Notice: Sale of City Lots.

Notice is hereby given, that by authority of Ordinance No. 225, which passed the Common Council of Dalles City, June 30th, 1892, entitled "An Ordinance entitled an Ordinance to provide for the sale of certain lots belonging to Dalles City," I will on Tuesday the 16th day of August, 1892, sell at public auction to the highest bidder, all of the following described lots and parts of lots situated in Gates Addition to Dalles City, to-wit:

Seventy feet off from the south side of Lot No. 1, Block 18; Seventy feet off from south side of Lot No. 2, Block No. 18; the south one-half of Lot No. 3, 4, 5 and 6, in Block No. 18; Lots Nos. 2, 3, 4, 5, 6, 7, 8, 9 and 10, in Block No. 19; and Lots Nos. 7, 8, 11 and 12, in Block No. 14.

The appraised value of said lots and parts of lots which they will not be sold is fixed as follows, to-wit:

70 feet off the south end of Lot No. 1, in Block No. 18. \$125.00

70 feet off the south end of Lot No. 2, in Block No. 18. 125.00

The south one-half of Lot No. 3, in Block No. 18. 100.00

The south one-half of Lot No. 4, in Block No. 18. 100.00

The south one-half of Lot No. 5, in Block No. 18. 100.00

The south one-half of Lot No. 6, in Block No. 18. 100.00

Lots numbered 2, 3, 4, 5, 6, 7, 8, 9 and 10, in Block No. 19, and Lots numbered 7, 8, 11 and 12, in Block No. 14, each appraised. 100.00

Each of said lots will be sold upon the lot, respectively, and none of them shall be sold for a less sum than the value as above stated.

One-third of the price bid on any of said lots shall be paid in cash at time of sale, one-third on or before one year from date of sale, and one-third on or before two years from date of sale; with interest at the rate of ten per cent per annum upon deferred payments, payable annually.

The sale will begin with the first lot herein above mentioned at ten o'clock a. m. August 16, 1892, and continue with each lot in the order as herein named until all of said lots shall be sold.

Dated this 14th day of July, 1892.

FRANK MENEFEE,
Recorder of Dalles City.

HORSES IN CHICAGO.

Sales Advancing Readily Both in Prices and Numbers.

LIMITED OFFERING IN THE SCALE.

Condition of the Cattle Market Much Improved Last Week.

RECEIPTS ARE BELOW ESTIMATES.

Cows And Mixed Stock Share the Advance of a Brisk Trade—The News Wanted.

CHICAGO, Aug. 8.—You may say that the Chicago market is active for horses. Without any special cause, the recent dullness started in actively last week, and prices ranged from 20 to 30 per cent in advance of previous sales, closing Saturday: 1,600 lb. draft, \$150 to \$230; 1,400 lb. chunks, \$140 to \$160; 1,400 express, \$170 to \$200; 1,250 chunks, \$125 to \$175; stoockers and extra drivers in demand at from \$100 to \$300 per head, according to conditions.

Receipts of cattle during the week fell far below the estimates, being less than half the arrivals of the corresponding week. With the usual demand and such limited supply a mild advance would have resulted, but orders for all classes of cattle were on a limited scale and the trade was only moderately active at an average advance of 10@15c. Heavy cattle were not even readily salable at that advance, the demand being very light, but the good, light and medium weight steers went off briskly and the supply was cleared at an early hour daily. Cows and mixed stock shared the advance of 10@15c, the trade ruling quite brisk at that advance. Range cattle composed half the supply, there being 2,000 westerns and 3,000 Texans on sale. Both branches of the trade were active at the general advance.

HYPOCRISY OF PUBLIC MEN.

The Billion Dollar Congress and Its Counterfeit Counterpart.

The present democratic house of representatives, with about 140 democratic majority, contrasts very unfavorably with the last house of representatives, with the republican majority, in the "billion dollar congress." The billion dollar congress was controlled by men who had brains and plenty of horse sense and it gave the people full value for their money. While it spent only about one billion dollars, it was worth at least ten billion to the people. The McKinley tariff bill alone will save the people ten times as much money as the billion dollar congress appropriated, while the billion dollars went where it would do the most good, in improving rivers and harbors, erecting public buildings, building war ships and fortifications, and in hundreds of useful ways all laudable and necessary, and the money was put in circulation among the people, where it belongs, which is far better than keeping it locked up in the treasury, as the democrats have boasted they would do, but have failed to keep their promise.

After making as large appropriations, or larger than the republicans did, and we have no fault to find with them for this, only because of their demagoguery and false promises; they have tried to cover up their tracks, and make a false showing of economy by filibustering during the last week or ten days against the \$5,000,000 for the world's fair. This is all humbug, they intend to pass the bill finally, either before the present session closes or after the presidential election next fall; and are trying to get votes under false pretenses. It is very little better than a confidence game by which sharpers swindle honest, but credulous people out of their money. Such hypocrisy in public servants is disgraceful and ought to be rebuked by the people. The democrats are not entitled to any credit for their conduct in this matter but deserve the severest censure. This big democratic majority has blown long and loud about being a cheap affair, but it is dear at any price.—Eugene Journal.

Let Us Join.

Glacier. The Dalles is preparing to make an exhibit at the Portland exposition of Wasco county products. Hood River should join in the good work and see that the display is, as usual, superior to that of any other county in the state. It can easily be done.

THE DALLES POISONING.

A Statement from Coroner Eastwood, of Wasco County.

