several months. Yet practically nothing has been done. Any one who goes to Jackson park and attempts to come back when the work stops in the evening and the workmen start for home can understand what the difficulties will be when 20,000 or 40,000 people want to take the train at the same hour for the city, to say nothing of 100,000 people.

Balfour Accused of Bribery.

London, Aug. 1.—A petition has been granted against the return of Right Hon. James Balfour, first lord of the treasury and conservative leader in the house of commons, as a member of parliament for East Manchester, on the ground that his election was obtained by bribery and illegal voting by the wholesale treating of voting and hiring of vehicles to carry them to the polls. Balfour was declared elected by 5147 votes to 4749 for Professor K. F. C. Munro, liberal.