From the Oregonian.
I see an article in to-day's Oregonian in which Dr. Otto S. Binswanger expresses his opinion rather freely concerning the poisoning of Mrs. Matilda C. Rogers, of this place. It occurs to me that the doctor, in expressing himself upon a few fragmentary portions of the report sent by some one to the Oregonian, which does not purport to give the evidence in the case at all. It would seem, therefore, that an opinion based on such a report must necessarily be worth far less than that of the chemist who analyzed the stomach of the deceased, and his judgment as to the merits of the case far more likely to be wrong than that of the justice, who heard all of the testimony and the arguments in the case. It appears to me that one with the information that was before the doctor is a little presumptuous in thus criticizing others who are in a far better situation to understand the case than he is.

I think the facts will show that he is laboring under mistaken ideas throughout the case. He says the statement "either sulphate of zinc or chloride of zinc after the analysis is made is worthless. The examination must show with absolute certainty which one of the two was contained in the stomach." Does the doctor know that a quart of embalming fluid was injected into the stomach, and two and a half quarts more were injected into the abdominal cavity around the viscera, and that this fluid contained large quantities of both sulphuric and hydrochloric acid? If not then he does not understand the case and should not be venturing his opinion upon it. Can the doctor tell under these circumstances in which form the poison entered the stomach?

Again, he says that the report says that Mrs. Rogers died "suddenly" and that neither of these poisons will kill suddenly. Again he does not understand the case. Mrs. Rogers was sick from Sunday until Thursday morning. Does this give the poisons time to produce death? If so, then there is nothing in his argument to the effect that death cannot be attributed to either of these poisons. Again he says: "It is very doubtful that after a body has been buried for one or two weeks, even if it was embalmed in the ordinary way, it would show yet distinct inflammation of the stomach and intestines. In order to carry some weight such a statement must come from a physician and not from a chemist, whose knowledge of pathology is at best very rudimentary."

The three physicians who removed the stomach and intestines have all testified that the same were in a good state of preservation, while one of the chemists who made the analysis was also a physician and testified to the evidences of inflammation. So it seems that the doctor is laboring under a misconception of the case throughout. I am informed that he was consulted in regard to making this analysis, but the job, for some reason, was given to other parties. Perhaps this fact accounts for his interest in the case and possibly dreams of a corroborative analysis may have enlisted some of the sympathies he expresses. Let the proper officers try this case as the law makes it their duty to do. That they will discharge this duty to a conscientious manner no one doubts, and the defendant stands in no danger of being convicted on insufficient testimony.
N. M. Eastwood,
Coroner of Wasco county.

The Climate, of Course.

For more years than small boys can remember, our worthy friend A. J. Dufur, jr., of Fifteen-mile, has been the "fore" and generally spoils the season by getting his arms or legs broken, or otherwise stopping the "machine." But this year is an exception. We met him on the streets Saturday, hale and hearty, and sound as a dollar, and as he says, "able to do more work and eat more grub than any other man." The climate is responsible, of course.

Didn't Fancy the Change.

Press-Times. Private Iams has started to sue his late officers for making him play thumbs-up and shaving his head. Iams thinks he came too darn near being Iwas.

MARS' STEPS TURNS.

Nearest to the Earth Yesterday the Planet now Moves off.

A PEEP THROUGH SCOPE AT HIM.

Fifteen Years Before he Again Closely Visits Mother Earth.

PHOTOGRAPHING THE PLANET.

A Dot Like a Pin Head is First Secured, Then Magnified—Difficulties in the Way.

CHICAGO, Aug. 8.—Mars ended his mad race toward the earth at noon yesterday. He stopped just 35,100,000 miles away in space, and in about a month will be swinging along in its orbit, 40,000,000 miles away, the same as usual. More than this, it will be fifteen years before he will again burn his lamp so close to the face of Mother Earth. July 12th the planet attracted the attention of the world by dodging behind the moon and announcing that he was on his way toward the earth at a lively pace. Astronomers have taken advantage of his proximity to study his features with their big telescopes, and the professors at Kedwood observatory, on 46th street, in this city, have been very busy. Last night, Prof. Duwalt, who has charge during the absence of Prof. Hale, lectured to a second class on the subject. The big telescope in the center being the feature of attraction. The professor spiced what he had to say about planets in general and Mars in particular by actual eye observations through the powerful glass by individual members of the audience. The study is no; all done by the naked eye, however. Here, as in sun spots, the spectroheliograph comes into use, and Prof. Hale's invention for photographing the sun is used in catching minute glimpses of the planet.

Mars takes a small picture, not so large as a pinhead, and from this minute dot another photographic instrument magnifies it until the picture is as large around as the end of a lead pencil. There is little to be seen, however, outside the snow caps which crown each end, the north a little heavier than the south. It is not an easy matter to get a photograph of any heavenly body, especially one so infinitesimally small as the negative of Mars, for the earth is spinning around at a lively rate, and the subject, too, is not standing still. It is necessary to make a ten-second exposure, and the finely adjusted clockwork that counteracts the revolution of the earth on its axis, by tilting the telescope around and keeping it pointed at the object, does not always keep up the procession. As an occasional result there is a spoiled negative. A filmy cloud may float over the mouth of the big telescope and Mars will look like a dot under a thick veil. A breath of air may move the telescope; the jar of a passing vehicle or even the vibrations of a large bell will mar the perfectness of the negative when all other circumstances are favorable. Seventeen years ago the life theory was strongly advocated by Prof. Mercator, who figured out a chart with canals, lakes and seas. The late observations from the Lick observatory are said to throw some doubt on this theory, and astronomers are expecting interesting discoveries from the Rocky mountains.

City taxes for 1892 are now due and payable within sixty days, at the office of the undersigned.
